Graduate Education at Washington State University

Washington State University, the State of Washington's land-grant institution, was founded in 1890. The first class of 21 students enrolled on January 13, 1892. Since that time, the University has grown steadily in size and diversity. It now includes 11 colleges and a graduate school, with a total enrollment for all campus locations of over 20,000. The main campus of nearly 600 acres, located at Pullman in the Palouse country of southeastern Washington, encompasses one of the largest residential universities west of the Mississippi. More than 80 percent of all students live on or near campus. In addition to the main campus, Washington State University offers courses of study at three regional campuses located in Spokane, Tri-Cities (Richland), and Vancouver. In addition, the University maintains over 5,000 acres of farmland and eight agricultural research centers located at various points in the state.

Washington State University offers more than 70 degree programs. Permanent tenure-track faculty number over 1,000 and approximately 70 percent of all full-time graduate students hold positions as teaching, research, and/or staff assistants.

The Dean of the Graduate School administers the diverse graduate programs throughout the University, but the faculty are primarily responsible for directing graduate education. The Graduate Studies Committee of the Faculty Senate, composed of faculty members and graduate students, assists the Graduate School in the establishment of the policies and procedures of the Graduate School.

The Graduate School is committed to helping graduate students become learned scholars, effective researchers, and masters of disciplinary and interdisciplinary knowledge. WSU faculty emphasize both independent scholarship, research, and classroom learning. State-of-the-art equipment is present in the research centers and academic departments to help students conduct their research. Close research collaboration between students and faculty helps to create an atmosphere that stimulates intellectual curiosity. The individualized nature of graduate education at Washington State University also provides student with considerable flexibility in designing programs of study, and broadens the possibilities for unique creative endeavors.

The Graduate School may be contacted at:

Admission and Registration

Admission

General Information

Admission to Washington State University is granted without regard to age, sex, race, religion, color, creed, disability, national or ethnic origin, sexual orientation, or marital status. Graduates of Washington State University and other colleges and universities whose degrees are recognized by this institution and who meet the requirements for admission to the Graduate School may be admitted. Inquiries and requests for information may be found at gradschool.wsu.edu, or you may write the Graduate School at: The Graduate School, Washington State University, Pullman, WA 99164-1030. You can also contact Graduate School Admissions at 509-335-1446.

Applicants for admission must have or anticipate receiving a bachelor's degree from an accredited school before the start of the semester for which they have applied to the Graduate School. Previous schools must be accredited by a recognized accreditation association. Applicants must have a 3.0 grade point average of graded undergraduate coursework, or from graded graduate coursework where there are 12 or more graded semester hours of graduate coursework taken after the bachelor's degree.

Applicants must have official transcripts from colleges or universities from which any degrees have been granted or are expected, and those transcripts which show the last 60 graded semester or 90 graded quarter hours of undergraduate work. Transcripts are also required from colleges or universities showing graded graduate level coursework taken after the bachelor's degree. Official transcripts are those mailed directly to the Graduate School from the Registrar of the institution attended. Transcripts mailed by the student are not considered official. Complete credentials should be on file at least one month before registration. Transcripts from other institutions cannot be returned. Records of previous work at Washington State University need not be submitted.

The Dean of the Graduate School may approve admission of a student from a foreign university if the student presents a superior academic record, satisfactory evidence of adequate ability in English, and has sufficient financial resources. Such applications should be completed at least six months in advance of the proposed date of enrollment in the Graduate School. International students who have taken graduate courses at other institutions will be accepted only after evaluation of their undergraduate records, and their performance in graduate study and the minimum criteria, described above, is met.

In a graduate program, a student is required to complete appropriate advanced courses to participate in seminars and to make an original contribution of knowledge. At least one academic year of graduate study, or the equivalent, is necessary for the completion of a program leading to a master's degree. The residence requirement for the master's degree is one academic year.

Most advanced degree programs emphasize the preparation of students for careers as productive scholars with research accomplishments. Those who earn advanced degrees often become teachers in institutions of learning, so many departments provide special attention to preparing students for careers in the teaching profession.

Departmental approval is required for any admission regardless of grade point average, and departments may require higher levels of performance than those cited. Because of limitations within certain departments, it may be necessary to deny admission to some qualified applicants. Graduate students are subject to the usual procedures and regulations of the institution and to the Graduate School rules and procedures outlined in the *Graduate School Policies and Procedures Manual*.

Enrollment Requirements

The normal load for a graduate student is 10-18 credit hours per semester (6-8 hours in an eight-week summer session). Graduate students on half-time teaching or research assistantships are expected to carry 10-18 credits per semester with no more than 12 hours of graded credit (3-6 in an eight-week summer session). See the *Graduate School Policies and Procedures Manual* for requirements for graduate students on appointment or taking examinations.

Classification of Students

Regular Student Status

Applicants with at least a B (3.00 on a 4.00 scale) grade point average, or the equivalent in the last 60 graded semester (90 quarter) hours, from a recognized college or university; or at least a B grade point average in any graduate work from a recognized graduate school are eligible for admission to regular student status. Applicants with at least 12 semester hours of approved coursework from recognized graduate schools with at least a B grade point average are eligible for admission to regular student status.

Provisional Student Status

A student not eligible for regular student status may be admitted on provisional student status upon special recommendation of the chair of the major department and with approval of the Associate Dean of the Graduate School.

Registration

Instructions for registration and policies and procedures for dropping and adding classes are included in the time schedule of classes available on the Registrar's Office homepage at www.registrar.wsu.edu.

Full-time Students

Graduate students must register for a minimum of 10 credit hours to maintain full-time enrollment status in the fall and spring semesters. All full-time graduate students must register for at least one (1) 700 (Master's), 702 (non-thesis Master's), or 800 (doctoral) level research credit each semester. Students should check with their departments for additional information and/or exceptions to this policy.

Part-time Students

Graduate students must register for a minimum of 2 credit hours and no more than 9 credit hours to maintain part-time enrollment status in the fall and spring semesters.

Continuous Enrollment

All full- and part-time degree-seeking graduate students at all campus locations must maintain continuous enrollment in the Graduate School by registering for each semester, excluding summer sessions, from the time of first enrollment until all requirements for the degree are completed. Continuous enrollment is maintained by registering for a minimum of 2 graduate credits per semester (excluding the summer). International students who enroll for fewer than 10 credits must be approved by the Office of International Programs in consultation with the Graduate School, prior to part-time enrollment during the academic year. Exceptions to the continuous enrollment policy are noted in Chapter 5 of the Graduate School's Policies and Procedures Manual. Continuous doctoral status meets the continuous enrollment requirement.

Exceptions to Continuous Enrollment

Typically, degree-seeking graduate students enroll in credits every semester until degree completion. However, sometimes circumstances are such that degree-seeking students are unable to enroll for credits. Such circumstances may include illness, family issues, financial need, work, or other obligations.

The exceptions to continuous enrollment discussed in this section address circumstances in which a degree-seeking

student must be away from campus and cannot enroll for credits. These students must complete the appropriate graduate leave or internship leave paperwork, obtain approval from their faculty advisor and program chair, and submit the paperwork to the Graduate School in advance of the semester they will be away. Official leave of absence, internship leave status, and absences not approved under this policy are included in the time limits to complete a degree.

Graduate Leave of Absence

Students who must be away from campus for reasons such as medical issues, family obligations, job obligations, military service, and Peace Corps service, and who cannot maintain continuous enrollment in any given semester, may apply for an official graduate leave of absence. See the Graduate School's Policies and Procedures Manual, Chapter 5, for additional information and procedures. Only graduate leave for medical reasons (EFML), military service, and Peace Corps service is available to doctoral students in continuous doctoral status. Students who are approved for graduate leave while in continuous doctoral status will not be charged the \$50 administrative fee.

Internship Leave

Students who wish to go on an internship approved by their program and who do not need to register for credits for the internship may apply for internship leave status. See the Graduate School's Policies and Procedures Manual, Chapter 5, for information and procedures. Only internship leave required by the student's program is available to doctoral students in continuous doctoral status. Students who are approved for internship leave while in continuous doctoral status will not be charged the \$50 administrative fee.

Short-term Parental Leave

The Short-term Parental Leave plan provides up to four consecutive weeks of leave for the period directly before or after the birth or adoption of a child. During this time, the student continues to be enrolled and, if on an assistantship appointment, will continue to receive graduate assistant benefits (i.e., tuition waivers will remain in place, health benefits, and salary). For additional information, see the Graduate School's Policies and Procedures Manual, Chapter 5.

Other Policies and Procedures

Special Projects or Independent Study (600), Master's Research, Thesis and/or Examination (700), Master's Special Problems, Directed Study, and/or Examination (702), and Doctoral Research, Dissertation, and/or Examination (800) shall have as a pre-requisite regular or provisional student status in the Graduate School.

Graduate students must register for the required amount of 700, 702, or 800 credits during the semester or summer session in which they take their final examination. Fall and spring semesters and summer session officially end on the last day of finals week. Examinations normally are not scheduled between regular terms. However, students who

have received special permission from the Graduate School to schedule final master's or doctoral oral examinations in the interim non-class period after the end of a term will be required to register for the following semester or summer session.

Academic Regulations

Scholarship Standards

A student must earn a 3.00 grade point average for all course work (including all courses listed on the program and other graduate upper- and lower-division courses). No work of C grade or less may be dropped from a program, nor can a course be repeated for a higher grade if the final grade is C or higher. Any course listed on the program in which a grade of C-, D, or F is earned must be repeated.

Any graduate student who fails to maintain a cumulative grade point average of 3.00 or higher for all coursework subsequent to admission to the Graduate School will be dropped from the University. A student who is dropped may be permitted to re-enroll if the chair of the major department makes a special recommendation with the concurrence of the Dean of the Graduate School.

Requirements for a Graduate Degree

The graduation requirements of the Graduate School (as published in the Graduate School Policies and Procedures Manual) in effect at the time of the student's initial admission as a regular or provisional graduate student must be met for completion of a graduate degree program. Subsequent changes in degree requirements of the Graduate School or departmental may be substituted at the option of the student upon approval by the master's or doctoral committee, by the department chair, and by the dean of the Graduate School. If a student is dropped from the University for failure to maintain continuous enrollment, the graduation requirements of the Graduate School are those in effect at the time of readmission.

The time limit for the use of graduate credits toward a master's degree is six years from the beginning date of the earliest course applied toward the degree. Each program for a doctoral degree is considered individually. In all cases, work for the degree must be completed within three years of the date of the satisfactory completion of the preliminary examination. At least four months must elapse between preliminary and final examinations for doctoral degrees.

Transfer Credit and Credit Restrictions

Detailed policies and procedures on transfer credit and credit restrictions are outlined in the Graduate School Policies and Procedures Manual.

Transfer of Graduate Credits

Appropriate credits (with a grade of B or higher) earned in other accredited graduate schools may be applied to a limited extent toward an advanced degree. No extension credits from other institutions, or work done by correspondence with this or any other institution, or credit earned by special examination may be used to meet advanced degree requirements.

Graduate Study by Seniors

Seniors who have at least a 3.00 grade point average in the last half of their undergraduate work at Washington State University may register for up to six semester hours of work in the Graduate School in excess of the number of hours required to complete the bachelor's degree. Graduate School approval is required at the time of registration. Only grades of "B" or higher may be applied toward an advanced degree. Seniors who wish to enroll in 500-level courses for undergraduate credit must obtain approval of the major advisor and the chair of the department of program in which the course is offered.

Tuition and Fees

Tax revenue from the state finances a portion of the facilities and operations of the instructional programs, student services, and related activities. Graduate students share in the cost by paying tuition, fees, and other charges as established by the Board of Regents.

Tuition, fees, and other charges are subject to change, and are effective when established by the Legislature of the State of Washington and adopted by the WSU Board of Regents. For the most up-to-date rates, visit <http://finaid.wsu.edu/college-costs/cost-of-attendance/>. Part-time students appointed to graduate assistantships may receive waivers of tuition (see the Assistantship, Fellowship, and Traineeships section).

Payment of registration fees is due on or before the fifth Friday of class. Receipt of payment after that day will result in a 5% late payment fee. Any tuition balances not paid by the eighth Friday of class will receive another 10% late payment fee.

On the Pullman Campus, fees for the Student Health Center, the Student Recreation Center, and Pullman Transit are charged each semester. (NOTE: Graduate students appointed to half-time graduate assistantships qualify for medical insurance coverage. See Assistantships, Fellowships, and

Traineeships section for more information). Other fees, including parking permits and health insurance are optional.

NOTE: Overdue accounts owed to the University will prevent release of transcripts and enrollment. Registration is not complete until all of the student's tuition and fees are paid.

Student Financial Aid Programs

Graduate students wishing to apply for financial aid must complete the Free Application for Federal Student Aid (FAFSA). The FAFSA priority processing date is March 1. Students may apply online at www.fafsa.ed.gov, or pick up a paper version at any local high school, community college, public library, or the Washington State University Office of Student Financial Aid and Scholarship Services (OSFA/OSS), Room 380 Lighty Student Services Building.

Graduate students are considered for the following programs: Federal Family Educational Loans (subsidized and unsubsidized Stafford loans) and Federal or State Work Study Programs. Work Study Program funds may be used toward funding graduate assistantships. The Office of Student Financial Aid determines student eligibility for these programs and will notify students in a letter of eligibility. Financial aid counselors are available to assist students and families with their financial aid concerns at 509-335-9711. You will also find information at: wsu.edu/studacct/finaid.htm.

Each academic year a number of graduate students at WSU are awarded a graduate assistantship from their departments. The assistantship usually covers the majority of tuition costs. This Operating Fee Waiver is considered a resource when the OSFA determines the student's eligibility for other financial aid programs. In order to ensure your Financial Aid Award Notification is correct, please notify the OSFA if your department has granted you an Operating Fee Waiver. If the OSFA is notified after the first disbursement of your loan, any subsequent disbursement may be reduced accordingly.

NOTE: All graduate awards are initially based on resident tuition costs, regardless of resident status. You may request (in writing) an adjustment for nonresident tuition costs. If you have unmet need on your Financial Aid Award Notification and/or the Cost of Attendance has not been met, you may qualify to borrow an Alternative Loan. Contact the OSFA for more information. Short-term loans may be available to students who encounter delays in their financial aid delivery through the OSFA.

Satisfactory Academic Progress (SAP) Policies

To receive and continue to be eligible to receive financial aid, graduate students must be in good standing with their department and the Graduate School. The maximum timeframe calculation is based on all semesters of enrollment regardless of whether or not financial aid was

received each semester. Semesters in which enrollment is less than 10 hours will be counted as one-half of a full-time semester. The maximum timeframe for financial aid (exclusive of graduate assistance) is three years (6 full-time semesters) for master's degree candidates; three years (6 full-time semesters) for doctoral degree candidates who have a previous master's degree; six years (12 full-time semesters) for doctoral candidates without a master's degree; and five years (10 full-time semesters) for professional students and veterinary medicine students.

Assistantships, Fellowships and Traineeships

Teaching and research assistantships are available in most departments offering advanced degrees, and nonservice research fellowships and traineeships are granted in some departments. Ordinarily, graduate appointments are limited to those who pursue programs of study leading to advanced degrees at Washington State University.

The Graduate School Policies and Procedures Manual should be consulted concerning qualifications, eligibility, and application procedures. As most appointments for fall semester are made by April 1, or as soon thereafter as possible, it is desirable to have applications completed by February 1; nonservice appointment applications should be completed by January 1. Spring semester applications should be completed by September 1. Applications received at a later date can be considered only for positions still available. Assistantship appointments require part-time service. The term of a graduate appointment may be for a nine-month period, a semester, or a summer. Students on appointment must maintain regular enrollment in the Graduate School (10 credit hours or more during the academic year; 3 credit hours during summer session) for the duration of their appointments. Stipends vary according to the amount of required service, the extent of the student's training, and merit factors (e.g., academic record, experience). Contact the Graduate School Office for salary information.

Graduate students who are not residents of the State of Washington, appointed to assistantships of one-half time service (20 hours per week) or more by the Board of Regents, and who reside in the State of Washington while attending WSU, may receive a waiver of the nonresident portion of the tuition. (NOTE: Nonresident tuition waivers cannot be assured beyond the first year of graduate

students' assistantships. Students who intend to remain in the state are encouraged to review Washington statutes and associated administrative rules governing the establishment of residency for tuition purposes. These may be obtained from the Office of Student Affairs, the Graduate School, or at:

gradschool.wsu.edu/FutureStudents/StudentLife/Residency.aspx.

The residency operating fee may also be waived for resident students who hold half-time (or greater) service appointments (20 hours per week) and who qualify based on merit factors, and for nonresident students who reside in Washington state, who hold half-time graduate service appointments, and who qualify based on merit factors. Further, graduate students who hold half-time (or greater) service appointments automatically qualify for and receive medical insurance coverage.

All students on assistantships pay the general tuition and activities fees. (Please note: to be eligible for any waiver, a student must be physically living in the State of Washington).

Forms for assistantship or fellowship applications are included as part of the general application for admission to Graduate School. For information about special scholarships and fellowships, write to the dean of the Graduate School or the chair of the department concerned.

Resolution regarding Scholars, Fellows, Trainees, Assistants

Acceptance of an offer of financial support (such as a graduate scholarship, fellowship, traineeship, or assistantship) for the next academic year by a prospective or enrolled graduate student completes an agreement that both student and graduate school expect to honor. In that context, the conditions affecting such offers and their acceptance must be defined carefully and understood by all parties. Students are under no obligation to respond to offers of financial support prior to April 15; earlier deadlines for acceptance of such offers violate the intent of this Resolution. In those instances in which a student accepts an offer before April 15, and subsequently desires to withdraw that acceptance, the student may submit in writing a resignation of the appointment at any time through April 15. However, an acceptance given or left in force after April 15 commits the student to not accept another offer without first obtaining a written release from the institution to which the commitment has been made. Similarly, an offer by an institution after April 15 is conditional on presentation by the student of the written release from any previously accepted offer. It is further agreed by the institutions and organizations subscribing to the above Resolution that a copy of this Resolution should accompany every scholarship, fellowship, traineeship, and assistantship offer.

WSU Campuses

Global Campus

Our technology-based Global Campus is located wherever there's an Internet connection, helping WSU deliver premier educational, research, and training opportunities worldwide. Offering online degree programs including virtual career fairs, certificate courses for working professionals, and a wide variety of free interactive seminars for students, WSU's Global Campus reaches out to students in unprecedented ways.

Graduate Programs at Regional Campuses

With the creation of WSU's multi-campus system in July 1989, select graduate programs are offered at the University's regional campuses in Spokane, Tri-Cities, and Vancouver. Expansion of offerings will continue as the campuses grow. Graduate students who plan to use coursework and research undertaken through the regional campuses must be admitted to the Graduate School on the Pullman campus. Requirements are generally the same.

WSU Spokane

Riverpoint Campus in east Spokane is our urban health sciences campus, preparing the state's future generations of doctors, nurses, pharmacists, and other health professionals, and conducting world-class research that leads to healthier people and communities. WSU Spokane offers master's degrees in criminal justice, education, health policy and administration, nursing, nutrition and exercise physiology, speech and hearing sciences, and teaching. WSU Spokane offers doctoral degrees in criminal justice, education, nursing, nutrition and exercise physiology, and pharmacy, and medical sciences. Certificate programs include field-based principal, field-based superintendent, nursing, program administrator, and teaching. Portions of some programs are completed at the WSU Pullman campus.

Students benefit from the metropolitan context and urban amenities of Spokane. The full range of academic and student services are available, including the Cooperative Academic Library Service (CALs) shared by students of WSU Spokane and Eastern Washington University. WSU Spokane also has exclusive research and public service programs with access to community resources for collaborative research and internship opportunities for students. For specific information, contact

WSU Spokane Student Services
Health Sciences Building 125E

WSU Tri-Cities

WSU Tri-Cities offers master's degree programs in biology, business administration, chemistry, computer science, education, electrical engineering, environmental engineering, environmental science, nursing, and mechanical engineering. Supporting coursework is available in mathematics and physics. The present facilities provide classrooms, offices, laboratories, networked computing, and an extensive library. Research is carried on in a wide variety of areas. Additional opportunities are available to share research laboratories and equipment of nearby US Department of Energy contractors through individual arrangements. Graduate assistantships are available in certain departments for qualified students who wish to pursue study and research at WSU Tri-Cities. For specific information about courses, programs, facilities, or admission, contact

WSU Tri-Cities:
2710 University Drive
Richland, WA 99354-1643
509-372-7250

www.tricity.wsu.edu

WSU Vancouver

WSU Vancouver is located on a 351-acre campus in Salmon Creek, where students enjoy small classes and schedules designed for place-bound students balancing their education with career and family responsibilities. Master's degrees offered include business administration, education, environmental science, history, nursing, and public affairs. For more information contact

WSU Vancouver Office
360-546-9779,
admissions@vancouver.wsu.edu,
vancouver.wsu.edu

Graduate Certificate Programs

Graduate certificates are designed to provide students graduate education in a specific area of study. While the requirements for each graduate certificate vary among departments and programs, the core is typically 9 to 12 credits of graded coursework taken at the graduate level. These core courses are generally selected to provide the student with expertise on a specific topic. In order to determine the applicability of any credits earned while a certificate student, the student must file a Program of Study as part of the admission material. The determination of applicable coursework will be made by the academic department or graduate program at the time of admission. Graduate certificates that are currently offered at Washington

Regional Programs

Washington State University and the University of Idaho have developed a program of cooperative courses in which one institution offers exclusively a particular course for use by graduate students of both universities. The program provides a wider variety of graduate courses than otherwise would be possible at either university. This arrangement permits graduate students at Washington State University to take cooperative courses at the University of Idaho on the same basis that they take resident courses. No special fees are charged for these courses, but they do appear on the WSU transcript as cooperative transfer coursework, which does not impact the student's GPA. In each cooperative class, the regulations of the host institution prevail, but only the institution in which the student is seeking an advanced degree records official enrollment and grades.

The cooperative program is limited to specific courses. Courses outside of the cooperative program taken at the University of Idaho must be presented as transfer courses with the usual rules and fees applying. For further information, consult the chair of the department or program or the Office of the Dean of the Graduate School.

Western Regional Graduate Programs – WICHE

The Western Interstate Commission for Higher Education (WICHE) coordinates a program involving 17 graduate institutions where students who are residents of Alaska, Arizona, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, North Dakota, Oregon, South Dakota, Utah, Washington, and Wyoming may attend Graduate School in Washington. WICHE students pay resident tuition and receive some admission preference. For more information about your program, visit wiche.edu/sep/wrgp. Washington State University receives students in the following programs:

American Studies (M.A. and Ph.D.)
Anthropology-Archaeology Option (M.A. and Ph.D.)
English - Rhetoric and Composition Emphasis (M.A. and Ph.D.)
Food Science (M.S. and Ph.D.)
Health Policy and Administration (M.H.P.A.)
History-Public History Option (M.A. and Ph.D.)
Neuroscience Interdisciplinary (M.S. and Ph.D.)
Nutrition (Ph.D.)

Student Services

Libraries

The Libraries system is an integral part of WSU's educational resources. The Libraries' collection contains more than seven million items including about two million volumes and 28,000 serial publications (scientific, scholarly, and specialized journals and periodicals); regional and national newspapers; foreign, federal, state, and municipal documents; United Nations publications; and other materials in a variety of print, electronic, multimedia, and micro formats.

The Libraries' online catalog, Griffin, provides access to information on books, journals, documents, media materials, and select electronic resources. Summit, a joint catalog that WSU shares with 33 academic

Libraries in Washington and Oregon, provides an online requesting service for book delivery at participating campuses.

The Libraries provide Internet access to a wide variety of electronic indexes and abstracts, as well as thousands of full-text electronic journals and books. Librarians provide personal assistance and online and email reference to users of these traditional and electronic collections, and provide access to materials from other libraries.

Holland/Terrell Library, the largest of six Pullman-campus libraries, provides extensive collections in the social sciences, business, fine arts, and the humanities, as well as sophisticated service components designed to assist students, faculty, and researchers. Manuscripts, Archives, and Special Collections contain rich collections of primary source materials including books, manuscripts, maps, photographs, and digital collections to support study and research in a number of fields, including Pacific Northwest history, modern British literature, regional publishing, veterinary history, agricultural history, wildlife and outdoor recreation, WSU history, and other subjects. Media Materials & Reserves houses course reserves, equipment, CDs, DVDs, videotapes, films, slides, audio tapes and other media for classroom instruction and for personal checkout. Special media collections include the WSU-UI Regional Media Collection, the McCaw Classic Feature Films, Gnaedinger Historical Films, Pitzer Classic Radio Tapes, and others.

The **Owen Science and Engineering Library** supports study and research in the pure and applied sciences with substantial traditional and electronic collections in these disciplines. The Owen Library's wireless commons has workstations, high speed Internet connections, hotwired carrels, a reference/info center, and collaborative learning areas.

The collections of the **George W. Fischer Agricultural Science Library** located in Wegner Hall primarily support the instructional and research needs of the College of Veterinary Medicine and the College of Pharmacy.

The **George B. Brian Education Library** in Cleveland Hall offers a wide range of materials and services to meet research and instructional needs from preschool through higher education and adult education.

The **Architecture Library**, which supports programs in the School of Architecture, is located in Carpenter Hall. In addition, library facilities and services are available at the Spokane, Tri-Cities, and Vancouver regional campuses, and at the Intercollegiate College of Nursing (Spokane) and the WSU Energy Library (Olympia). Library services for students enrolled in the Global Campus, or other distance learning programs are available via toll-free telephone, email, and/or web-based services. The WSU Libraries are open throughout the year, although hours vary during intersessions and holidays. Visit wsulibs.wsu.edu for detailed information on library resources, services and hours.

Computing Services/Information Technology

infotech.wsu.edu

The Information Technology Help Desk assists students with wireless setup, passwords, setting up email, and other computer and Internet issues. The WSU community is welcome to take advantage of a collection of free software and also order items at an educational discount through the Tech Store. Visit the website for detailed information and answers to your questions. The IT Help Desk is located in the CUE Room 302. 509-335-4357

Museums and Collections

The **Minnie Barstow Drucker Memorial Collection** of Oriental art is maintained by the Department of Apparel, Merchandising, Design, and Textiles. The Drucker Collection consists of Oriental furniture, accessories, art, textiles, and costumes. The collection was given to the University in 1944 by the late Arthur Eilert Drucker in memory of his wife. The Chinese, Korean, and Japanese artifacts were collected during the years the Druckers made the Orient their home. The collection is in storage in the Holland Library. For more

information contact the Department of Apparel, Merchandising, Design, and Textiles at 509-335-3823.

The **Historic Textiles and Costume Collection** contains approximately 4,000 items of women's, children's, and men's clothing and costume accessories from 1935 to the present, as well as quilts and woven coverlets. It also contains a limited number of ethnic textiles and costumes from around the world. The collection is housed in Kruegel Hall. Contact the Department of Apparel, Merchandising, Design, and Textiles at 509-335-3823.

The **Maurice T. James Entomological Collection** houses one of the largest insect collections in the Pacific Northwest with over 1.5 million insect specimens and an extensive working library. Primarily of regional significance, the collection includes considerable material for the New World topics, eastern North America, and Europe. The collection functions essentially as a research facility by providing specimens on loan to recognized scientists worldwide, by offering identification services to University extension entomologists, and by serving as a repository of type specimens and other materials. The collection room is located in the Food Science and Human Nutrition building, Room 157. Contact Dr. Richard Zack at 509-335-3394 to arrange a tour and presentation.

The **Mycological Herbarium** was founded by Frederick D. Heald, the first chair of the Department of Plant Pathology, in 1915. It now contains more than 70,000 specimens of fungi. Loans are freely available to individuals associated with recognized botanical institutions anywhere in the world. The Herbarium is maintained by the Department of Plant Pathology and is located on the third floor of Johnson Hall. Specialists wishing to utilize the facilities are welcome and are asked only to inform the Department of Plant Pathology in advance. 509-335-9541

The **Henry W. Smith Soil Monolith Collection** contains more than 150 preserved soil profiles, presenting soils from all of the geographic regions in the state of Washington and nine of the eleven soil Orders in Soil Taxonomy. Soils that are particularly well represented in the collection are those of the Palouse region and those from eastern and central Washington that contain layers of volcanic ash from the many prehistoric and historic eruptions of volcanoes in the Cascade Region. The collection is the work of Dr. Henry W. Smith, Emeritus Professor of Soils at Washington State University. The soil monoliths constitute a very valuable resource for both teaching and research within the Department of Crop and Soil Sciences. The collection is located in Johnson Hall 114, and may be viewed from an observation window any time the building is open. Persons interested in touring the collection should contact Dr. Alan Busacca at 509-335-1859.

Permanent exhibits in the **Museum of Anthropology** include topics in human biological and cultural evolution and the

culture of the native people of the Columbian Plateau. The museum houses archaeological collections from the interior Northwest that represent a record of the last 11,000 years of human occupation. This is the most extensive collection of archaeological materials from the Columbian Plateau, an important research resource for those interested in this region's archaeological history. Research collections representing faculty archaeological research in the Southwestern U.S. are also maintained. In addition, there are important collections of historic period Native American basketry from several parts of western North America.

The **Charles R. Conner Museum**, located in Abelson Hall, exhibits fish, amphibians, reptiles, and several hundred mounted birds and mammals, including deer, antelope, mountain sheep, mountain goat, cougar, and small species. The display collection is open to the public from 8:00 a.m.-5:00 pm weekdays.

The **Culver Display**, located in Webster, houses the Jacklin Petrified Wood Collection. This collection contains more than 2,000 cut and polished specimens of petrified wood from all major localities in the western United States and is the largest display of its kind in the western United States. Also included in the Collection is a large selection of cut and polished agate, geodes, and dinosaur bone. The Culver Collection includes over 100 classic rock and mineral specimens from localities throughout the world. Both the Jacklin and Culver Collections may be viewed weekdays, 8:00 a.m.-5:00 pm. Tours may be arranged by calling the Department of Geology, 509-335-3009.

The **Marion Ownbey Herbarium** is an internationally recognized resource for research, teaching, and service. The Herbarium houses 300,000 plant specimens, primarily from the Pacific Northwest, but including worldwide collections. In addition to native vascular plants and weeds, the Herbarium contains mosses, liverworts, lichens, and special collections of seeds and cultivated plants. The Herbarium is located in Heald G-9 and is open weekdays from 8:00 a.m.-5:00 pm and by appointment 509-335-3250.

The **Worthman Veterinary Anatomy Teaching Museum** features several hundred specimens of mammals and several exhibits of fowl. The collection consists primarily of domesticated animals, since they represent the species most important to veterinary medical education and research, yet a few wild species are included also. The only one of its kind in the nation, the Museum offers a unique learning environment and is used extensively for teaching purposes in anatomy, radiology, and surgery classes, and serves as a reference tool for current research by veterinary medicine faculty members. The Museum is located on the second floor of Wegner Hall. For information, call 509-335-6621.

The **Museum of Art** was established in 1974 around a core collection of American paintings assembled by former President E.O. Holland and former WSU Regent Charles Orton. Dedicated to serving the educational purposes of WSU and the people of the state of Washington, the Museum operates a program that embraces a wide variety of changing exhibitions ranging from antiquity to the contemporary, from design and photography to sculpture and painting, by internationally, nationally, and regionally known artists. Many of the exhibits originated by the Museum staff have toured the nation. The Museum offers a wide variety of speakers, films, and special programs throughout the year. The Museum's programs are free and open to the public. For more information, call 509-335-1910.

Research Support Facilities

The **Office of the Campus Veterinarian (Laboratory Animal Resource Center)** is the central coordinating facility for the care, production, procurement, and use of laboratory animals at WSU. It provides assurance to governmental agencies, granting authorities, accrediting bodies, and the public that all animals utilized by WSU in teaching, research, and testing are cared for in a humane manner consistent with established federal and state guidelines. The Office also provides formal presentations, informal assistance, and educational services to assist instructors and investigators in their use of animals.

The **Center for Integrated Biotechnology (CIB)** is an organized research unit that has broadly defined biotechnology as the use of living organisms or their products to modify human health and the human environment. The applications of biotechnology are extensive and have already had critical impacts in agriculture, human health, and environmental protection. The CIB promotes multi-investigator research programs and the development of new and innovative advanced technologies, designed to enhance and increase the level of basic and applied research being done in the area of biotechnology at WSU. The Center also operates Core Laboratories that provide high-tech centralized services to members in areas such as bioinformatics, genomics and proteomics. These cores enhance faculty research capabilities and improve opportunities to compete for federal and industry research grants and contracts. For more information go to: biotechnology.wsu.edu/

WSU's **Office of Grant and Research Development (OGRD)** assists the university's faculty and graduate students in securing extramural support for their scholarly, research, teaching, and community service activities. OGRD promotes and facilitates the procurement of grant and contract funding through information dissemination and outreach, proposal and award processing. OGRD offers education and training for proposal development and writing classes throughout the

year. For more information please visit OGRD's website at: ogrd.wsu.edu.

Washington State University's **Office of Intellectual Property Administration** is the campus resource for patents and technology transfer. The office assists faculty researchers in applying for patents and transferring their technology to the public domain. Patents protect the rights of WSU and the inventors.

The **Nuclear Radiation Center** serves as an all-University resource unit, supporting research and graduate education related to nuclear engineering and physics, radiochemistry, elemental analysis, and neutron activation analysis.

The **Radiation Safety Office** administers a program providing for the safe use of radiation machines and radioactive materials in research, service, and instruction at the main campus, regional campuses, and extension centers. Program activities are conducted in accordance with the statutes and rules of radiation protection specified in WAC-246, and with the conditions enumerated in Radioactive Materials License WN-C003-1 issued by the State of Washington.

The **Office of Research Assurances** provides oversight and coordinates compliance efforts (as required by federal and state laws and University policies) primarily through close cooperation and coordination with the following faculty/Presidential Committees:

- Institutional Animal Care and Use Committee (IACUC)
- Institutional Biosafety Committee (IBC)
- Institutional Review Board (IRB)
- Radiation Safety Committee (RSC)

The **Research Compliance Office** offers support and help to researchers to identify, understand, and comply with all pertinent regulations, rules, and policies. The Office is a resource for facilitating the conduct of research at WSU.

The mission of the **Social and Economic Sciences Research Center** is to strengthen research in the social, economic, and behavioral sciences at Washington State University. This mission is pursued through a variety of activities including a computer-assisted telephone interview facility, mail survey capabilities, personal interviewing capabilities, assistance to faculty in the preparation and submission of research proposals for extramural funding, and efforts to stimulate and organize interdisciplinary research. Consultation is also provided to faculty, staff, students, and others on the development and implementation of research projects.

The **Water Research Center** is a cooperative venture by WSU and the University of Washington with input from other state research universities. The mission of the Center is to plan,

promote, conduct, and administer research in water resources; to educate and train scientists and engineers through participation in research projects; and to disseminate the results of completed research to users through publications, conferences, seminars, short courses, and symposia. The Center operates in consultation with state, federal, and private water-interested organizations.

Statistical Services is a statistical consulting service provided by the Department of Statistics for WSU faculty, staff, and student researchers. Assistance is provided in the design of experiments and sample surveys, analysis of data including use of statistical packages, and interpretation of results of statistical analysis.

Research Facilities

College of Agricultural, Human, and Natural Resource Sciences

CAHNRS research is conducted within Agricultural and Natural Resource Sciences; Animal Sciences; Apparel, Merchandising, Design and Textiles; Biological Systems Engineering; Crop and Soil Sciences; Entomology; Food Science and Human Nutrition; Horticulture and Landscape Architecture; Human Development; Interior Design; Plant Pathology; Natural Resource Sciences; Rural Sociology; and Statistics. The Institute of Biological Chemistry performs fundamental research in the biochemistry and molecular biology of plants.

CAHNRS also houses the Center for Precision Agriculture Systems, the Center for Nonthermal Processing of Food, the International Marketing Program for Agricultural Commodities and Trade (IMPACT) Center, and the Center for Sustaining Agriculture and Natural Resources. CAHNRS also conducts collaborative and interdisciplinary research projects involving other colleges and regional campuses within the University.

The research programs in CAHNRS require many sites that carry out the work, and many WSU scientists are located throughout the state to solve problems associated with production and marketing of Washington's agricultural and forestry products and to provide basic knowledge for improving the efficiency, quality, and quantity of production for food, fiber, and improvement in the quality of life.

The **International Marketing Program for Agricultural Commodities and Trade** (IMPACT) Center funds interdisciplinary research, extension, and teaching to assist the state in exporting its agricultural products. Its major thrusts are in uncovering marketing opportunities, developing strategies to exploit those opportunities, solving economic and technical impediments to current agricultural exports, and finding alternative products or processes with export market potential.

The **Center for Nonthermal Processing of Food** includes faculty members from Biological Systems Engineering, Food Science and Human Nutrition, Electrical Engineering, Biochemistry/Biophysics, and Microbiology. Research at the Center is focused on pulsed electric fields, oscillating magnetic fields, and high hydrostatic pressure as alternatives to food processing that involve application of heat.

The **Center for Precision Agricultural Systems** fosters collaborative research, education, and outreach that produces practical technologies and management systems for precision agriculture. Technologies include sensors for monitoring plant and environment status, software for data analysis and modeling, decision models for system optimization, and equipment to implement precision management decisions.

The **Center for Sustaining Agriculture and Natural Resources (CSANR)** creates sustainable agriculture and natural resource systems. The Center leads in developing and implementing interdisciplinary systems-oriented research and education programs at WSU. CSANR facilitates work towards sustainable agricultural systems, provides information through educational activities and encourages the use of sustainable agriculture practices.

The **Institute of Biological Chemistry** is dedicated to research on fundamental aspects of biological chemistry relevant to agriculture and forestry. Although not offering a formal course of study leading to a degree, the Institute provides research opportunities to fulfill the requirements for the Master of Science and Doctor of Philosophy in the graduate programs in the School of Molecular Biosciences (biochemistry/biophysics, chemistry, genetics, and cell biology), and the Graduate Program in Molecular Plant Sciences.

Research fellowships and assistantships are available in the Institute for incoming students on a competitive basis. Teaching assistantships are available from cooperating instructional departments and programs through which entry to the Graduate School is obtained. The internationally recognized research programs of the Institute cover a broad spectrum of areas from plant biochemistry, molecular biology, and genetic engineering to plant pathology and pest resistance, as well as the traditional areas of biochemistry.

College of Business

The **Small Business Development Center (SBDC)**, located at WSU Spokane, provides training programs, research services, and management counseling to business firms and communities throughout Washington. To this end, the Center draws on its own professional staff as well as on the resources of the University and other cooperating Washington institutions of higher education. The Center's business development specialists provide free, confidential, one-on-one counseling on all management topics. The counselors have certified broad-based skills and significant experience as

business owners or managers. Business counseling is also available through NetCounseling, an internet counseling program that performs business counseling and technical assistance. The SBDC also evaluates new products through its Innovation Assessment Center on a fee basis and provides business training through many Washington community colleges. It offers seminars, workshops, and conferences to assist small business owners and operators with specific skills and methods to maintain or expand their business.

College of Engineering and Architecture

The **Center for Materials Research** includes more than 20 faculty researchers from physics, chemistry, mechanical, and materials engineering that attract funding for equipment and research in such projects as deformation and fracture, diamond and thin films, soft lithography, semiconductors, electron tunneling microscopy, and nondestructive probes (e.g. positron beams) of defects in solids at the atomic and nuclear levels. Visit cmr.wsu.edu to learn more.

The **Center for Multiphase Environmental Research** unites doctoral students from a variety of departments to address threats to the water, air, and earth. Students in this program work in teams to transfer their own innovations to industry for application and commercialization.

The **Wood Materials and Engineering Laboratory (WMEL)** is an interdisciplinary research facility involving faculty and students from engineering and materials science. It attracts significant funding for research on natural fiber composites development of natural fiber composites (e.g. wood-plastics), nondestructive evaluation techniques, and novel building design and construction techniques. For more information visit: wmel.wsu.edu.

The **Center for the Design of Analog-Digital Integrated Circuits** is an NSF-sponsored industry-university research consortium in integrated circuitry that addresses electronics industry problems in the field of mixed signal design. Emphasis is on research in low-voltage circuits, wireless communication, and design for high-performance data converters and associated simulation, modeling, and layout tools. cdadic.com

The **Power Systems Engineering Research Center (PSERC)** is a multi-university collaborative research center supported by the National Science Foundation and the Electrical Power Research Institute. The PSERC supports research on the practical problems and particularly those associated with a restructured deregulated power industry. WSU was invited to join PSERC because of its strong power engineering program.

The **Albrook Hydraulic Laboratory** provides engineering services to government and industry in hydraulics and water resources. For more than four decades, it has helped solve hydroelectric power problems, salmon fish recovery efforts,

facilities construction, flood mitigation, land-based hazardous waste management, hydrology, and engineered wetlands. Visit ce.wsu.edu/Hydraulics/hwOverview.htm

The **Laboratory for Atmospheric Research** is recognized worldwide for its pioneering role in the development of regional and national emission inventories, tracer methods to measure air and ground gas pollution of all kinds, worldwide methane emissions surveys, windblown dust, and photo-chemical air contamination in the Northwest. Investigations include Spokane and Puget Sound health hazard research on small air particulates, ozone concentration in the Puget Sound region, and improved understanding of global warming by measuring biogenic hydrocarbons released from vegetation. Visit lar.wsu.edu for more information

Murrow College of Communication

The **Virtual Reality and Computer Integrated Manufacturing Laboratory** performs fundamental and applied research in computer-aided design, virtual reality knowledge representations, and sustainability considerations in product lifestyles.

The **Center for Media & Health Promotion Research** in the Murrow College of Communication develops and evaluates health communication strategies that make use of a full range of media platforms that affect social development and quality of life. Studies involve health messaging that targets young people and their families, including media regarding alcohol abuse and tobacco prevention.

College of Arts and Sciences

AccessNorthwest strives to increase access to and use of government information, particularly by disenfranchised populations. The group hopes to enhance civic engagement and to build a more informed electorate for a stronger democracy.

The **Digital Recording Studio** was established in 2003 to serve the programmatic needs of the Music Program within the School of Music and Theater Arts. Located in Kimbrough Music Building, the studio provides an ideal acoustic setting for limited scope recordings in the studio, and processing of on-location recordings from other venues. The recording studio is equipped with a Fazioli Concert Grand Piano and the most current versions of the requisite digital recording, editing, and processing equipment.

The **Hearing and Speech Clinic**, located in the Health Sciences Building on the WSU Spokane campus, is operated jointly by the WSU Department of Speech and Hearing Sciences and the Eastern Washington University Communications Disorders Department. The Hearing and Speech Clinic is a state-of-the-art facility that serves the Department of Speech and Hearing Sciences' tripartite missions in teaching, research and service. The Clinic provides a full

range of assessment and rehabilitation services to the community in the areas of speech, voice, language, and hearing. Graduate students gain valuable clinical experiences with patients across the lifespan under supervision of nationally certified and state licensed faculty. Clinic clientele are invited to participate in master's thesis research approved by the WSU and EWU Institutional Research Boards (IRB).

The **Humanities Research Center** was established in 1980 to provide shared facilities, equipment, and consulting services in support of humanistic research. The facilities and services of the Center are available to all faculty in the College subject to a schedule of project priorities. Computer support is predominantly in the area of text processing (production of books, articles, and dissertations) and photocomposition of scholarly journals, as well as new visual media communications.

The **Language-Learning Resource Center (LLRC)** was established in 1912 by the Department of Foreign Languages and Cultures as a teaching resource center. Since its inception, the Center has been a focal point within the Department for exploring the use of technology in the teaching of languages. Today, the LLRC is engaged in managing and maintaining two computer-based language learning labs offering undergraduate and graduate students access to course specific online language learning tools and resources. Additionally, the Center manages and maintains a departmental web server and a streaming audio/video server that together provides students with 24-hour access to a wealth of language related educational and informational resources. The LLRC also maintains equipment (such as audio and video tape players) for accessing its extensive collection of traditional audio and video resources.

The **Human Psychophysiology Teaching Laboratory** combines the standard E-prime computer software for testing of cognition and behavior along with equipment for the examination of central nervous system activity responsible for cognition and behavior. The laboratory provides state of the art technology for measurement of brain activity by means of electroencephalograph (EEG). Also included are devices for peripheral physiological measurement of skin conductance response (SCR) and cardiovascular activity.

The **Sociological Data Processing Center** and the **Social Science Computing Laboratory** are important resources for graduate students in the sociology program. They serve many functions, including provision of the following: Internet access and email, access to the campus Zzsis system, data manipulation and analysis programs, and graphics and image processing software. While the Sociological Data Processing Center is reserved exclusively for graduate students and faculty, the Social science Computing Laboratory is used primarily for graduate students and faculty course instruction in the College of Arts and Sciences.

The Writing Center, established in 1983 by the Department of English, is an instructional resource center serving students and faculty who want assistance with writing. The Center offers several courses, an on-line writing component, and is a consulting resource for instructors who want assistance in incorporating writing into their courses.

The Thomas S. Foley Institute for Public Policy and Public Service, established in 1995, supports congressional and legislative studies, public policy research, voter education, and community outreach. The Institute also provides opportunities for public service internships in Congress, state legislatures, and other governmental and non-profit organizations.

The **Division of Governmental Studies and Services** employs graduate students on research projects related to government and public affairs, administers an internship program to provide practical experience in government, and maintains a collection of specialized government publications.

The **Franceschi Microscopy and Imaging Center**, located in Science Hall, is available for training and research in science and technology. Washington State University students, staff, and faculty members have access to the facilities for training consultation and service work. Formal courses in electron microscopy are offered by the Center, which maintains three transmission electron microscopes (including an analytical TEM equipped with STEM and EDX), a scanning electron microscope, also with EDX, a confocal microscope, and a full complement of ancillary equipment and facilities. The Center has a skilled staff experienced in handling a wide range of research problems in electron microscopy.

The **Environmental Research Center** is closely integrated with the academic program in Environmental Science and Regional Planning and is the focal point for university development of interdisciplinary research on problems related to the environment.

The **James Richard Jewett Observatory** is the gift of Mr. and Mrs. George F. Jewett of Spokane and is named in honor of Mr. Jewett's father, a former professor of ancient languages at Harvard University. The Observatory houses a 12-inch refractor with a visual lens and a 25-foot revolving dome. The University **Planetarium** is located in Sloan Hall 231. Information about open house and group tours of either the Observatory or Planetarium can be obtained by contacting the Program in Astronomy.

The **Center for Nuclear Magnetic Resonance Spectroscopy** (NMR) is in the Chemistry Synthesis Building and houses three high-field superconducting NMR instruments. The prime purpose of the instruments is to characterize structures of biological samples as solids or in solution for faculty and students in the sciences, agriculture, veterinary medicine, and

pharmacy. The facility is open for users who acquire appropriate training.

The **Institute for Shock Physics** is a multi-disciplinary research organization with an emphasis on understanding condensed matter response at extreme conditions. Research activities involve examining and understanding physical and chemical changes in solids and liquids under very rapid and large compressions. WSU is a leader in shock wave and high pressure research. The Institute's Applied Sciences Laboratory, a multidisciplinary contract research organization, undertakes a broad range of applied research activities of interest to industry and government agencies; it is located at WSU Spokane.

The **Laboratory of Bioanalysis and Biotechnology (LBB)** has three units with closely related but distinct functions. LBB I provides protein and DNA sequencing as well as peptide and oligonucleotide synthesis and also has gene chip analyzers for genomics research. LBB II houses four mass spectrometers to do proteomics and high resolution analysis of biological macromolecules. LBB III provides amino acid analysis of peptides and other biological material.

The **Center for Materials Research** was established as an interdisciplinary unit to serve the scientific community, assist the University in attracting and conducting research, and strengthen the educational capabilities of the University. The Center promotes interaction between researchers, provides mechanisms to improve educational programs in materials science, and provides a focal point for the purchase and construction of shared equipment and the development of other resources.

The **Center for Reproductive Biology** is an inter-institutional program involving 18 departments and seven colleges at WSU and the University of Idaho and is one of the largest reproductive biology centers in the world. The Center has 109 faculty who actively participate in reproductive biology research as well as more than 400 students, postdoctoral fellows, and staff. The objectives of the Center are to foster research of the highest quality and promote collaborative interactions among Center members; enhance opportunities for extramural funding with an emphasis on multi-investigator grants; and to enhance the training and education programs of advanced undergraduate, graduate and postdoctoral fellows with an interest in the biology of reproduction. Additionally, the Center operates 11 Core Laboratories that provides high-tech centralized services to members. These cores enhance faculty research capabilities and improve opportunities to compete for federal and industry research grants and contracts. For more information on the Center, visit: crb.wsu.edu/

College of Veterinary Medicine

Since its creation in 1974, the **Washington Animal Disease Diagnostic Laboratory (WADDL)** has provided essential laboratory services in bacteriology, parasitology, pathology, serology, toxicology, and virology. The Laboratory is an integral part of a network of tax-supported state diagnostic reference facilities throughout the United States dedicated to the betterment of animal and human health. WADDL has a responsibility to provide appropriate, timely results to safeguard the health of livestock, pets, poultry, and fish in the Pacific Northwest and to protect the public from zoonotic diseases. Advice and consultation is provided to practicing veterinarians, animal industry groups, state and federal regulatory officials, and physicians. WADDL also provides centralized service for the College by providing electron microscopy and histology support.

The **Animal Health Research Center (AHRC)** provides oversight of research programs within the College of Veterinary Medicine with an emphasis on diseases of agricultural animals and public health. Center research is divided into core programs that include transmissible spongiform encephalopathies, food borne diseases and antimicrobial resistance, immunology and vaccine development, microbial and host genomics, vector-borne diseases, and lentiviral disease. In conjunction with the College departmental graduate programs, AHRC research programs provide undergraduate research and graduate education opportunities.

The **Center for the Study of Animal Wellbeing** is a joint development between the College of Veterinary Medicine and the Department of Animal Sciences in the College of Agricultural, Human, and Natural Resources. The primary mission of the Center is to generate and disseminate new knowledge to make animal well-being and human-animal interactions better understood. Research areas include indicators of animal well-being, objective assessment of stress and pain, animal behavior and preferences, and the interrelationship of animal health and well-being to production and performance.

The **Center for Teaching, Learning, and Technology** is a central resource for all WSU instructors, including graduate teaching assistants. The CTLT works with faculty to identify and implement strategic methods of incorporating successful teaching approaches into their courses and programs. In addition, the CTLT applies current scholarship on effective teaching and learning to develop a variety of resources to help instructors in their efforts. The CTLT's resources include consultations about course and learning activity design, assessment techniques, and integrating instructional technologies; frequent discussions and workshops; and on-line technologies for learning and assessment. CTLT is located in ITB 2001B and can be reached at 335-1355 or ctlit@wsu.edu.

Departments, Programs, and Courses

Explanation of SYMBOLS

- 2 Figure following course title indicates the hours of credit and the number of lectures per week.
() Hours of lecture and laboratory required each week during the semester, with lecture being the first figure and laboratory the second.
(a/y) Indicates alternate years.
c// Indicates concurrent enrollment.

Courses listed in this catalog are subject to change through normal academic channels. New courses and changes are initiated by the cognizant departments or programs, approved through the appropriate academic dean, the Catalog Subcommittee, the Academic Affairs or Graduate Studies Committees, and the University Senate. Additions to the curriculum for the ensuing year are published each fall in the Catalog Supplement within the Fall Time Schedule. It is the obligation of the student to be acquainted with all the pertinent information in this Catalog and the Graduate School Policies and Procedures Manual to see that all departmental requirements are satisfied.

Accounting – Accounting (Pullman)

Degree offered: Master of Accounting
Faculty working with graduate students: 7
Graduate students: 40
Graduate students receiving assistantships or scholarships: 20%
Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI
Deadline: Fall: January 10
 Spring: July 1

Program Description

The Master of Accounting degree prepares students for careers as professional accountants in financial institutions, government, industry, nonprofit organizations, and public practice. The Master of Accounting degree program is a 32 credit hour general program of study that exposes students to accounting research and theory. The Pullman campus has a focus on audit and assurance while the Vancouver campus has a focus on taxation.

Degree Description

The Master of Accounting Pullman program has an audit and assurance focus. The degree prepares students for careers as professional accountants in financial institutions, government, industry, nonprofit organizations, and public practice. The Master of Accounting degree is a 32 credit hour program that exposes students to technical accounting topics and emphasizes professional accounting research and writing skills.

Training and Professional Development Opportunities

Greater breadth and depth in accounting than is possible in baccalaureate or general business degree programs. Additional preparation for the CPA examination. Additional credit hours targeted to meet the 150 credit hours necessary for CPA examination eligibility. Small class sizes.

Post-Graduate Employment Opportunities

Entry level positions in financial institutions, government, industry, nonprofit organizations, and public accounting firms.

ECONS

500 Macroeconomic Theory I 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.

501 Microeconomic Theory I 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.

502 Macroeconomic Theory II 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).

503 Microeconomic Theory II 3 Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).

504 Production and Consumption Economics 3 Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).

505 Economics for Agricultural Decision Making 3 Managerial economics with specific applications to agricultural issues.

- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I 3** Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II 3** Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V 1-2** May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Agriculture

Degree offered: Master of Science in Agriculture

Faculty working with graduate students: 64

Graduate students: 20

Program offered: DDP

Tests required: TOEFL, TOEFLI

Deadline: Fall: November 1 (January 10 international)

Spring: May 1 (July 1 international)

Requirements

MS in Agriculture Thesis Option

Components of the thesis option:-21 hours minimum of graded coursework:15 hours minimum of graded coursework at the 500-level; 4 hours minimum of AGRI 700 credit; 3 hours maximum of seminar courses; 6 hours maximum in non-graduate graded coursework (300 - 400 level only)Preparation of a formal thesis/research paper (AGRI 700 credits)-Two-part final exam: Public seminar where student presents the results of the research project Oral exam that focuses on defense of the research project, attended by all committee members

Program Description

The M.S. in Agriculture program, offered by the College of Agricultural, Human, and Natural Resource Sciences, is designed to provide practitioners and professionals an opportunity to strengthen and diversify their expertise in agriculture-related

disciplines. The program is completely web-based and can be completed anywhere in the world, although students may choose to take courses on the Pullman campus. Outstanding faculty participation from a diverse array of academic disciplines, including animal science, crop and soil sciences, entomology, horticulture and landscape architecture, plant pathology, food science, and economic sciences, makes the program truly interdisciplinary. With support from an advising committee, students have the opportunity to tailor their coursework to meet their personal and professional learning goals.

Degree Description

The M.S. in Agriculture program is designed to provide practitioners and professionals with an opportunity to strengthen and diversify their expertise in agriculture-related disciplines. The program is completely web-based and can be completed from anywhere in the world, although students may choose to take courses on the Pullman campus. Outstanding faculty participation from a diverse array of academic disciplines, including animal science, crop and soil sciences, entomology, horticulture, landscape architecture, plant pathology, food science, and economic sciences, makes the program truly interdisciplinary. With support from an advising committee, students have the opportunity to tailor their coursework to meet their personal and professional learning goals. To enable students to become outstanding educators and practitioners in agricultural disciplines, the program will foster the development of excellent communication and teaching skills, as well as a comprehensive understanding of research approaches used to address agricultural issues. Both thesis (research emphasis) and non-thesis (coursework emphasis) tracks are available to students pursuing the MS in Agriculture degree. In general, the thesis option requires both the successful completion of coursework, and the preparation and oral defense of the thesis based on a research project the student conducted. The thesis option is ideal for people who are interested in pursuing or expanding a professional career involving the scientific aspects of an agricultural discipline. This degree also is suitable for individuals who intend to continue their graduate education. The non-thesis option requires the completion of additional coursework, preparation of an independent project paper, a written comprehensive examination, and an oral defense of concepts discussed in the independent project paper, comprehensive exam, and relevant course work. The non-thesis option provides students who do not intend to develop comprehensive research skills with an opportunity to obtain an advanced degree of similar quality and depth as a thesis-based master's degree program. Additional coursework and the independent project/paper are substituted for the intensive thesis experience. The non-thesis option is designed for students with relevant experience in industry who are interested in expanding their expertise in a particular agricultural discipline. Knowledge acquired through this experience will likely be used by successful candidates to improve performance or expand opportunities for advancement in a current employment situation, or to support a student with redirecting their career opportunities towards a new discipline.

Post-Graduate Employment Opportunities

Graduates may find employment in government agencies, national labs, academia, private business, and agricultural consulting.

Post-Graduate Career Placements

Our alumni occupy positions in business and industry, production

and business management, teaching, extension, federal and state government, community colleges, school administration, and as owners of independent businesses.

Faculty

Preston Andrews, John Baser, Chris Benedict, Margaret Benson, Bhaskar Bondada, Vicki Bradley, Michael Brady, Jay Brunner, Ian Burke, Lynne Carpenter-Boggs, Linda Chalker-Scott, Gary Chastagner, Xianming Chen, Hayley Chouinard, Craig Cogger, Jeffrey Culbertson, Joan Davenport, Kefyalew Desta, Amit Dhingra, James Durfey, Katherine Evans, John Fellman, Markus Flury, T Fortenbery, Steven Fransen, Rosa Gallardo, James Harsh, Rita Hummel, Pete Jacoby, William Johnston, Stephen Jones, Markus Keller, Kimberlee Kidwell, Karen Killinger, Norman Knowles, Richard Koenig, Desmond Layne, Virginia Lohr, H Love, Drew Lyon, Vicki McCracken, John McNamara, Carol Miles, Timothy Miller, Michelle Moyer, Kevin Murphy, Joseph Neibergs, John Nelson, Mark Nelson, Nnadozie Oraguzie, William Pan, Chris Pannkuk, Hanu Pappu, Mark Pavek, R Peters, Barbara Rasco, John Reganold, Carolyn Ross, Richard Rupp, Rodney Saylor, Walter Sheppard, Denise Smith, John Stark and Matthew Whiting.

STAT

- 412 Statistical Methods in Research I** 3 Course Prerequisite: STAT 212, MATH 140, 171, or 202. Intermediate statistical methods, design and analysis of research studies: completely randomized and randomized block designs, multiple regression, categorical data analysis.
- 501 Agriculture Master's Practicum V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to graduate program in Master of Science in Agriculture. Course individually designed to provide practical participation/experience under professional supervision in areas related to student's specialization.
- 502 Graduate Seminar** 3 Presentations and discussions of contemporary issues, trends, and recent research and development by graduate students, faculty, and visiting scholars.
- 560 Contemporary Issues in Agricultural Technology and Policy** 3 Contemporary issues in agricultural technology and policy implications.
- 562 Advanced Topics V** 1-3 May be repeated for credit; cumulative maximum 4 hours. Directed group study of selected advanced topics in agriculture and related areas.
- 587 Research and Extension in Agriculture** 3 Ways to effectively communicate research and extension information to diverse audiences; and to plan and assess effective extension programs.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 508 Environmental Spatial Statistics** 3 Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics** 3 May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments** 3 (2-2) Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series** 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis** 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data** 3 Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology** 3 Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.

- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.

- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Agriculture

Degree offered: Master of Science in Agriculture – Non Thesis

Faculty working with graduate students: 65

Graduate students: 21

Program offered: DDP

Tests required: TOEFL, TOEFLI

Deadline: Fall: November 1 (January 10 international)

Spring: May 1 (July 1 international)

Requirements

MS in Agriculture Non-Thesis Option

Components of the non-thesis option:-26 hours minimum of graded course work:17 hours minimum of graded course work at the 500-level; 4 hours minimum of AGRI 702; 3 hours maximum of seminar courses; 9 hours maximum of non-graduate graded course work credit (300 - 400 level only)-Independent project and paper (AGRI 702 credits)-Comprehensive exam, which typically consists of two to four questions answered in writing without the aid of notes, books or other reference materials. The comprehensive exam typically takes 4 - 8 hours to complete.-Final oral exam with the committee focusing on comprehensive exam responses, the independent project, and course content.

Program Description

The M.S. in Agriculture program, offered by the College of Agricultural, Human, and Natural Resource Sciences, is designed to provide practitioners and professionals an opportunity to strengthen and diversify their expertise in agriculture-related disciplines. The program is completely web-based and can be completed anywhere in the world, although students may choose to take courses on the Pullman campus. Outstanding faculty

participation from a diverse array of academic disciplines, including animal science, crop and soil sciences, entomology, horticulture and landscape architecture, plant pathology, food science, and economic sciences, makes the program truly interdisciplinary. With support from an advising committee, students have the opportunity to tailor their coursework to meet their personal and professional learning goals.

Degree Description

The M.S. in Agriculture program is designed to provide practitioners and professionals with an opportunity to strengthen and diversify their expertise in agriculture-related disciplines. The program is completely web-based and can be completed anywhere in the world, although students may choose to take courses on the Pullman campus. Outstanding faculty participation from a diverse array of academic disciplines, including animal science, crop and soil sciences, entomology, horticulture and landscape architecture, plant pathology, food science, and economic sciences, makes the program truly interdisciplinary. With support from an advising committee, students have the opportunity to tailor their coursework to meet their personal and professional learning goals. To enable students to become outstanding educators and practitioners in agricultural disciplines, the program will foster the development of excellent communication and teaching skills, as well as a comprehensive understanding of research approaches used to address agricultural issues. Both thesis (research emphasis) and non-thesis (coursework emphasis) tracks are available to students pursuing the MS in Agriculture degree. In general, the thesis option requires both the successful completion of coursework, and the preparation and oral defense of the thesis based on a research project the student conducted. The thesis option is ideal for people who are interested in pursuing or expanding a professional career involving the scientific aspects of an agricultural discipline. This degree also is suitable for individuals who intend to continue their graduate education. The non-thesis option requires the completion of additional coursework, preparation of an independent project paper, a written comprehensive examination, and an oral defense of concepts discussed in the independent project paper, comprehensive exam, and relevant course work. The non-thesis option provides students who do not intend to develop comprehensive research skills with an opportunity to obtain an advanced degree of similar quality and depth as a thesis-based master's degree program. Additional coursework and the independent project/paper are substituted for the intensive thesis experience. The non-thesis option is designed for students with relevant experience in industry who are interested in expanding their expertise in a particular agricultural discipline. Knowledge acquired through this experience will likely be used by successful candidates to improve performance or expand opportunities for advancement in a current employment situation, or to support a student with redirecting their career opportunities towards a new discipline.

Post-Graduate Career Placements

Our alumni occupy positions in business and industry, production and business management, teaching, extension, federal and state government, community colleges, school administration, and as owners of independent businesses.

(Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.

- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

American Studies

Degree offered: Doctor of Philosophy (American Studies)

Faculty working with graduate students: 20

Graduate students: 22

Graduate students receiving assistantships or scholarships: 68%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Program Description

The Doctor of Philosophy Degree (Ph.D.) in American Studies at Washington State University requires a previous Master's Degree in American Studies, History, English, Ethnic Studies, Women's Studies, or a related discipline in the social sciences or the humanities. The degree aims to achieve both breadth of knowledge in US cultural history, and depth of knowledge in an interdisciplinary area of specialization.

Degree Description

The Doctor of Philosophy Degree (Ph.D.) in American Studies at Washington State University does not require a previous Master's Degree in American Studies, History, English, Ethnic Studies, Women's Studies, or a related discipline in the social sciences or the humanities. The degree aims to achieve both breadth of knowledge in US cultural history, and depth of knowledge in an interdisciplinary area of specialization. The Program in American Studies requires that the Ph.D. include a total of seventy-two (72) credit hours beyond the BA, including transfer credits (up to 17 from an MA degree), research, and dissertation credits. A minimum total of thirty-four (34) must be graded credit hours in graduate courses.

Training and Professional Development Opportunities

While most of our graduate students enter careers in university and college teaching, an American Studies advanced degree can also be utilized as a useful preparation for community activism, museum and archive work, traditional and electronic publishing, and government service, among other careers.

Post-Graduate Employment Opportunities

Independent contractor for US Park Service and other government and tribal agencies, Census Bureau, museum education/outreach programs, archival researcher, genealogist/historian, humanitarian organizations

Post-Graduate Career Placements

Director, College Assistance Migrant Program; Journal Staff; Administration/Program Directors; Retention Counselor for Asian American Pacific Islanders; Associate Director, Multicultural student Services; Director of Multicultural Heritage Houses

AM ST

- 470 Literature and Culture of the American West 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Junior standing. Cultural exploration of American West in written texts; outsider and insider versions of reality and imagination of its diverse peoples. (Cross-listed course offered as ENGLISH 470, AMER ST 470).
- 471 Cultural Politics Since World War II 3** American popular culture, politics and culture of the 1960s, or topics in recent cultural politics.
- 472 Ecological Issues and American Nature Writing 3** Course Prerequisite: Junior standing. Representation of nature in American fiction and nonfiction; role of culture in shaping environmental problems and solutions. (Cross-listed course offered as AMER ST 472, ENGLISH 472).

- 473 Arts in American Cultures 3** Course Prerequisite: Junior standing. Exploration of visual culture from fine arts to advertising as a political, sociological, psychological, and philosophical influence in 20th-century American cultures.
- 474 Social Movements and US Culture 3** Course Prerequisite: Junior standing. Cultural impact of selected social movements such as abolition, populism, labor, women's, ethnic power, gay/lesbian and anti-globalization.
- 475 Digital Diversity 3** Course Prerequisite: Junior standing. Cultural impact of electronic media, especially the World-Wide Web; issues of race, class, gender, sexuality online. (Cross-listed course offered as AMER ST 475, DTC 475, ENGLISH 475).
- 500 Colloquium 1** May be repeated for credit; cumulative maximum 12 hours. Current research in American studies.
- 501 Readings in American Studies I 3** May be repeated for credit; cumulative maximum 6 hours. Readings in key texts in American culture, beginnings to 1865.
- 502 Readings in American Studies II 3** May be repeated for credit; cumulative maximum 9 hours. Readings in key texts in American culture, 1865 to present.
- 503 Contemporary Theories of Race and Ethnicity 3** Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 505 Pro Seminar in American Cultural Studies 3** Critical theoretical engagement within an interdisciplinary field; emphasis on professionalism.
- 506 Frameworks in American Cultural Studies 3** Critical framework for intellectual, theoretical, and political genealogies within American Studies.
- 507 Contemporary Practices in American Cultural Studies 3** Overview of contemporary practices in American cultural studies; important concepts and major insights within the field.
- 513 Theory and Method in American Studies 3** Major theories and methods currently used by American studies scholars; key concepts in cultural analysis. (Cross-listed course offered as AMER ST 513, ENGLISH 513, HISTORY 513).
- 514 Interdisciplinary Research Methods 3** Major methods used in interdisciplinary cultural analysis including critical ethnography, oral history, rhetorical and textual analysis and other qualitative approaches.
- 520 Colonization, Globalization and Decolonization 3** Topics in the critical study of colonialism, neo-colonialism, imperialism, globalization and resistance to these forces.
- 521 Critical Studies in Sexuality 3** Topics in the critical analysis of normative sexualities and forces shaping US and global cultures.
- 522 Digital Cultures, Digital Divides 3** Critical analysis of the social and cultural dimensions of the digital divide and use of digital technologies by dominant and subaltern communities.
- 523 Environmental Justice Cultural Studies 3** Critical analysis of the cultural dimensions of environmental justice and injustice.
- 524 Critical Studies in Popular Culture 3** Interdisciplinary approaches to historical and contemporary trends and issues in US popular culture.
- 525 Social Movements in American Studies 3** Theoretical and historical study of the role of social movement in United States culture.
- 526 Contemporary Theories of Race and Ethnicity 3** Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 527 Contemporary Feminist Theories and Practices 3** Major theoretical readings and key recent texts in U.S. and transnational feminist scholarship.
- 590 Seminar in American Studies 3** May be repeated for credit; cumulative maximum 9 hours. Interdisciplinary topics in American culture.
- 596 Topics in American Studies 3** May be repeated for credit; cumulative maximum 9 hours. American Studies Summer Institute. (Cross-listed course offered as AMER ST 596, HISTORY 596). Credit not granted for both HISTORY 496 and HISTORY 596.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

American Studies

Degree offered: Master of Arts in American Studies

Faculty working with graduate students: 20

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Program Description

The Doctor of Philosophy Degree (Ph.D.) in American Studies at Washington State University requires a previous Master's Degree

in American Studies, History, English, Ethnic Studies, Women's Studies, or a related discipline in the social sciences or the humanities. The degree aims to achieve both breadth of knowledge in US cultural history, and depth of knowledge in an interdisciplinary area of specialization.

Degree Description

The program for the Master of Arts (M.A.) in American Studies at Washington State University is designed to provide a broad background in American Culture Studies. In consultation with their advisor, candidates are expected to assemble a range of courses and independent study in American ethnic studies, literature, history, women's studies, and related fields that will provide them with a broad knowledge of US culture and of current approaches to cultural interpretation. TRADITIONAL THESIS: Students taking the thesis option write a thesis (typically 75-125 pages) synthesizing material on an American Studies topic they choose in consultation with their degree committee. (Examples of previous theses are available in the Coordinator's office.) Approval of the thesis occurs after a final oral exam conducted by the student's degree committee, and constitutes completion of the degree, presuming all course, exam and language requirements have been met. The M.A. program of study, to be filed with the graduate school, must include a minimum of thirty (30) post-BA credit hours, at least thirty (30) of which must be in graded courses.

Training and Professional Development Opportunities

While most of our graduate students enter careers in university and college teaching, an American Studies advanced degree can also be utilized as a useful preparation for community activism, museum and archive work, traditional and electronic publishing, and government service, among other careers.

Post-Graduate Employment Opportunities

Independent contractor for US Park Service and other government and tribal agencies, Census Bureau, museum education/outreach programs, archival researcher, genealogist/historian, humanitarian organizations

Post-Graduate Career Placements

Director, College Assistance Migrant Program; Journal Staff; Administration/Program Directors; Retention Counselor for Asian American Pacific Islanders; Associate Director, Multicultural student Services; Director of Multicultural Heritage Houses

Mary Bloodsworth-Lugo, Kimberly Christen, Patricia Ericsson, Luz-Maria Gordillo, Lisa Guerrero, Linda Heidenreich, Wendy Johnson, C King, David Leonard, Carmen Lugo-Lugo, Laurie Mercier, Judy Meuth, Pavithra Narayanan, Rory Ong, Paula Price, Thomas Reed, Marian Sciachitano, Nishant Shahani, John Streamas and Pamela Thoma.

AM ST

- 470 Literature and Culture of the American West** 3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Junior standing. Cultural exploration of American West in written texts; outsider and insider versions of reality and imagination of its diverse peoples. (Cross-listed course offered as ENGLISH 470, AMER ST 470).
- 471 Cultural Politics Since World War II** 3 American popular culture, politics and culture of the 1960s, or topics in recent cultural politics.
- 472 Ecological Issues and American Nature Writing** 3 Course Prerequisite: Junior standing. Representation of nature in American fiction and nonfiction; role of culture in shaping environmental problems and solutions. (Cross-listed course offered as AMER ST 472, ENGLISH 472).
- 473 Arts in American Cultures** 3 Course Prerequisite: Junior standing. Exploration of visual culture from fine arts to advertising as a political, sociological, psychological, and philosophical influence in 20th-century American cultures.
- 474 Social Movements and US Culture** 3 Course Prerequisite: Junior standing. Cultural impact of selected social movements such as abolition, populism, labor, women's, ethnic power, gay/lesbian and anti-globalization.
- 475 Digital Diversity** 3 Course Prerequisite: Junior standing. Cultural impact of electronic media, especially the World-Wide Web; issues of race, class, gender, sexuality online. (Cross-listed course offered as AMER ST 475, DTC 475, ENGLISH 475).

- 500 Colloquium 1** May be repeated for credit; cumulative maximum 12 hours. Current research in American studies.
- 501 Readings in American Studies I 3** May be repeated for credit; cumulative maximum 6 hours. Readings in key texts in American culture, beginnings to 1865.
- 502 Readings in American Studies II 3** May be repeated for credit; cumulative maximum 9 hours. Readings in key texts in American culture, 1865 to present.
- 503 Contemporary Theories of Race and Ethnicity 3** Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 505 Pro Seminar in American Cultural Studies 3** Critical theoretical engagement within an interdisciplinary field; emphasis on professionalism.
- 506 Frameworks in American Cultural Studies 3** Critical framework for intellectual, theoretical, and political genealogies within American Studies.
- 507 Contemporary Practices in American Cultural Studies 3** Overview of contemporary practices in American cultural studies; important concepts and major insights within the field.
- 513 Theory and Method in American Studies 3** Major theories and methods currently used by American studies scholars; key concepts in cultural analysis. (Cross-listed course offered as AMER ST 513, ENGLISH 513, HISTORY 513).
- 514 Interdisciplinary Research Methods 3** Major methods used in interdisciplinary cultural analysis including critical ethnography, oral history, rhetorical and textual analysis and other qualitative approaches.
- 520 Colonization, Globalization and Decolonization 3** Topics in the critical study of colonialism, neo-colonialism, imperialism, globalization and resistance to these forces.
- 521 Critical Studies in Sexuality 3** Topics in the critical analysis of normative sexualities and forces shaping US and global cultures.
- 522 Digital Cultures, Digital Divides 3** Critical analysis of the social and cultural dimensions of the digital divide and use of digital technologies by dominant and subaltern communities.
- 523 Environmental Justice Cultural Studies 3** Critical analysis of the cultural dimensions of environmental justice and injustice.
- 524 Critical Studies in Popular Culture 3** Interdisciplinary approaches to historical and contemporary trends and issues in US popular culture.
- 525 Social Movements in American Studies 3** Theoretical and historical study of the role of social movement in United States culture.
- 526 Contemporary Theories of Race and Ethnicity 3** Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 527 Contemporary Feminist Theories and Practices 3** Major theoretical readings and key recent texts in U.S. and transnational feminist scholarship.
- 590 Seminar in American Studies 3** May be repeated for credit; cumulative maximum 9 hours. Interdisciplinary topics in American culture.
- 596 Topics in American Studies 3** May be repeated for credit; cumulative maximum 9 hours. American Studies Summer Institute. (Cross-listed course offered as AMER ST 596, HISTORY 596). Credit not granted for both HISTORY 496 and HISTORY 596.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

American Studies

Degree offered: Master of Arts in American Studies – Non Thesis

Faculty working with graduate students: 20

Graduate students: 1

Graduate students receiving assistantships or scholarships: 100%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Program Description

The Doctor of Philosophy Degree (Ph.D.) in American Studies at Washington State University requires a previous Master's Degree in American Studies, History, English, Ethnic Studies, Women's Studies, or a related discipline in the social sciences or the humanities. The degree aims to achieve both breadth of knowledge in US cultural history, and depth of knowledge in an interdisciplinary area of specialization.

Degree Description

The program for the Master of Arts (M.A.) in American Studies at Washington State University is designed to provide a broad background in American Culture Studies. In consultation with their

advisor, candidates are expected to assemble a range of courses and independent study in American ethnic studies, literature, history, women's studies, and related fields that will provide them with a broad knowledge of US culture and of current approaches to cultural interpretation. Students who choose the portfolio instead of any of the thesis options must complete the following:

1. One publishable paper based upon graduate level research, preferably a paper which has been presented at a conference. A short cover letter for the paper should identify possible venues for publication as well as locate the paper's relationship to the student's overall academic preparation for presenting such a paper. The paper may be a revised seminar paper from work in core classes, a paper concerning the student's area of emphasis, or a general seminar paper or academic writing project prepared for publication. It is expected that selection and preparation of the paper will be accomplished over time in consultation with members of the student's degree committee, and
2. A position paper of 8-10 pages, written after completing the core courses required of master's students. In the position paper, the student will focus either on an area of emphasis or an area of specialization, not both, and clarify how course work in the core compliments or expands upon the work completed in an area of specialization or emphasis. The non-thesis M.A. program of study, to be filed with the graduate school, must include a minimum of thirty (30) post-BA credit hours, at least thirty (30) of which must be in graded courses.

Training and Professional Development Opportunities

While most of our graduate students enter careers in university and college teaching, an American Studies advanced degree can also be utilized as a useful preparation for community activism, museum and archive work, traditional and electronic publishing, and government service, among other careers.

Post-Graduate Employment Opportunities

Independent contractor for US Park Service and other government and tribal agencies, Census Bureau, museum education/outreach programs, archival researcher, genealogist/historian, humanitarian organizations

Post-Graduate Career Placements

Director, College Assistance Migrant Program; Journal Staff; Administration/Program Directors; Retention Counselor for Asian American Pacific Islanders; Associate Director, Multicultural student Services; Director of Multicultural Heritage Houses

AM ST

- 470 Literature and Culture of the American West 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Junior standing. Cultural exploration of American West in written texts; outsider and insider versions of reality and imagination of its diverse peoples. (Cross-listed course offered as ENGLISH 470, AMER ST 470).
- 471 Cultural Politics Since World War II 3** American popular culture, politics and culture of the 1960s, or topics in recent cultural politics.
- 472 Ecological Issues and American Nature Writing 3** Course Prerequisite: Junior standing. Representation of nature in American fiction and nonfiction; role of culture in shaping environmental problems and solutions. (Cross-listed course offered as AMER ST 472, ENGLISH 472).
- 473 Arts in American Cultures 3** Course Prerequisite: Junior standing. Exploration of visual culture from fine arts to advertising as a political, sociological, psychological, and philosophical influence in 20th-century American cultures.
- 474 Social Movements and US Culture 3** Course Prerequisite: Junior standing. Cultural impact of selected social movements such as abolition, populism, labor, women's, ethnic power, gay/lesbian and anti-globalization.
- 475 Digital Diversity 3** Course Prerequisite: Junior standing. Cultural impact of electronic media, especially the World-Wide Web; issues of race, class, gender, sexuality online. (Cross-listed course offered as AMER ST 475, DTC 475, ENGLISH 475).
- 500 Colloquium 1** May be repeated for credit; cumulative maximum 12 hours. Current research in American studies.

- 501 Readings in American Studies I** 3 May be repeated for credit; cumulative maximum 6 hours. Readings in key texts in American culture, beginnings to 1865.
- 502 Readings in American Studies II** 3 May be repeated for credit; cumulative maximum 9 hours. Readings in key texts in American culture, 1865 to present.
- 503 Contemporary Theories of Race and Ethnicity** 3 Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 505 Pro Seminar in American Cultural Studies** 3 Critical theoretical engagement within an interdisciplinary field; emphasis on professionalism.
- 506 Frameworks in American Cultural Studies** 3 Critical framework for intellectual, theoretical, and political genealogies within American Studies.
- 507 Contemporary Practices in American Cultural Studies** 3 Overview of contemporary practices in American cultural studies; important concepts and major insights within the field.
- 513 Theory and Method in American Studies** 3 Major theories and methods currently used by American studies scholars; key concepts in cultural analysis. (Cross-listed course offered as AMER ST 513, ENGLISH 513, HISTORY 513).
- 514 Interdisciplinary Research Methods** 3 Major methods used in interdisciplinary cultural analysis including critical ethnography, oral history, rhetorical and textual analysis and other qualitative approaches.
- 520 Colonization, Globalization and Decolonization** 3 Topics in the critical study of colonialism, neo-colonialism, imperialism, globalization and resistance to these forces.
- 521 Critical Studies in Sexuality** 3 Topics in the critical analysis of normative sexualities and forces shaping US and global cultures.
- 522 Digital Cultures, Digital Divides** 3 Critical analysis of the social and cultural dimensions of the digital divide and use of digital technologies by dominant and subaltern communities.
- 523 Environmental Justice Cultural Studies** 3 Critical analysis of the cultural dimensions of environmental justice and injustice.
- 524 Critical Studies in Popular Culture** 3 Interdisciplinary approaches to historical and contemporary trends and issues in US popular culture.
- 525 Social Movements in American Studies** 3 Theoretical and historical study of the role of social movement in United States culture.
- 526 Contemporary Theories of Race and Ethnicity** 3 Major theoretical readings and key recent texts in U.S. and transnational ethnic studies scholarship.
- 527 Contemporary Feminist Theories and Practices** 3 Major theoretical readings and key recent texts in U.S. and transnational feminist scholarship.
- 590 Seminar in American Studies** 3 May be repeated for credit; cumulative maximum 9 hours. Interdisciplinary topics in American culture.
- 596 Topics in American Studies** 3 May be repeated for credit; cumulative maximum 9 hours. American Studies Summer Institute. (Cross-listed course offered as AMER ST 596, HISTORY 596). Credit not granted for both HISTORY 496 and HISTORY 596.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Animal Sciences

Degree offered: Doctor of Philosophy (Animal Sciences)

Faculty working with graduate students: 20

Graduate students: 31

Graduate students receiving assistantships or scholarships: 93%

Tests required: GRE (Combined), TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Degree requirements are specific to the discipline in which the student is studying.

Program Description

The Department of Animal Sciences is an interdisciplinary department, bringing together expertise from different disciplines for the solution of problems in animal biology and animal production. Research in the department covers a continuum from basic to applied with an emphasis on animal biology. Students may choose to focus on the areas of: nutrition-environmental sciences, reproductive physiology-endocrinology, genetics, animal

breeding, muscle biology, meat science, cell biology, and animal behavior.

Degree Description

Animal Sciences offers graduate work leading to the Doctor of Philosophy degree with a major in animal science. Programs are flexible and designed to meet the needs and interests of the student and, as such, specific degree requirements are determined through individual consultation with an advisor and a special committee. The department maintains herds of dairy cattle, beef cattle, and swine for research and teaching purposes.

Training and Professional Development Opportunities

Graduates from our program are employed in a wide range of careers from applied animal production to teaching and research of molecular mechanisms in domestic and companion animals, as well as humans. Graduate students acquire cutting-edge knowledge and techniques in disciplines that are vital to the improvement of quality of life for animals and humans. Examples of ongoing fundamental research include: the use of mammalian comparative and functional genomics in the search for genes of economic significance including identification of genes involved in disease resistance as well as production traits; understanding molecular events coordinating the physiology of uterine and testis biology using the mouse and domestic ruminants as model organisms; understanding and enhancing skeletal and cardiac muscle growth and development with stem cell and gene therapy approaches; developing deterministic models to evaluate the environmental impact of dairy and beef production systems; and examination of the bovine genome to examine the genetic x nutrition interactions associated with feed efficiency in beef cattle. Examples of important applied research include minimizing the impact of animals on the environment; altering animal nutrition to enhance meat quality; and strategies to understand and enhance animal behavior and well-being. The department's dairy, feedlot, beef cow-calf unit, feed mill, research laboratories, experimental animal building, and meats laboratory provide the foundation for the department's bench-to-application approach. Opportunities: Industry internships NSF IGERT Program: NSPIRE: Nitrogen Systems Policy-oriented Integrated Research and Education

Post-Graduate Employment Opportunities

University faculty, National agricultural laboratories, Postdoctoral positions in prestigious laboratories, Management, allied and agricultural industries ,Extension and technical positions, Teaching positions.

Post-Graduate Career Placements

Research scientist, Agricultural Research Service, Miles City, MT; Research scientist, USDA Human Nutrition Lab, Grand Forks, ND; Faculty Montana State University, Bozeman, MT; Postdoctoral fellow, University of Pennsylvania, Philadelphia; Postdoctoral fellow, EMBRAPA , Concordia, SC, Brazil; International consulting Worldwide Genetic Resources; Technical specialist at Elanco; Research Scientist at Alltech, Inc; International and Biotechnology Postdoctoral fellows; Teaching positions at 4-yr colleges and universities; Animal behavior scientist at Nestle Purina;

Animal Sciences

AS

- 500 Seminar in Animal Sciences 1** May be repeated for credit. Current developments in animal sciences.
- 501 Milk, Meat, and Methane: Contemporary Animal Production Issues 3** Provides knowledge and understanding of livestock issues that affect contemporary livestock production.
- 504 Special Topics V 1-4** May be repeated for credit; cumulative maximum 12 hours.
- 507 Advanced Nutrient Metabolism 3** Advanced topics in metabolic regulation of carbohydrate, fat and amino acid use by animals.
- 510 Digestion and Nutrient Utilization in Animals 3 (2-3)** Gastrointestinal physiology, rate of passage, feed intake regulation, measures of digestibility, starch, fat and nonstarch polysaccharide, and digestion and utilization of nutrients.
- 513 Mineral and Vitamin Metabolism 4** Absorption, excretion, metabolism, dietary requirements and interactions of minerals and vitamins in animals and humans.
- 520 Preparation of Scientific Literature in Animal Sciences 2** Preparation of grant proposals, manuscripts, and literature reviews on research topics.
- 528 Topics in Animal Breeding 2** May be repeated for credit; cumulative maximum 4 hours. Systems of selection and mating for genetic improvement in farm animals.
- 551 Endocrine Physiology 3** Anatomy, physiology, and biochemistry of endocrine systems and hormone action; emphasis on comparative, veterinary, and biomedical models. Credit not granted for both ANIM SCI 451 and ANIM SCI 551.
- 558 Molecular and Cellular Reproduction 3 (2-2)** State of the art concepts of the molecular, cellular, and physiological aspects of mammalian reproduction. (Cross-listed course offered as MBIOS 528, ANIM SCI 558).

- 581 Stem Cell Biology, Therapeutics and Regenerative Medicine** 3 Provides information on the latest cutting edge research in the areas of stem cell biology and tissue regeneration; covers stem cell therapeutics, gene transfer vectors and methods for isolating, characterizing, and generating stem cells. (Course offered as PHARMSCI 581, ANIM SCI 581).
- 582 Seminar in Reproductive Biology** 1 Current developments in reproductive biology.
- 588 Perspectives in Biotechnology** 3 Theory and application of biotechnology in agriculture, industry, and medicine; methodological, environmental, social, and economic concerns. Credit not granted for both ANIM SCI 488 and ANIM SCI 588.
- 598 Advanced Topics in Animal Sciences** V 1-2 May be repeated for credit. Recent research in various disciplines of animal sciences.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Animal Sciences**
- STAT**
- 508 Environmental Spatial Statistics** 3 Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics** 3 May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments** 3 (2-2) Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series** 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis** 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data** 3 Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology** 3 Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists** 3 Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models** 3 (2-2) The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models** 3 Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis** 3 Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing** 3 (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes** 3 Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I** 3 Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II** 3 Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory** 3 Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.

- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 513 Mineral and Vitamin Metabolism** 4 Absorption, excretion, metabolism, dietary requirements and interactions of minerals and vitamins in animals and humans.
- 520 Preparation of Scientific Literature in Animal Sciences** 2 Preparation of grant proposals, manuscripts, and literature reviews on research topics.
- 528 Topics in Animal Breeding** 2 May be repeated for credit; cumulative maximum 4 hours. Systems of selection and mating for genetic improvement in farm animals.
- 551 Endocrine Physiology** 3 Anatomy, physiology, and biochemistry of endocrine systems and hormone action; emphasis on comparative, veterinary, and biomedical models. Credit not granted for both ANIM SCI 451 and ANIM SCI 551.
- 558 Molecular and Cellular Reproduction** 3 (2-2) State of the art concepts of the molecular, cellular, and physiological aspects of mammalian reproduction. (Cross-listed course offered as MBIOS 528, ANIM SCI 558).

- 581 Stem Cell Biology, Therapeutics and Regenerative Medicine** 3 Provides information on the latest cutting edge research in the areas of stem cell biology and tissue regeneration; covers stem cell therapeutics, gene transfer vectors and methods for isolating, characterizing, and generating stem cells. (Course offered as PHARMSCI 581, ANIM SCI 581).
- 582 Seminar in Reproductive Biology** 1 Current developments in reproductive biology.
- 588 Perspectives in Biotechnology** 3 Theory and application of biotechnology in agriculture, industry, and medicine; methodological, environmental, social, and economic concerns. Credit not granted for both ANIM SCI 488 and ANIM SCI 588.
- 598 Advanced Topics in Animal Sciences** V 1-2 May be repeated for credit. Recent research in various disciplines of animal sciences.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Animal Sciences

STAT

- 508 Environmental Spatial Statistics** 3 Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics** 3 May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments** 3 (2-2) Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series** 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis** 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T₂ and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.

- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Anthropology

Degree offered: Doctor of Philosophy (Anthropology)

Faculty working with graduate students: 25

Graduate students: 34

Graduate students receiving assistantships or scholarships: 58%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: January 10

Requirements

Each Anthropology Graduate Program has its own minimum number of required grade credit hours for a PhD
 Archaeology: 56 graded credits
 Cultural Anthropology: 37 graded credits
 Evolutionary Anthropology: 52 graded credits.

Program Description

Anthropology is the study of human diversity in the broadest sense. We ask and attempt to address the most basic questions about the nature or culture, the origins humans, and human variability. Anthropologists study the interactions between our biological heritage and our learned cultural heritages. Anthro-

pologists are important components of management projects that deal with landscape development, human impact studies, cultural resource use, crime scene investigations, and internationalization projects. In addition, anthropologists investigate the unwritten human past that accounts for over 99% of all human existence. Through world class research and instruction the anthropology department at Washington State University seeks to inform the public, students, and the profession on these aspects of human diversity. Many of our students go on to make careers in one of the sub disciplines of anthropology (bioanthropology, archaeology, cultural anthropology, and linguistics). However, many of our students that did not later pursue careers in anthropology tell us that their experiences here greatly enriched their perspectives on life and learning in other fields. Our goal is to continue to pursue an understanding of and to foster a holistic sense of the complex human condition in all of its diversity.

Degree Description

Doctor of Philosophy degrees in Anthropology are offered in archaeology, cultural anthropology and evolutionary anthropology. The Cultural Anthropology program also offers a Peace Corps Master's International Program in Public Health. Our program emphasizes a four-field approach through a series of core classes that all our graduates take in order to establish a solid foundation in Anthropology. Each program area offers specialized courses in methodological, theoretical and regional areas. Please see our departmental website for more information such as application requirements and deadlines, course requirements, and faculty research interests.

Faculty

Robert Ackerman, William Andrefsky, John Bodley, Julia Cassaniti, Mary Collins, Andrew Duff, Melissa Goodman Elgar, Colin Grier, Edward Hagen, Barry Hewlett, Bonnie Hewlett, John Jones, Brian Kemp, Tim Kohler, William Lipe, Karen Lupo, Jeannette-Marie Mageo, Mark Mansperger, Nancy McKee, Courtney Meehan, Luke Premo, Marsha Quinlan, Robert Quinlan, Clare Weber and Steven Weber.

ANTH

- 500 Field Methods V 2** (0-6) to 8 (0-24) Course Prerequisite: By instructor permission. Training in gathering and analyzing field data.
- 501 Verification of Catalog Number** 3 Verification of Catalog Number

- 504 Tribal Peoples and Development** 3 Global and historic perspectives on the complex issues surrounding the problem of tribal peoples and development.
- 507 Advanced Studies in Culture Theory** 3 May be repeated for credit; cumulative maximum 6 hours. Evaluation of major theories and methods and their relationship to problems in cultural-social analysis.
- 510 Fundamentals of Cultural Anthropology** 3 Overview of basic concepts and theory in cultural anthropology based on in-depth analysis of selected theoretical and ethnographic materials.
- 513 Lithic Technological Organization** 4 (3-3) Methods and theory of lithic technology.
- 514 Ceramic Analysis** 4 (3-3) Basic concepts, methods, and approaches used in the analysis of archaeological pottery.
- 519 International Development and Human Resources** 3 History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 521 Psychological Anthropology** 3 Psychological and anthropological aspects of personhood, self, human development, gender, sexuality, emotion and cognition in various cultures.
- 528 Historical Ethnography** 3 May be repeated for credit; cumulative maximum 9 hours. Culture history, ethnography, theoretical, and contemporary problems of selected culture areas.
- 529 Seminar in Ethnography** 3 Methodological, stylistic and craft issues in the process and product of ethnography.
- 530 Archaeological Method and Theory** 3 History of archaeological method and theory; analysis of current literature.
- 535 Cultural Resource Management** 3 Role of archaeology in historic preservation and resource conservation; legal and institutional frameworks; research and interpretation in a CRM context.
- 537 Quantitative Methods in Anthropology** 4 (3-3) May be repeated for credit; cumulative maximum 8 hours. Sampling, exploratory data analysis, inferential statistics, and use of SAS in anthropological research with emphasis on archaeology.
- 539 Prehistory of the Southwest** 3 Prehistory of the American Southwest; emphasis on Pueblo, Mogollon and Hohokam traditions and relationships to historic native groups.
- 540 Prehistory of the Northwest Coast** 3 Prehistoric cultures, chronologies, and interrelationships on the northwest coast of North America.
- 543 Prehistory of the Plateau and Basin** 3 Archaeology of the interior Northwest and Great Basin.
- 546 Complexity in Small Scale Societies** 3 Seminar focused on classic literature and current issues relevant to complexity in small scale societies, predominately covering hunter-gatherer systems. Recommended preparation: ANTH 530.
- 547 Models and Simulation** 3 Models and model-building as an anthropological approach to present and past cultures.

- 548 Hunters and Gatherers: Past and Present** 3 Introduction to hunter-gatherer studies in anthropology and archaeology exploring uses of evolutionary approaches to modeling and reconstructing hunter-gatherer behavior in contemporary and prehistoric contexts.
- 549 Settlement and Agro-Pastoralism** 3 Development of settled communities and food production through evaluation of their social, economic and spatial configurations. Recommended preparation: ANTH 530.
- 550 Descriptive Linguistics** 3 Introduction to analysis and description of natural languages; phonological, syntactic, and semantic analysis of data from a variety of languages. (Cross-listed course offered as ANTH 450, FOR LANG 450).
- 554 Anthropological Field Methods Seminar** 3 Elicitation, recording techniques and analysis of sociocultural and linguistic field data. Recommended preparation: ANTH 450 or 550.
- 561 Current Trends in Physical Anthropology** 3 May be repeated for credit. Intensive review of major current trends in physical anthropology. Recommended preparation: ANTH 465.
- 562 Evolutionary Method and Theory in Anthropology and Archaeology** 3 A graduate-level seminar-based course focusing on the evolutionary analysis of past and present human behavior.
- 563 Anthropology of Life and Death** 3 Demography, dynamics of evolution, human ecology, and their relationships to the biology of living, historical, and archaeological populations. Credit not granted for both ANTH 463 and ANTH 563. Recommended preparation: ANTH 260.
- 564 Advances in Evolution and Human Behavior** 3 Recent trends in the study of evolution and human behavior.
- 565 Human Evolution** 3 Human origins in the light of the fossil record and evolutionary theory. Credit not granted for both ANTH 465 and ANTH 565. Recommended preparation: ANTH 260.
- 567 Primate Behavioral Ecology** 3 Seminar-based course focusing on evolutionary analysis of primate behavior, morphology and ecology.
- 569 Evolutionary Cultural Anthropology** 3 Evolutionary nature of culture and its interactions with human biology (genes) and ecology.
- 570 Sediments in Geoarchaeology** 4 (3-3) Sediment-forming processes, sedimentological techniques, reconstruction of Quaternary environments, and sedimentology of site-forming processes.
- 573 Zooarchaeology** 4 (2-6) Identification of animal bones from archaeological sites, methodological and theoretical techniques for interpreting faunal remains.
- 576 Palynology** 4 (3-3) Pollen and spore morphology, evolution, production, dispersal, and preservation; index fossils, dating, archaeology, and vegetational history. Field trip required.
- 581 Comparative Biology of Social Traditions** 3 Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 591 Special Topics in Anthropology** 3 May be repeated for credit; cumulative maximum 9 hours. Examination of current areas of anthropological theory and research.
- 593 Publishing and Professional Communication** 3 Preparation of original research reports; survey of types of professional communication, and of standards and techniques.
- 596 IPEM Seminar** 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 598 Advanced Anthropology Internship** V 1-15 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: By instructor permission. Participation as archaeological or cultural anthropological intern in public or private sectors; requires special arrangement with faculty advisor.
- 599 Archaeological Field School** V 2-8 Course Prerequisite: By instructor permission. Training in methods of archaeological data recovery and analysis.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Anthropology

Degree offered: Master of Arts in Anthropology

Faculty working with graduate students: 24

Apparel, Merchandising, Design, and Textiles

Degree offered: Master of Arts in Apparel, Merchandising, Design, and Textiles

Faculty working with graduate students: 5

Graduate students: 10

Graduate students receiving assistantships or scholarships: 60%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

For students doing a thesis, a minimum of 24 graded credit hours are required. For students doing a project, a minimum of 30

graded credits are required.

Program Description

Washington State University offers a dynamic Master of Arts Program in Apparel, Merchandising, and Textiles. Opportunities available with the AMDT Master's program include individualized, in-depth programs of study; nationally and internationally recognized faculty; faculty research grants to support students; publications in refereed research journals; designs and creative work in juried exhibits; competitive assistantships; and graduate internships. The master's program provides students with opportunities to pursue research through the completion of a thesis or project. Research areas for a thesis or project include Apparel Product Development; Consumer Studies; Creative Scholarship and Design; and Merchandising. Graduates compete in a dynamic and expanding marketplace. The state of Washington is ranked fourth in the nation in apparel and textile industry productivity, which creates considerable opportunity for industry-related scholarship and career development (Enterprise Seattle). The AMDT Master's program helps students become more competitive when entering the apparel and textile industry and for those students interested in continuing on to a doctoral program a strong research foundation is created.

Degree Description

Graduate Program Specifics General Program Timeline: Semester 1: The area of study and major professor are chosen; Semester 2: The Program of Study and AMDT Graduate Committee are chosen and thesis or project work begins; Semester 3: Thesis or project work continues; Semester 4: Thesis or project is finalized, you defend your work to your committee and a manuscript is prepared for possible publication WSU graduate requirements include a minimum of 30 credits of which 21 credits for thesis or 26 credits for project are graded courses. The program may also include up to 10 credits of supporting coursework and no more than 6 credits of 300-400 level courses for thesis work, 9 credits for project work or a total of 10 credits for transfer work. Timing varies per student but averages two years. Students taking background courses may take longer. Typically students complete 10-18 credit hours per semester (the average is 12, which is also a required minimum for international students). The courses listed below are areas of study that graduate students must show competency (through an undergraduate degree or industry experience) in order to earn their degree. Option Course Title Hours Semester All AMT 210 Textile Specifications All AMT 314 Fashion Forecasting Design AMT 311 Draping and Flat Pattern Design AMT 312 Fitting and Human Form Merch AMT 450 Strategy Planning and Decision Making Required Core: 19 credits AMT 508, 3 credit, Theoretical Frameworks Underlying Scholarship**AMT 517, 3 credit, Critical Perspectives on Appearance**AMT 518, 3 credit, Apparel Merchandising Analysis AMT 519, 3 credit, Research Methods**AMT 520, 3 credit, Aesthetic Analysis of Fashion Design ED PSY 508, 4 credit, Educational Statistics Complete Master's Scholarship: 5 credits minimum*AMT 700 Master's Research, Thesis, and/or Examination or*AMT 702 Master's Special Problems, Directed Study and/or Examination Select 2-7 additional credits to reach minimum total of 21 (thesis) or 26 (project) graded credits and cumulative total of 30 credits. *Washington State University supports both the master's thesis option and master's project option. Please refer to graduate school regulations when choosing an option. Anyone considering additional graduate study as in a doctoral degree, is expected to

select the thesis option.**These courses are offered every two years.

STAT

- 412 Statistical Methods in Research I** 3 Course Prerequisite: STAT 212, MATH 140, 171, or 202. Intermediate statistical methods, design and analysis of research studies: completely randomized and randomized block designs, multiple regression, categorical data analysis.
- 508 Theoretical Frameworks Underlying Scholarship** 3 Exploration of current topics through readings in apparel, merchandising, and textiles.
- 512 Apparel Design Graduate Studio** 3 Course Prerequisite: AMDT 508. Integration of consumer demand target market research with the development, application, and testing of prototype products for specific end uses.
- 517 Theory and Methods of Culture, Gender and Dress** 3 Exploration of appearance issues, theory, and research from the perspective of social science, feminist theory, post-modern and poststructural discourses.
- 518 Apparel Merchandising Analysis** 3 Analysis of marketing and retailing strategies, trends and technological developments in relation to business and consumer aspects within a global context.
- 519 Research Methods** 3 Course Prerequisite: AMDT 508 or concurrent enrollment. Analysis and understanding of research methods, exploration of thesis topic as applicable to the fields of apparel, merchandising, design and textiles.
- 520 Aesthetic Analysis of Fashion Design** 3 In-depth analysis of apparel fashion design provided through exploration of aesthetic and human perception theories within a socio-historic context.

- 596 Advanced Instructional Practicum 3** Information and direction for graduate student teaching assistants seeking professional development in classroom teaching.
- 598 Topics in Apparel and Textiles V 1-3** May be repeated for credit; cumulative maximum 8 hours. Current topics in apparel and textile theory and research.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction: application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.

- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Apparel, Merchandising, Design, and Textiles

Degree offered: Master of Arts in Apparel, Merchandising, Design, and Textiles – Non Thesis

Faculty working with graduate students: 8

Graduate students: 10

Graduate students receiving assistantships or scholarships: 70%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

Washington State University offers a dynamic Master of Arts Program in Apparel, Merchandising, and Textiles. Opportunities available with the AMDT Master's program include individualized, in-depth programs of study; nationally and internationally recognized faculty; faculty research grants to support students; publications in refereed research journals; designs and creative work in juried exhibits; competitive assistantships; and graduate internships. The master's program provides students with opportunities to pursue research through the completion of a thesis or project. Research areas for a thesis or project include Apparel Product Development; Consumer Studies; Creative Scholarship and Design; and Merchandising. Graduates compete in a dynamic and expanding marketplace. The state of Washington is ranked fourth in the nation in apparel and textile industry productivity, which creates considerable opportunity for industry-related scholarship and career development (Enterprise Seattle). The AMDT Master's program helps students become more competitive when entering the apparel and textile industry and for those students interested in continuing on to a doctoral program a strong research foundation is created.

Degree Description

Students pursue research through the completion of a project.

Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models** 3 (2-2) The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models** 3 Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis** 3 Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing** 3 (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes** 3 Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I** 3 Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II** 3 Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory** 3 Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data** 3 Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control** 3 Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability** 3 Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.

- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Applied Economics

Degree offered: Master of Science in Applied Economics

Faculty working with graduate students: 24

Graduate students: 17

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), TOEFL

Deadline: Fall: January 10

Program Description

The M.S. in Applied Economics program provides strong foundations in economic theory, quantitative methods, applications, communication skills, and research analysis. Students can focus their studies in general economics, agribusiness, or agricultural and resource economics by carefully selecting supporting and elective courses.

Degree Description

The M.S. in Applied Economics program provides strong foundations in economic theory, quantitative methods, applications, communication skills, and research analysis. Students can focus their studies in general economics, agribusiness, or agricultural and resource economics by carefully selecting supporting and elective courses. Students can earn an M.S. in Applied Economics to specifically prepare for positions in private corporations and government service as management specialists, policy analysts, forecasters or economic consultants. Two options are offered in the degree--thesis and non-thesis. This degree can be completed by well-prepared students in two years or less.

Training and Professional Development Opportunities

None

Post-Graduate Employment Opportunities

Management Specialists, Policy Analysts, Forecasters, Economic Consultants

Post-Graduate Career Placements

Statistician, USDA, Analyst for NTS Communications, Real Estate Economist, Dept. of Housing and Urban Development

ECONS

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making 3** Managerial economics with specific applications to agricultural issues.

- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I 3** Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II 3** Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V 1-2** May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Applied Economics

Degree offered: Master of Science in Applied Economics – Non Thesis

Faculty working with graduate students: 22

Graduate students: 17

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), TOEFL

Deadline: Fall: January 10

Requirements

Final Oral Examination For non-thesis option, must complete additional graded elective course, Statement of Purpose, 3 letters of recommendation, CV, GRE

Program Description

The M.S. in Applied Economics program provides strong foundations in economic theory, quantitative methods, applications, communication skills, and research analysis. Students can focus their studies in general economics, agribusiness, or agricultural and resource economics by carefully selecting supporting and elective courses.

Degree Description

The M.S. in Applied Economics program provides strong foundations in economic theory, quantitative methods, applications, communication skills, and research analysis. Students can focus their studies in general economics, agribusiness, or agricultural and resource economics by carefully selecting supporting and

elective courses. Students can earn an M.S. in Applied Economics to specifically prepare for positions in private corporations and government service as management specialists, policy analysts, forecasters or economic consultants. Two options are offered in the degree--thesis and non-thesis. This degree can be completed by well-prepared students in two years or less.

Training and Professional Development Opportunities

None

Post-Graduate Employment Opportunities

Management Specialists, Policy Analysts, Forecasters, Economic Consultants

Post-Graduate Career Placements

Statistician, USDA, Analyst for NTS Communications, Real Estate Economist, Dept of Housing and Urban Development

Faculty

Raymond Batina, Kenneth Casavant, Andrew Cassey, Seung Choi, Hayley Chouinard, Benjamin Cowan, Ana Espino-la-Arredondo, Gregmar Galinato, Rosa Gallardo, Mark Gibson, Bidisha Mandal, Thomas Marsh, Jill McCluskey, Vicki McCracken, R Mittelhammer, Felix Munoz-Garcia, Joseph Neibergs, Robert Rosenman, C Shumway, Philip Wandschneider, Jia Yan and Jonathan Yoder.

ECONS

500 Macroeconomic Theory I 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.

501 Microeconomic Theory I 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.

- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making 3** Managerial economics with specific applications to agricultural issues.
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I 3** Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II 3** Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V 1-2** May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).

- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Architecture

Degree offered: Master of Architecture

Faculty working with graduate students: 23

Graduate students: 42

Graduate students receiving assistantships or scholarships: 47%

Tests required: TOEFL, TOEFLI

Deadline: :

Fall: January 10

Requirements

Monograph and public presentation of graduate project. Summer internship/ travel/ independent study.

Program Description

The School of Design and Construction offers the Master of Architecture. This degree is the professional degree accredited by the National Architectural Accrediting Board (NAAB), which allows students to take state exams and become licensed architects. Students must successfully complete a four-year undergraduate degree in architecture, or a previous five-year Bachelor of Architecture degree to be eligible for the Master of Architecture program. Students with baccalaureate degrees in disciplines other than architecture are eligible to apply for the 3.5 year Master of Architecture program. Please consult the WSU Graduate Catalog and/or <http://sdc.wsu.edu/> for specific information regarding this degree as well as admission requirements and course descriptions. The architecture curriculum is planned so that foreign study and other off-campus programs can be incorporated. Foreign studies options include WSU sponsored programs, and programs offered by other institutions. Coordination is through the WSU Education Abroad Office.

Degree Description

M.Arch students engage in studio, site design, technology, history and theory. The culmination of graduate study is a two-semester studio project. The project is expected to be based on a defined hypothesis and demonstrate a comprehensive understanding and solution to a particular architectural issue. There are three tracks for completing the M.Arch. Track 1 is 1.5 years for those with a B.S. in architectural studies from WSU or a professional accredited degree (B.Arch) from a university in the U.S. Track 2 is 2.5 years for those with a four-year, pre-professional architecture degree from a U.S. university or equivalent. Track 2 is also for students who need additional courses or studio work. Track 3 is 3.5 years for those with a non-architecture undergraduate degree. Determination for admission is based upon skills demonstrated through the portfolio.

Training and Professional Development Opportunities

Internship; study abroad.

Post-Graduate Employment Opportunities

Employment in the architecture profession as a licensed architect and/or employment options in fields related to architecture

Post-Graduate Career Placements

ALSC Architects; Callison; NBBJ; NAC; Madsen Mitchell; Clark Kjos Architects; Integrus; MulvannyG2; LRS Architects; OMS; Jon Graves Architects and Planners; Copeland Architects; John Lape; BWA Spokane; Nystrom, Olson, Collins; HKP Architects; KDF Architecture; Erickson McGovern; University of Washington Capital Planning; City of Spokane.

Faculty

John Abell, Kerry Brooks, J Burnett, Rick Cherf, Matthew Cohen, Darrin Griecken, Jason Gruen, David Gunderson, Thomas Heustis, Paul Hirzel, Jolie Kaytes, Bashir Kazimee, Gregory Kessler, William Kirk, Robert Krikac, Matthew Melcher, Taiji Miyasaka, Jason Peschel, Ayad Rahmani, Kathleen Ryan, Ole Sleipness, Judith Theodorson and David Wang.

ARCH

- 510 Architectural Design Studio 6** (0-12) Graduate studio experience researching a single topic of architectural relevance (i.e. geology, material science, biological systems engineering). Field trip required.
- 511 Design VIII/Graduate Design Project 6** (0-12) Course Prerequisite: ARCH 403. Studio course divided between urban design and preliminary design on graduate project.
- 513 Graduate Design Project 6** (0-12) Course Prerequisite: ARCH 511; ARCH 515. Final graduate design studio focusing on individualized topics.
- 515 Research Methods and Programming 3** Exploration of traditional research methods and investigations for architects.
- 520 Directed Topics in Architecture V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Topics related to areas of emphasis in the program and student specialization.
- 525 History and Theory 3** History and theory of 20th century architecture focusing on cultural and philosophical principles related to design.
- 527 Site and Landscape Design 3** Exploration of issues of site context analysis, topography, planning, and landscape design.
- 530 Philosophies and Theories of the Built Environment 3**
Course Prerequisite: Graduate standing in Architecture, Interior Design, or Landscape Architecture. Focus on systematic thought which may describe behavior of the built environment. (Cross-listed course offered as ARCH 530, I D 530, LND ARCH 530).
- 531 Advanced Tectonics 3** Tectonic theory of concrete and metal construction with focus on skin design and technology as formative elements in architecture.
- 540 Research Methods 3** Research methods, from quantitative to technical to philosophical, directed toward qualitative research. (Cross-listed course offered as ARCH 540, I D 540, LND ARCH 540).
- 542 Issues in Architecture 3** Course Prerequisite: ARCH 525. Examination of issues in architecture related to society, culture, environment, politics, and philosophy.
- 560 Interdisciplinary Seminar 3** Explores approaches to design thinking in the topic areas of people and place, history, theory and criticism, and physical design. (Cross-listed course offered as ARCH 560, I D 560, LND ARCH 560).
- 563 Architectural Structures III 3** Course Prerequisite: ARCH 515 or concurrent enrollment. Wind and seismic loads on architectural structures; high-rise systems; reinforced concrete and masonry structures. Credit not granted for both ARCH 463 and ARCH 563.
- 564 Architectural Structures IV 3** Course Prerequisite: ARCH 511 or concurrent enrollment. Deflection theory; classical and computer analysis for statically indeterminate architectural structure systems. Credit not granted for both ARCH 464 and ARCH 564.
- 570 Advanced Architectural Studio/Laboratory 6** (0-12) In-depth study of design problems relating to cultural, environmental, technological and other issues as related to the student's area of emphasis.
- 571 Advanced Architectural Studio II 6** (0-12) Course Prerequisite: ARCH 570. Drawing from architectural historical and theoretical research, urban architectural design case study, research in the arts, humanities and social sciences.
- 573 Ethics and Practice 3** Ethical and professional practice issues related to the business and practice of architecture; investigations into marketing client and business orientation.
- 577 Theories and Methods of Urban Construction 3** Morphology, theoretical concepts, planning and spatial structure of cities and analysis of the transformation of the city core in Europe and America.
- 580 Architecture Internship V** 1-4 May be repeated for credit. Course Prerequisite: Graduate student in M Architecture degree program. Placement in an approved industrial, professional, or governmental situation for specialized or general experience.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination. V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-6 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Bioethics – Cert in Bioethics

Degree offered: Graduate Certificate in Bioethics

Requirements

Please see the program/department for more information.

Contact Information

David Shier
Associate Professor and Chair
Department of Philosophy

Biological and Agricultural Engineering

Degree offered: Doctor of Philosophy (Biological and Agricultural Engineering)

Faculty working with graduate students: 17

Graduate students: 83

Graduate students receiving assistantships or scholarships: 54%

Tests required: TOEFL, TOEFLI, IELTS

Deadline: Fall: January 10
Spring: July 1

Requirements

Two articles, based on doctoral research, must be submitted to a peer reviewed journal. Must present a minimum of two seminars. The first is a brief 25-minute seminar based on the student doctoral research proposal. The second is a 50-minute seminar prior to the final examination.

Program Description

Biological and Agricultural Engineering is a multidisciplinary program that offers students flexibility to accommodate a blend of engineering and science in their programs of study and research projects. Students apply engineering and biological principles to conduct high-quality research and to develop and disseminate knowledge and technologies in the areas of agriculture, food, energy, and natural resource systems. The Department offers Ph.D. and M.S. degrees in Biological and Agricultural Engineering, Ph.D. in Engineering Science, and M.S. in Engineering with four areas of emphasis: a) Food Engineering, b) Bioenergy and Bioproduct Engineering, c) Land, Air, Water Resources and Environmental Engineering, and d) Agricultural Automation Engineering.

Degree Description

The department offers the PhD degree with four research areas of emphasis: Bioenergy and Bioproducts Engineering; Food Engineering; Land, Air, Water Resources and Environmental Engineering; and Agricultural Automation Engineering.

Faculty

Gustavo Barbosa-Canovas, Shulin Chen, Craig Frear, Manuel Garcia-Perez, Gerrit Hoogenboom, Manoj Karkee, Hanwu Lei, Pius Ndegwa, R Peters, Shyam Sablani, Claudio Stockle, Juming Tang, Jeffrey Ullman, Joan Wu, Bin Yang, Usama Zaher and Qin Zhang.

BSYSE

- 512 Research and Teaching Methods 3** (2-3) Graduate research with an emphasis on biological systems engineering and college instruction.
- 530 Machine Vision for Biological Systems 3** Image analysis techniques as applied to machine vision applications integrated into autonomous equipment used in specialty crops.
- 532 Electrohydraulic Systems Control 3** Fluid power transmission, E/H control, control systems and controller design.
- 550 Soil and Water Conservation Engineering 3** Land, water and air conservation emphasizing on soil and water engineering concepts, state of science solution techniques, and engineering design.
- 551 Advanced Biological Systems Engineering Topics V 1-4** May be repeated for credit; cumulative maximum 6 hours. Directed group study of selected advanced topics in biological systems engineering.
- 552 Advanced Biological Systems Engineering Topics V 1-4** May be repeated for credit. Directed group study of selected advanced topics in biological systems engineering.
- 554 Aquatic System Restoration 3** Study of natural, damaged and constructed ecosystems with emphasis on water quality protection and restoration of lakes, rivers, streams and wetlands. (Cross-listed course offered as CE 585, BSYSE 554, ENVR SCI 585). Required preparation must include CHEM 345; MBIOS 101. Required preparation must include CHEM 345; MBIOS 101.
- 555 Natural Treatment Systems 3** Principles and design procedures of natural systems for wastewater treatment for agricultural and non-agricultural applications. (Cross-listed course offered as CE 555, BSYSE 555).

- 556 Surface Hydrologic Processes and Modeling 3** (2-3) Fundamental hydrologic processes, governing equations and solution methods, GIS techniques commonly used in hydrology, class project on modeling surface hydrology.
- 557 Nutrient Cycling and Transport 3** Cycling of carbon, nitrogen and phosphorus at global and watershed scales; modeling of transportation and transport in agricultural systems
- 558 Groundwater Flow and Contaminant Transport 4** (3-3) Physics of flow and contaminant transport in saturated porous media including governing equations, well hydraulics and computer modeling.
- 560 Aquatic Chemistry 3** Chemical principles as applied to natural environmental system, water supply and pollution and control engineering. (Cross-listed course offered as CE 583, BSYSE 560).
- 564 Agricultural Waste and Air Quality Management 3** Detailed analyses of agricultural wastes and their potential adverse impacts on the environment; current management systems; reuse and recycle.
- 581 Advanced Physical Properties of Foods 3** Analysis, modeling, and experimental procedures to measure food physical properties for use in food processing system design.
- 582 Food Process Engineering I 3** Design of food processing systems; design and simulation of sterilization and pasteurization processes in foods.
- 583 Food Process Engineering II 3** Design of food separation unit operations including concentration, dehydration, and membrane processes.
- 584 Thermal and Nonthermal Processing of Foods 3** Food preservation methods based on application of thermal and nonthermal processes.
- 585 Food Packaging 3** Properties of packaging materials, manufacturing of packages, shelf-life testing and food packaging interaction.
- 593 Renewable Energy Technologies 3** Thermochemical biorefinery technologies for biofuels and bioproducts; facility operations, analysis, and design of integrated processes for biofuel and bioproduct production
- 594 Design and Analysis of Biomass Conversion Processes and Systems 3** Analysis of bioprocessing and biotreatment processes including energetics, stoichiometry, species competition, process infiltration, product separation and optimization.
- 595 Biosystems Engineering for Fuel and Chemicals 3** Design and optimization of biological systems for industrial functions, modeling and simulation of cell processes, bioreactors and system integration.
- 596 Biomass Thermo-Chemical Conversion 3** Biomass chemistry, analytical thermo-chemistry, torrefaction, pyrolysis, gasification and combustion; characterization and uses of thermochemical products.
- 597 Biomass Biological Process Engineering 3** Technical issues in the biological process engineering field, commercial application and evaluation of new technologies in resource, environment and economic contexts.
- 598 Graduate Seminar 1** May be repeated for credit. Required of all graduate students in biological systems engineering.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Biological and Agricultural Engineering

Degree offered: Master of Science in Biological and Agricultural Engineering

Faculty working with graduate students: 17

Graduate students: 12

Graduate students receiving assistantships or scholarships: 58%

Tests required: IELTS, TOEFL, TOEFLi

Deadline: Fall: January 10

Spring: July 1

Requirements

A written research proposal must be completed by the end of the third semester.

Program Description

Biological and Agricultural Engineering is a multidisciplinary program that offers students flexibility to accommodate a blend of engineering and science in their programs of study and research projects. Students apply engineering and biological principles to conduct high-quality research and to develop and disseminate knowledge and technologies in the areas of agriculture, food, energy, and natural resource systems. The Department offers Ph.D. and M.S. degrees in Biological and Agricultural Engineering, Ph.D. in Engineering Science, and M.S. in Engineering with four areas of emphasis: a) Food Engineering, b) Bioenergy and Bioproduct Engineering, c) Land, Air, Water Resources and Environmental Engineering, and d) Agricultural Automation Engineering.

Degree Description

The department of Biological Systems Engineering integrates the biological sciences and engineering for the development of engineering solutions to agricultural, food and natural systems.

Gustavo Barbosa-Canovas, Shulin Chen, Craig Frear, Manuel Garcia-Perez, Gerrit Hoogenboom, Manoj Karkee, Hanwu Lei, Pius Ndegwa, R Peters, Shyam Sablani, Claudio Stockle, Juming Tang, Jeffrey Ullman, Joan Wu, Bin Yang, Usama Zaher and Qin Zhang.

BSYSE

- 512 Research and Teaching Methods 3 (2-3)** Graduate research with an emphasis on biological systems engineering and college instruction.
- 530 Machine Vision for Biological Systems 3** Image analysis techniques as applied to machine vision applications integrated into autonomous equipment used in specialty crops.
- 532 Electrohydraulic Systems Control 3** Fluid power transmission, E/H control, control systems and controller design.
- 550 Soil and Water Conservation Engineering 3** Land, water and air conservation emphasizing on soil and water engineering concepts, state of science solution techniques, and engineering design.
- 551 Advanced Biological Systems Engineering Topics V 1-4** May be repeated for credit; cumulative maximum 6 hours. Directed group study of selected advanced topics in biological systems engineering.
- 552 Advanced Biological Systems Engineering Topics V 1-4** May be repeated for credit. Directed group study of selected advanced topics in biological systems engineering.
- 554 Aquatic System Restoration 3** Study of natural, damaged and constructed ecosystems with emphasis on water quality protection and restoration of lakes, rivers, streams and wetlands. (Cross-listed course offered as CE 585, BSYSE 554, ENVR SCI 585). Required preparation must include CHEM 345; MBIOS 101. Required preparation must include CHEM 345; MBIOS 101.
- 555 Natural Treatment Systems 3** Principles and design procedures of natural systems for wastewater treatment for agricultural and non-agricultural applications. (Cross-listed course offered as CE 555, BSYSE 555).
- 556 Surface Hydrologic Processes and Modeling 3 (2-3)** Fundamental hydrologic processes, governing equations and solution methods, GIS techniques commonly used in hydrology, class project on modeling surface hydrology.
- 557 Nutrient Cycling and Transport 3** Cycling of carbon, nitrogen and phosphorus at global and watershed scales; modeling of transportation and transport in agricultural systems
- 558 Groundwater Flow and Contaminant Transport 4 (3-3)** Physics of flow and contaminant transport in saturated porous media including governing equations, well hydraulics and computer modeling.
- 560 Aquatic Chemistry 3** Chemical principles as applied to natural environmental system, water supply and pollution and control engineering. (Cross-listed course offered as CE 583, BSYSE 560).
- 564 Agricultural Waste and Air Quality Management 3** Detailed analyses of agricultural wastes and their potential adverse impacts on the environment; current management systems; reuse and recycle.
- 581 Advanced Physical Properties of Foods 3** Analysis, modeling, and experimental procedures to measure food physical properties for use in food processing system design.
- 582 Food Process Engineering I 3** Design of food processing systems; design and simulation of sterilization and pasteurization processes in foods.
- 583 Food Process Engineering II 3** Design of food separation unit operations including concentration, dehydration, and membrane processes.
- 584 Thermal and Nonthermal Processing of Foods 3** Food preservation methods based on application of thermal and nonthermal processes.
- 585 Food Packaging 3** Properties of packaging materials, manufacturing of packages, shelf-life testing and food packaging interaction.
- 593 Renewable Energy Technologies 3** Thermochemical biorefinery technologies for biofuels and bioproducts; facility operations, analysis, and design of integrated processes for biofuel and bioproduct production
- 594 Design and Analysis of Biomass Conversion Processes and Systems 3** Analysis of bioprocessing and biotreatment processes including energetics, stoichiometry, species competition, process infiltration, product separation and optimization.
- 595 Biosystems Engineering for Fuel and Chemicals 3** Design and optimization of biological systems for industrial functions, modeling and simulation of cell processes, bioreactors and system integration.
- 596 Biomass Thermo-Chemical Conversion 3** Biomass chemistry, analytical thermo-chemistry, torrefaction, pyrolysis, gasification and combustion; characterization and uses of thermochemical products.
- 597 Biomass Biological Process Engineering 3** Technical issues in the biological process engineering field, commercial application and evaluation of new technologies in resource, environment and economic contexts.
- 598 Graduate Seminar 1** May be repeated for credit. Required of all graduate students in biological systems engineering.

- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

- 597 Biomass Biological Process Engineering** 3 Technical issues in the biological process engineering field, commercial application and evaluation of new technologies in resource, environment and economic contexts.
- 598 Graduate Seminar** 1 May be repeated for credit. Required of all graduate students in biological systems engineering.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Biology

Degree offered: Master of Science in Biology – Non Thesis

Faculty working with graduate students: 33

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: September 1

Requirements

12 credits of Biol 500 level prefix courses 1 credit of Biol 589 seminar

Program Description

This degree is generally meant for students who wish to pursue careers in education that require graduate degrees but not research experience. Thus, this degree does not require a research thesis.

Degree Description

The plan for the non-thesis MS in Biology is all coursework related. A minimum of 26 graded credits is required.

Faculty

John Bishop, R Black, Jesse Brunner, Jeremiah Busch, Patrick Carter, Asaph Cousins, Erica Crespi, Mark Dybdahl, Gerald Edwards, Raymond Evans, Richard Gomulkiewicz, Hanjo Hellmann, Larry Hufford, Brian Kemp, Michael Knoblauch, Raymond Lee, Norman Lewis, Richard Mack, Jon Mallatt, Andrew McCubbin, Michelle McGuire, Jeb Owen, Christine Portfors, Eric Roalson, Charles Robbins, Hubertus Schwabl, Elissa Schwartz, Michael Skinner, William Snyder, Andrew Storfer, Mechthild Tegeder, Gary Thorgaard and Paul Verrell.

BIOL

- 500 Seminar 1** May be repeated for credit.
- 501 Proposal Defense Seminar 2** Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.
- 504 Experimental Methods in Plant Physiology 3 (2-3)** Advanced techniques and instrumental methods applicable to research in plant physiology.
- 509 Plant Anatomy 4 (2-6)** Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.
- 512 Molecular Mechanisms of Plant Development 3** Physiology of growth; metabolism during development and reproduction.
- 513 Plant Metabolism 3** Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.
- 514 Fish Genetics 2** Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.
- 517 Stress Physiology of Plants 3** Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.
- 519 Introduction to Population Genetics 3** Survey of basic population and quantitative genetics.
- 520 Conservation Genetics 2** Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.
- 521 Quantitative Genetics 3** Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.
- 531 Principles of Systematic Biology 3** Systematic theory; history and current views; approaches to phylogenetic analysis and classification.
- 533 Modern Methods in Phylogenetics 4 (2-6)** Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.
- 537 Plant Cell Biology 3** Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.
- 540 Stable Isotope Theory and Methods 3 (2-3)** Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 548 Evolutionary Ecology of Populations 3** Evolutionary dynamics of natural populations and the co-evolution of species.
- 556 Biochemical Adaptation 3** Relationships between enzyme/macromolecule adaptation and animal performance.
- 559 Hormones, Brain and Behavior 3** Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.
- 560 Plant Ecophysiology 3** Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.
- 561 Environmental Physiology 3** Individual and evolutionary adaptations to changing environments with emphasis on recent literature.
- 562 Community Ecology 3** Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.
- 563 Field Ecology 2 (0-6)** Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.
- 564 Molecular Ecology and Phylogeography 3** Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.
- 565 Ecology and Evolution of Disease 3** Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.
- 566 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 567 Ecological Restoration 3** Introduction to major issues in restoration ecology; major ecological dimensions of restoration.
- 568 Conservation Ecology 3** Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.

- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4 (3-3)**
Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.
- 575 Systems Biology of Reproduction 3** Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.
- 576 Epigenetics and Systems Biology 3** Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing 2** Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching 2** Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I 1** May be repeated for credit. Literature and problems.
- 597 Teaching Practicum V 1-4** May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Biotechnology Management – Cert in Biotech Management

Degree offered: Graduate Certificate in Biotechnology Management

Botany

Degree offered: Doctor of Philosophy (Botany)

Faculty working with graduate students: 16

Graduate students: 20

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), TOEFL, TOEFLI

Deadline: Fall: January 10
Spring: September 1

Requirements

Proposal defense Exit seminar

Program Description

The School of Biological Sciences offers a rigorous and competitive degree in Botany. Students who complete this degree are successful in a broad variety of careers, including those in: research universities, teaching colleges, federal and state government and the private sector.

Degree Description

Our botany students generally focus on research in the broad areas of plant physiology, ecology, evolution, systematics, and molecular biology.

Training and Professional Development Opportunities

Our program offers teaching training and grant writing courses. Other professional development opportunities include weekly reading groups, ecolunch meetings, a graduate student research symposium and frequent graduate seminars.

Post-Graduate Employment Opportunities

Most students continue into postdoctoral research positions. Other students pursue careers at community colleges or in Federal or State governments.

Post-Graduate Career Placements

Recent graduates have obtained faculty positions at: Cornell University, University of California- Bakersfield, University of Arizona, Purdue University, and Eastern Washington University. Others hold jobs with: US Forest Service, USDA, Battelle Pacific Northwest Laboratories, the Marine Selby Botanical Gardens and the Florida Museum of Natural History.

ANTH

- 500 Field Methods V 2** (0-6) to 8 (0-24) Course Prerequisite: By instructor permission. Training in gathering and analyzing field data.
- 501 Verification of Catalog Number 3** Verification of Catalog Number
- 504 Tribal Peoples and Development 3** Global and historic perspectives on the complex issues surrounding the problem of tribal peoples and development.
- 507 Advanced Studies in Culture Theory 3** May be repeated for credit; cumulative maximum 6 hours. Evaluation of major theories and methods and their relationship to problems in cultural-social analysis.
- 510 Fundamentals of Cultural Anthropology 3** Overview of basic concepts and theory in cultural anthropology based on in-depth analysis of selected theoretical and ethnographic materials.
- 513 Lithic Technological Organization 4** (3-3) Methods and theory of lithic technology.
- 514 Ceramic Analysis 4** (3-3) Basic concepts, methods, and approaches used in the analysis of archaeological pottery.
- 519 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 521 Psychological Anthropology 3** Psychological and anthropological aspects of personhood, self, human development, gender, sexuality, emotion and cognition in various cultures.
- 528 Historical Ethnography 3** May be repeated for credit; cumulative maximum 9 hours. Culture history, ethnography, theoretical, and contemporary problems of selected culture areas.
- 529 Seminar in Ethnography 3** Methodological, stylistic and craft issues in the process and product of ethnography.
- 530 Archaeological Method and Theory 3** History of archaeological method and theory; analysis of current literature.
- 535 Cultural Resource Management 3** Role of archaeology in historic preservation and resource conservation; legal and institutional frameworks; research and interpretation in a CRM context.
- 537 Quantitative Methods in Anthropology 4** (3-3) May be repeated for credit; cumulative maximum 8 hours. Sampling, exploratory data analysis, inferential statistics, and use of SAS in anthropological research with emphasis on archaeology.
- 539 Prehistory of the Southwest 3** Prehistory of the American Southwest; emphasis on Pueblo, Mogollon and Hohokam traditions and relationships to historic native groups.
- 540 Prehistory of the Northwest Coast 3** Prehistoric cultures, chronologies, and interrelationships on the northwest coast of North America.
- 543 Prehistory of the Plateau and Basin 3** Archaeology of the interior Northwest and Great Basin.

- 546 Complexity in Small Scale Societies 3** Seminar focused on classic literature and current issues relevant to complexity in small scale societies, predominately covering hunter-gatherer systems. Recommended preparation: ANTH 530.
- 547 Models and Simulation 3** Models and model-building as an anthropological approach to present and past cultures.
- 548 Hunters and Gatherers: Past and Present 3** Introduction to hunter-gatherer studies in anthropology and archaeology exploring uses of evolutionary approaches to modeling and reconstructing hunter-gatherer behavior in contemporary and prehistoric contexts.
- 549 Settlement and Agro-Pastoralism 3** Development of settled communities and food production through evaluation of their social, economic and spatial configurations. Recommended preparation: ANTH 530.
- 550 Descriptive Linguistics 3** Introduction to analysis and description of natural languages; phonological, syntactic, and semantic analysis of data from a variety of languages. (Cross-listed course offered as ANTH 450, FOR LANG 450).
- 554 Anthropological Field Methods Seminar 3** Elicitation, recording techniques and analysis of sociocultural and linguistic field data. Recommended preparation: ANTH 450 or 550.
- 561 Current Trends in Physical Anthropology 3** May be repeated for credit. Intensive review of major current trends in physical anthropology. Recommended preparation: ANTH 465.
- 562 Evolutionary Method and Theory in Anthropology and Archaeology 3** A graduate-level seminar-based course focusing on the evolutionary analysis of past and present human behavior.
- 563 Anthropology of Life and Death 3** Demography, dynamics of evolution, human ecology, and their relationships to the biology of living, historical, and archaeological populations. Credit not granted for both ANTH 463 and ANTH 563. Recommended preparation: ANTH 260.
- 564 Advances in Evolution and Human Behavior 3** Recent trends in the study of evolution and human behavior.
- 565 Human Evolution 3** Human origins in the light of the fossil record and evolutionary theory. Credit not granted for both ANTH 465 and ANTH 565. Recommended preparation: ANTH 260.
- 567 Primate Behavioral Ecology 3** Seminar-based course focusing on evolutionary analysis of primate behavior, morphology and ecology.
- 569 Evolutionary Cultural Anthropology 3** Evolutionary nature of culture and its interactions with human biology (genes) and ecology.
- 570 Sediments in Geoarchaeology 4 (3-3)** Sediment-forming processes, sedimentological techniques, reconstruction of Quaternary environments, and sedimentology of site-forming processes.
- 573 Zooarchaeology 4 (2-6)** Identification of animal bones from archaeological sites, methodological and theoretical techniques for interpreting faunal remains.
- 576 Palynology 4 (3-3)** Pollen and spore morphology, evolution, production, dispersal, and preservation; index fossils, dating, archaeology, and vegetational history. Field trip required.
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 591 Special Topics in Anthropology 3** May be repeated for credit; cumulative maximum 9 hours. Examination of current areas of anthropological theory and research.
- 593 Publishing and Professional Communication 3** Preparation of original research reports; survey of types of professional communication, and of standards and techniques.
- 596 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 598 Advanced Anthropology Internship V 1-15** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: By instructor permission. Participation as archaeological or cultural anthropological intern in public or private sectors; requires special arrangement with faculty advisor.
- 599 Archaeological Field School V 2-8** Course Prerequisite: By instructor permission. Training in methods of archaeological data recovery and analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- BIOL**
- 500 Seminar 1** May be repeated for credit.
- 501 Proposal Defense Seminar 2** Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.

- 504 Experimental Methods in Plant Physiology 3 (2-3)** Advanced techniques and instrumental methods applicable to research in plant physiology.
- 509 Plant Anatomy 4 (2-6)** Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.
- 512 Molecular Mechanisms of Plant Development 3** Physiology of growth; metabolism during development and reproduction.
- 513 Plant Metabolism 3** Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.
- 514 Fish Genetics 2** Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.
- 517 Stress Physiology of Plants 3** Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.
- 519 Introduction to Population Genetics 3** Survey of basic population and quantitative genetics.
- 520 Conservation Genetics 2** Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.
- 521 Quantitative Genetics 3** Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.
- 531 Principles of Systematic Biology 3** Systematic theory; history and current views; approaches to phylogenetic analysis and classification.
- 533 Modern Methods in Phylogenetics 4 (2-6)** Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.
- 537 Plant Cell Biology 3** Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.
- 540 Stable Isotope Theory and Methods 3 (2-3)** Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 548 Evolutionary Ecology of Populations 3** Evolutionary dynamics of natural populations and the co-evolution of species.
- 556 Biochemical Adaptation 3** Relationships between enzyme/macromolecule adaptation and animal performance.
- 559 Hormones, Brain and Behavior 3** Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.
- 560 Plant Ecophysiology 3** Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.
- 561 Environmental Physiology 3** Individual and evolutionary adaptations to changing environments with emphasis on recent literature.
- 562 Community Ecology 3** Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.
- 563 Field Ecology 2 (0-6)** Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.
- 564 Molecular Ecology and Phylogeography 3** Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.
- 565 Ecology and Evolution of Disease 3** Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.
- 566 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 567 Ecological Restoration 3** Introduction to major issues in restoration ecology; major ecological dimensions of restoration.
- 568 Conservation Ecology 3** Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.
- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4 (3-3)** Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.
- 575 Systems Biology of Reproduction 3** Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.

- 576 Epigenetics and Systems Biology 3** Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing 2** Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching 2** Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I 1** May be repeated for credit. Literature and problems.
- 597 Teaching Practicum V 1-4** May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- E MIC**
- 586 Special Projects in Electron Microscopy V 2 (0-6) to 3 (0-9)** May be repeated for credit. Practical training in one or more areas of electron microscopy; TEM, SEM, ultramicrotomy, specimen processing; confocal fluorescent microscopy.
- 587 Special Topics in Electron Microscopy 1** May be repeated for credit; cumulative maximum 4 hours.
- Molecular Plant Sciences**
- MPS**
- 515 Seminar in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 525 Plant Molecular Genetics 3** Introduction to plant genome organization and gene expression while acquiring knowledge of modern molecular techniques and experimental approaches.
- 561 Biochemical Signaling in Plants, Animals and Microorganisms 3** Course Prerequisite: MBIOS 513. New research on intra and extra cellular biochemical signaling, including communication in plants and hormone action in animals. (Cross-listed course offered as MBIOS 561, MPS 561).
- 570 Advanced Topics in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 3 hours. Oral presentation of a current research paper.
- 587 Advanced Topics in Plant Biochemistry 3** Course Prerequisite: MBIOS 514. Same as MBIOS 571.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

700 Master's Research, Dissertation and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

800 Doctoral Research, Dissertation and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Natural Resource Sciences

NATRS

- 519 Advanced Topics V 1-3** May be repeated for credit; cumulative maximum 6 hours.
- 535 Wildlife Ecology 4 (3-3)** The ecology of wildlife species and the contributing biological processes. Overnight field trip required.
- 550 Conservation Biology 3** Patterns of biological diversity, factors producing changes in diversity, values of diversity, management principles applied to small populations, protected areas, landscape linkages, biotic integrity, restoration, legal issues and funding sources. Credit not granted for both NATRS 450 and NATRS 550.
- 554 Restoration Ecology 3 (2-3)** Ecological principles used to restore biological communities; ecological processes and species on degraded landscapes. Credit not granted for both NATRS 454 and NATRS 554.
- 556 Foraging Ecology of Herbivores 2** Synthesis of foraging behavior concepts including nutritive quality of forages, digestive and metabolic constraints, and diet and habitat selection.
- 560 Watershed Management 3** Principles and practices of management of forest and rangelands for protection, maintenance, and improvement of water resource values. Field trip required. Recommended preparation: NATRS 204 or sufficient background in spreadsheets.
- 564 Landscape Ecology 3 (2-3)** Linkages between spatial patterns and processes in a variety of landscapes and the qualitative tools used in the investigation of these linkages. Credit not granted for both NATRS 464 and NATRS 564.
- 594 Environmental and Natural Resources Issues and Ethics 3** Ethical systems applied to natural resources; issues of professionalism and ethics in natural resource management. (Cross-listed course offered as NATRS 594, ENVR SCI 594).
- 595 Seminar in Natural Resource Sciences 1** May be repeated for credit. Literature review; preparation and presentation of reports in natural resource sciences.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Natural Resource Sciences

SOILS

- 501 Seminar 1** May be repeated for credit. Presentation of research information.
- 502 Advanced Topics in Soils V 1-3** May be repeated for credit; cumulative maximum 6 hours. Interpretation, presentation, and discussion of current research on soils, uses, and management.
- 503 Advanced Soil Analysis V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Soil research techniques; application of modern instrumentation to soil analysis.
- 505 Teaching Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised experience in classroom teaching; classroom preparation for lectures, discussions, laboratories; preparation and grading of exams.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 513 Environmental Soil Physics 3 (2-3)** Physical properties of soils and their relationships to moisture, aeration, and temperature; plant-soil-atmospheric relationships; solute transport and soil salinity. Recommended preparation: SOIL SCI 201 and general physics.
- 514 Environmental Biophysics 2** Physical environment of living organisms (temperature, humidity, radiation, wind); heat and mass exchange and balance in plant and animal systems. Recommended preparation: Introductory biology, physics, and calculus.
- 515 Environmental Biophysics Laboratory 1 (0-3)** Course Prerequisite: Soil Sci 514 or concurrent enrollment. Experimental methods and procedures in environmental measurements; temperature, wind, radiation, and humidity measurements in biological environments.

- 521 Physical Chemistry of Soils 3** Chemical equilibrium and kinetics of soil solution speciation, mineral precipitation and dissolution, adsorption and partitioning reactions, and ion exchange. Soil constituents; soil solutions: mineral equilibria; absorption reactions; acid/base reactions; oxidation-reduction; soil contaminants.
- 531 Soil Microbiology 3 (2-3)** Biology and significance of organisms inhabiting soil and their role in nutrient cycling, ecosystem function, agriculture, and bioremediation.
- 533 Advanced Vadose Processes 2** Methods and models for water, heat, vapor and solute transport in the vadose zone; transfer functions to describe solute transport; non-linear parameter estimation; fate and transport of water, heat, and solutes in the vadose zone; hydrological and geochemical processes in unsaturated subsurface materials. Recommended preparation: upper division or graduate course in soil physics or chemistry.
- 541 Soil-Plant-Microbial Interactions 3** Soil-plant-microbial relationships to plant nutrition, plant health, and environmental cleanup; rhizosphere chemistry and microbial ecology. Required preparation must include two upper-division courses in biology, microbiology or soils.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 547 Soil Fertility Management 3** Philosophy of fertilizer recommendations based on soil and plant tissue testing; principles of fertilizer manufacture, placement and use. Required preparation must include introductory soils and upper-division soil fertility courses.
- 568 ArcGIS and Geospatial Analysis 4 (2-6)** Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 574 Remote Sensing and Geospatial Analysis 3 (1-4)** Digital image processing theory and geographic information systems applied to landscape analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Natural Resource Sciences**
- STAT**
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.

- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Botany

Degree offered: Master of Science in Botany

Faculty working with graduate students: 16

Graduate students: 6

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: September 1

Requirements

Exit seminar

Program Description

The School of Biological Sciences offers a rigorous and competitive degree in Botany. Students who complete this degree are successful in a broad variety of careers, including those in: research universities, teaching colleges, federal and state government and the private sector.

Degree Description

Our botany students generally focus on research in the broad areas of plant physiology, ecology, evolution, systematics, and molecular biology.

Training and Professional Development Opportunities

Our program offers teaching training and grant writing courses. Other professional development opportunities include weekly reading groups, ecolunch meetings, a graduate student research symposium and frequent graduate seminars.

Post-Graduate Employment Opportunities

Most students continue into PhD positions. Other students pursue careers at community colleges, as secondary teachers, or in Federal or State governments.

Faculty

John Bishop, R Black, John Browse, Jeremiah Busch, Lori Carris, Asaph Cousins, Gerald Edwards, Raymond Evans, Hanjo Hellmann, Larry Hufford, Michael Knoblauch, Norman Lewis, Richard Mack, Andrew McCubbin, Eric Roalson and Mechthild Tegeder.

ANTH

- 500 Field Methods V 2** (0-6) to 8 (0-24) Course Prerequisite: By instructor permission. Training in gathering and analyzing field data.
- 501 Verification of Catalog Number** 3 Verification of Catalog Number
- 504 Tribal Peoples and Development** 3 Global and historic perspectives on the complex issues surrounding the problem of tribal peoples and development.
- 507 Advanced Studies in Culture Theory** 3 May be repeated for credit; cumulative maximum 6 hours. Evaluation of major theories and methods and their relationship to problems in cultural-social analysis.
- 510 Fundamentals of Cultural Anthropology** 3 Overview of basic concepts and theory in cultural anthropology based on in-depth analysis of selected theoretical and ethnographic materials.
- 513 Lithic Technological Organization** 4 (3-3) Methods and theory of lithic technology.
- 514 Ceramic Analysis** 4 (3-3) Basic concepts, methods, and approaches used in the analysis of archaeological pottery.
- 519 International Development and Human Resources** 3 History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 521 Psychological Anthropology** 3 Psychological and anthropological aspects of personhood, self, human development, gender, sexuality, emotion and cognition in various cultures.
- 528 Historical Ethnography** 3 May be repeated for credit; cumulative maximum 9 hours. Culture history, ethnography, theoretical, and contemporary problems of selected culture areas.
- 529 Seminar in Ethnography** 3 Methodological, stylistic and craft issues in the process and product of ethnography.
- 530 Archaeological Method and Theory** 3 History of archaeological method and theory; analysis of current literature.
- 535 Cultural Resource Management** 3 Role of archaeology in historic preservation and resource conservation; legal and institutional frameworks; research and interpretation in a CRM context.
- 537 Quantitative Methods in Anthropology** 4 (3-3) May be repeated for credit; cumulative maximum 8 hours. Sampling, exploratory data analysis, inferential statistics, and use of SAS in anthropological research with emphasis on archaeology.
- 539 Prehistory of the Southwest** 3 Prehistory of the American Southwest; emphasis on Pueblo, Mogollon and Hohokam traditions and relationships to historic native groups.
- 540 Prehistory of the Northwest Coast** 3 Prehistoric cultures, chronologies, and interrelationships on the northwest coast of North America.
- 543 Prehistory of the Plateau and Basin** 3 Archaeology of the interior Northwest and Great Basin.
- 546 Complexity in Small Scale Societies** 3 Seminar focused on classic literature and current issues relevant to complexity in small scale societies, predominately covering hunter-gatherer systems. Recommended preparation: ANTH 530.
- 547 Models and Simulation** 3 Models and model-building as an anthropological approach to present and past cultures.
- 548 Hunters and Gatherers: Past and Present** 3 Introduction to hunter-gatherer studies in anthropology and archaeology exploring uses of evolutionary approaches to modeling and reconstructing hunter-gatherer behavior in contemporary and prehistoric contexts.
- 549 Settlement and Agro-Pastoralism** 3 Development of settled communities and food production through evaluation of their social, economic and spatial configurations. Recommended preparation: ANTH 530.
- 550 Descriptive Linguistics** 3 Introduction to analysis and description of natural languages; phonological, syntactic, and semantic analysis of data from a variety of languages. (Cross-listed course offered as ANTH 450, FOR LANG 450).
- 554 Anthropological Field Methods Seminar** 3 Elicitation, recording techniques and analysis of sociocultural and linguistic field data. Recommended preparation: ANTH 450 or 550.
- 561 Current Trends in Physical Anthropology** 3 May be repeated for credit. Intensive review of major current trends in physical anthropology. Recommended preparation: ANTH 465.
- 562 Evolutionary Method and Theory in Anthropology and Archaeology** 3 A graduate-level seminar-based course focusing on the evolutionary analysis of past and present human behavior.

- 563 Anthropology of Life and Death 3** Demography, dynamics of evolution, human ecology, and their relationships to the biology of living, historical, and archaeological populations. Credit not granted for both ANTH 463 and ANTH 563. Recommended preparation: ANTH 260.
- 564 Advances in Evolution and Human Behavior 3** Recent trends in the study of evolution and human behavior.
- 565 Human Evolution 3** Human origins in the light of the fossil record and evolutionary theory. Credit not granted for both ANTH 465 and ANTH 565. Recommended preparation: ANTH 260.
- 567 Primate Behavioral Ecology 3** Seminar-based course focusing on evolutionary analysis of primate behavior, morphology and ecology.
- 569 Evolutionary Cultural Anthropology 3** Evolutionary nature of culture and its interactions with human biology (genes) and ecology.
- 570 Sediments in Geoarchaeology 4 (3-3)** Sediment-forming processes, sedimentological techniques, reconstruction of Quaternary environments, and sedimentology of site-forming processes.
- 573 Zooarchaeology 4 (2-6)** Identification of animal bones from archaeological sites, methodological and theoretical techniques for interpreting faunal remains.
- 576 Palynology 4 (3-3)** Pollen and spore morphology, evolution, production, dispersal, and preservation; index fossils, dating, archaeology, and vegetational history. Field trip required.
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 591 Special Topics in Anthropology 3** May be repeated for credit; cumulative maximum 9 hours. Examination of current areas of anthropological theory and research.
- 593 Publishing and Professional Communication 3** Preparation of original research reports; survey of types of professional communication, and of standards and techniques.
- 596 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 598 Advanced Anthropology Internship V 1-15** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: By instructor permission. Participation as archaeological or cultural anthropological intern in public or private sectors; requires special arrangement with faculty advisor.
- 599 Archaeological Field School V 2-8** Course Prerequisite: By instructor permission. Training in methods of archaeological data recovery and analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- BIOL**
- 500 Seminar 1** May be repeated for credit.
- 501 Proposal Defense Seminar 2** Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.
- 504 Experimental Methods in Plant Physiology 3 (2-3)** Advanced techniques and instrumental methods applicable to research in plant physiology.
- 509 Plant Anatomy 4 (2-6)** Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.
- 512 Molecular Mechanisms of Plant Development 3** Physiology of growth; metabolism during development and reproduction.
- 513 Plant Metabolism 3** Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.
- 514 Fish Genetics 2** Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.
- 517 Stress Physiology of Plants 3** Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.
- 519 Introduction to Population Genetics 3** Survey of basic population and quantitative genetics.
- 520 Conservation Genetics 2** Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.
- 521 Quantitative Genetics 3** Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.
- 531 Principles of Systematic Biology 3** Systematic theory; history and current views; approaches to phylogenetic analysis and classification.

- 533 Modern Methods in Phylogenetics 4** (2-6) Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.
- 537 Plant Cell Biology 3** Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.
- 540 Stable Isotope Theory and Methods 3** (2-3) Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 548 Evolutionary Ecology of Populations 3** Evolutionary dynamics of natural populations and the co-evolution of species.
- 556 Biochemical Adaptation 3** Relationships between enzyme/macromolecule adaptation and animal performance.
- 559 Hormones, Brain and Behavior 3** Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.
- 560 Plant Ecophysiology 3** Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.
- 561 Environmental Physiology 3** Individual and evolutionary adaptations to changing environments with emphasis on recent literature.
- 562 Community Ecology 3** Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.
- 563 Field Ecology 2** (0-6) Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.
- 564 Molecular Ecology and Phylogeography 3** Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.
- 565 Ecology and Evolution of Disease 3** Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.
- 566 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 567 Ecological Restoration 3** Introduction to major issues in restoration ecology; major ecological dimensions of restoration.
- 568 Conservation Ecology 3** Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.
- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4** (3-3) Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.
- 575 Systems Biology of Reproduction 3** Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.
- 576 Epigenetics and Systems Biology 3** Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing 2** Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching 2** Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I 1** May be repeated for credit. Literature and problems.

- 597 Teaching Practicum V 1-4** May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

E MIC

- 586 Special Projects in Electron Microscopy V 2 (0-6) to 3 (0-9)** May be repeated for credit. Practical training in one or more areas of electron microscopy; TEM, SEM, ultramicrotomy, specimen processing; confocal fluorescent microscopy.
- 587 Special Topics in Electron Microscopy 1** May be repeated for credit; cumulative maximum 4 hours.

Natural Resource Sciences

NATRS

- 519 Advanced Topics V 1-3** May be repeated for credit; cumulative maximum 6 hours.
- 535 Wildlife Ecology 4 (3-3)** The ecology of wildlife species and the contributing biological processes. Overnight field trip required.
- 550 Conservation Biology 3** Patterns of biological diversity, factors producing changes in diversity, values of diversity, management principles applied to small populations, protected areas, landscape linkages, biotic integrity, restoration, legal issues and funding sources. Credit not granted for both NATRS 450 and NATRS 550.

- 554 Restoration Ecology 3 (2-3)** Ecological principles used to restore biological communities; ecological processes and species on degraded landscapes. Credit not granted for both NATRS 454 and NATRS 554.
- 556 Foraging Ecology of Herbivores 2** Synthesis of foraging behavior concepts including nutritive quality of forages, digestive and metabolic constraints, and diet and habitat selection.
- 560 Watershed Management 3** Principles and practices of management of forest and rangelands for protection, maintenance, and improvement of water resource values. Field trip required. Recommended preparation: NATRS 204 or sufficient background in spreadsheets.
- 564 Landscape Ecology 3 (2-3)** Linkages between spatial patterns and processes in a variety of landscapes and the qualitative tools used in the investigation of these linkages. Credit not granted for both NATRS 464 and NATRS 564.
- 594 Environmental and Natural Resources Issues and Ethics 3** Ethical systems applied to natural resources; issues of professionalism and ethics in natural resource management. (Cross-listed course offered as NATRS 594, ENVR SCI 594).
- 595 Seminar in Natural Resource Sciences 1** May be repeated for credit. Literature review; preparation and presentation of reports in natural resource sciences.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Natural Resource Sciences

SOILS

- 501 Seminar 1** May be repeated for credit. Presentation of research information.
- 502 Advanced Topics in Soils V 1-3** May be repeated for credit; cumulative maximum 6 hours. Interpretation, presentation, and discussion of current research on soils, uses, and management.
- 503 Advanced Soil Analysis V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Soil research techniques; application of modern instrumentation to soil analysis.
- 505 Teaching Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised experience in classroom teaching; classroom preparation for lectures, discussions, laboratories; preparation and grading of exams.

- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 513 Environmental Soil Physics 3 (2-3)** Physical properties of soils and their relationships to moisture, aeration, and temperature; plant-soil-atmospheric relationships; solute transport and soil salinity. Recommended preparation: SOIL SCI 201 and general physics.
- 514 Environmental Biophysics 2** Physical environment of living organisms (temperature, humidity, radiation, wind); heat and mass exchange and balance in plant and animal systems. Recommended preparation: Introductory biology, physics, and calculus.
- 515 Environmental Biophysics Laboratory 1 (0-3)** Course Prerequisite: Soil Sci 514 or concurrent enrollment. Experimental methods and procedures in environmental measurements; temperature, wind, radiation, and humidity measurements in biological environments.
- 521 Physical Chemistry of Soils 3** Chemical equilibrium and kinetics of soil solution speciation, mineral precipitation and dissolution, adsorption and partitioning reactions, and ion exchange. Soil constituents; soil solutions: mineral equilibria; absorption reactions; acid/base reactions; oxidation-reduction; soil contaminants.
- 531 Soil Microbiology 3 (2-3)** Biology and significance of organisms inhabiting soil and their role in nutrient cycling, ecosystem function, agriculture, and bioremediation.
- 533 Advanced Vadose Processes 2** Methods and models for water, heat, vapor and solute transport in the vadose zone; transfer functions to describe solute transport; non-linear parameter estimation; fate and transport of water, heat, and solutes in the vadose zone; hydrological and geochemical processes in unsaturated subsurface materials. Recommended preparation: upper division or graduate course in soil physics or chemistry.
- 541 Soil-Plant-Microbial Interactions 3** Soil-plant-microbial relationships to plant nutrition, plant health, and environmental cleanup; rhizosphere chemistry and microbial ecology. Required preparation must include two upper-division courses in biology, microbiology or soils.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 547 Soil Fertility Management 3** Philosophy of fertilizer recommendations based on soil and plant tissue testing; principles of fertilizer manufacture, placement and use. Required preparation must include introductory soils and upper-division soil fertility courses.
- 568 ArcGIS and Geospatial Analysis 4 (2-6)** Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 574 Remote Sensing and Geospatial Analysis 3 (1-4)** Digital image processing theory and geographic information systems applied to landscape analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Natural Resource Sciences**
- STAT**
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – Accounting

Degree offered: Doctor of Philosophy (Accounting)

Faculty working with graduate students: 12

Graduate students: 9

Graduate students receiving assistantships or scholarships: 100%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Research Tool Requirements include 12 hours or ANOVA, Regression/Econometrics, Psychometric Theory and Multivariate Statistics. See below for a full list of available courses. 1 credit professional development seminar. 24 credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The goal of the doctoral program in accounting is to provide rigorous instruction in behavioral accounting theory, empirical methods, and the application of quantitative tools to accounting research.

Training and Professional Development Opportunities

Students are introduced to contemporary accounting research literature in the department's doctoral seminars and also take graduate course work outside the department to support their research interests (e.g., in statistics, psychology, finance). In the accounting research workshops, doctoral students are exposed to faculty members' and visiting scholars' research. Faculty members work closely with students and assist them in developing and publishing research projects.

Post-Graduate Employment Opportunities

Upon completion, graduates will have a comprehensive background in the theories, research paradigms, tools, and methods of behavioral accounting research, and will be prepared to enter careers at the research university level.

Post-Graduate Career Placements

Oklahoma State University, University of Missouri at Kansas City, Montana State University, Bozeman, Loyola Marymount, Kent State University, California State University-Sacramento, East Carolina University, Bowling Green State University

ACCTG

- 530 Accounting Theory 3** Course Prerequisite: Admission to the Master of Accounting program. Recent developments with respect to the determination of income and the valuation of assets.
- 532 Contemporary Accounting Cases and Problems 3** Course Prerequisite: Admission to the Master of Accounting program. Accounting theory applied to external financial reporting practices.
- 533 Accounting, Performance Measurement and Controls 3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Managerial evaluation of budgeting, cost accounting, and financial analysis techniques; their utilization in control of operations.
- 535 Advanced Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Federal income tax impact on corporations, S corporations, partnerships, estates, trusts and their beneficial owners.
- 537 Professional Research 3** Course Prerequisite: Admission to the Master of Accounting program. Methodology used by accounting professionals to research applied problems in taxation, accounting, and auditing; communicate results.
- 538 Seminar in Cost/Managerial Accounting 3** Course Prerequisite: Admission to the Master of Accounting program. Cost concepts, cost and managerial accounting systems; current issues and research in cost and managerial accounting.
- 539 Seminar in Public Accounting and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Public accounting and auditing to present; current issues including statistical sampling and computers.
- 540 Corporate Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Application of federal tax provisions and rules pertaining to corporations, including S corporations; tax planning and consequences of corporate decisions.
- 541 Flow Through Entities 3** Course Prerequisite: Admission to the Master of Accounting program. Tax law and preparation requirements for entities in which tax elements pass thorough to the owner's individual income tax return.
- 542 Gifts, Estates and Trusts 3** Course Prerequisite: Admission to the Master of Accounting program. Estate and gift tax law.
- 543 Special Topics in Accounting 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the Master of Accounting program. Critical topics in accounting including new developments.
- 544 Advanced Accounting Systems and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Advanced topics in accounting systems, auditing and controls.

- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

B A

- 501 Foundations in Marketing V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.

- 520 Resources, Stakeholders and Competitive Advantage 3** Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

MGTOP

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.

- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- MKTG**
- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.

- 561 New Product Marketing** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing** 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- PSYCH**
- 502 Research Design** V 1-3 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations** 3 Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology** V 1-3 May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology** 1 May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology** V 1-3 May be repeated for credit.
- 510 Introduction to Online Instruction** 1 Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design** 3 Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design** 3 Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design** 3 May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics** 3 Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data** 3 Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software** 3 Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy** 3 Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues** 3 Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology** 3 Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.

- 534 Clinical Psychopharmacology** 3 Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis** 3 Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment** 3 Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment** 3 Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.
- 542 Child and Adolescent Psychopathology** 3 Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy** 3 Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions** 3 Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum** 3 (0-9) May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum** V 1-3 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship** V 1-3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology** 3 Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology** 3 Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology** 3 Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior** 3 Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning** 3 Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior** 3 Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology** V 2-16 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

STAT

508 Environmental Spatial Statistics 3 Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.

510 Topics in Probability and Statistics 3 May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.

512 Analysis of Variance of Designed Experiments 3 (2-2) Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.

516 Time Series 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.

519 Applied Multivariate Analysis 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.

520 Statistical Analysis of Qualitative Data 3 Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.

522 Biostatistics and Statistical Epidemiology 3 Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.

523 Statistical Methods for Engineers and Scientists 3 Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.

530 Applied Linear Models 3 (2-2) The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.

533 Theory of Linear Models 3 Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.

535 Regression Analysis 3 Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.

536 Statistical Computing 3 (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.

544 Applied Stochastic Processes 3 Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.

548 Statistical Theory I 3 Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.

549 Statistical Theory II 3 Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.

556 Introduction to Statistical Theory 3 Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.

565 Analyzing Microarray and Other Genomic Data 3 Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.

572 Quality Control 3 Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.

573 Reliability 3 Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.

590 Statistical Consulting Practicum V 1-2 May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – Finance

Degree offered: Doctor of Philosophy

Faculty working with graduate students: 9

Graduate students: 11

Graduate students receiving assistantships or scholarships: 100%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Requirements

Research Tool Requirements include classes in micro economics, macroeconomics, and advanced econometrics. See below for a full list of available courses. 1 credit professional development seminar. 24 credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The doctorate in business administration with an emphasis in finance at Washington State University is designed to prepare graduates for careers in research and teaching. The primary goal of the finance doctoral program is to train academics for placements at AACSB-accredited universities throughout the United States and abroad. The program encompasses a variety of formal and informal interactions and projects with faculty and others, as well as course work, comprehensive exams, teaching experience and dissertation research. It enables students to develop substantial competencies in the theory, practice, and research methodology essential to the advancement of finance knowledge, while accommodating individual backgrounds, expe-

riences, and objectives. Course work covers topics associated with the scholarly pursuit of finance as well as topics from supporting fields of inquiry such as economics, accounting, and psychology. Extensive coverage of research methods and statistics associated with finance research is a large component of the program. In addition to specific coursework, the finance doctoral program also provides an environment in which students can develop research competencies in close association with the finance faculty and other graduate students.

Post-Graduate Career Placements

Gonzaga University, Curtin Tech (Australia), Eastern Washington University, Eastern Montana College, Marist College (New York), University Mexico, Marquette University, Washington State University, Loyola Maramount, Drake University, Western Illinois University, Concordia University (Montreal), Nakai University (China), Brock University (Ontario), University of St. Thomas, University of Southern Mississippi, Illinois State University, University of Wyoming, University of Toledo, Central Michigan University, Oregon State University

Business Administration

B A

501 Foundations in Marketing V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.

502 Foundations in Operations Management V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.

503 Foundations in Business Law V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.

504 Foundations in Finance V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.

514 Business Analytics: Transforming Data into Decisions 3
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.

- 520 Resources, Stakeholders and Competitive Advantage 3** Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

FIN

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management 3** Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering 3** Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.

- 581 International Finance 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 595 Advanced Topics in Resource and Production Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- MATH**
- 500 Proseminar 1** May be repeated for credit; cumulative maximum 2 hours.
- 501 Real Analysis 3** Metric spaces, convergence, continuous functions, infinite series, differentiation and integration of functions of one and several variables. Required preparation must include advanced calculus or real analysis.
- 502 Introduction to Functional Analysis 3** Course Prerequisite: MATH 501. Normed linear spaces, Banach spaces, introduction to Hilbert space, linear operators. Required preparation: Advanced linear algebra.
- 503 Complex Analysis 3** Course Prerequisite: MATH 501. Analytic functions, complex integration, Taylor and Laurent series, conformal mapping, Riemann surfaces and analytic continuation.
- 504 Measure and Integration 3** Course Prerequisite: MATH 501. Lebesgue measure, Lebesgue integration, differentiation, L spaces, general measure and integration, Radon-Nikodym Theorem, outer measure and product measures.
- 505 Abstract Algebra 3** Groups, rings, fields, and homological algebra. Required preparation must include abstract algebra.
- 507 Advanced Theory of Numbers 3** May be repeated for credit; cumulative maximum 6 hours. Analytic and algebraic number theory.
- 508 Topics in Applied Analysis 3** Course Prerequisite: MATH 502. Advanced treatment of applications using techniques from fundamental analysis, convexity, analytic function theory, asymptotics, and differential equations.
- 511 Advanced Linear Algebra 3** Vector spaces, inner products, unitary equivalence, similarity, Jordan forms, normality, spectral theory, singular value decomposition, norms and inequalities. Required preparation must include advanced linear algebra.
- 512 Ordinary Differential Equations 3** Existence of solutions; linear systems; qualitative behavior, especially stability; periodic solutions. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 516 Simulation Methods 3** Model formulation and simulation in business, industry, and government; simulation languages; analysis of simulation output; applications. Credit not granted for both MATH 416 and MATH 516. Required preparation must include probability and statistics and programming experience.
- 525 General Topology 3** Sets, metric spaces, topological spaces; continuous mappings, compactness, connectedness, local properties, function spaces, and fundamental groups. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 531 Intersections of Culture and Mathematics 3** Gender/race/ethnicity differences; social consequences; cultural influences on development and learning of mathematics; role of women, people of color in mathematics. Credit not granted for both MATH 431 and MATH 531.
- 532 Mathematics for College and Secondary Teachers 3** Course Prerequisite: By instructor permission. Pre-algebra, algebra functions and geometry examined from an advanced perspective, for secondary and lower level college teachers. Credit not granted for both MATH 432 and MATH 532.

- 533 Teaching College Mathematics 1** May be repeated for credit; cumulative maximum 3 hours. Course Prerequisite: Graduate standing in Mathematics. Theory and practice of mathematics instruction at the collegiate level.
- 534 Theories of Learning in Mathematics 3** Math learning theories, including behaviorism, information processing, constructivism, situated cognition, communities of practice; influence on teaching and learning mathematics.
- 535 Research Paradigms in Mathematics Education 3** Course Prerequisite: MATH 534. Current research paradigms in math education research; critique research designs used in current mathematics education research article; design and carry out a research project.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 540 Applied Mathematics I 3** Partial differential equations; Fourier series and integrals; Bessel functions; calculus of variations; vector calculus; applications. Credit not granted for both MATH 440 and MATH 540. Required preparation must include differential equations.
- 541 Applied Mathematics II 3** Complex variable theory including analytic functions, infinite series, residues, and conformal mapping; Laplace transforms; applications. Credit not granted for both MATH 441 and MATH 541. Required preparation must include differential equations.
- 543 Approximation Theory 3** Univariate polynomial and rational approximation techniques; approximation using splines and wavelets; selected topics in multivariate approximation; algorithms for approximation. Required preparation must include numerical analysis.
- 544 Advanced Matrix Computations 3** Advanced topics in the solution of linear systems and eigenvalue problems, including parallel matrix computations. (Cross-listed course offered as MATH 544, CPT S 531). Required preparation must include numerical analysis. Required preparation must include numerical analysis.
- 545 Numerical Analysis of Evolution Equations 3** Discretization and numerical solution of partial differential equations of evolution; stability, consistency, and convergence; shocks; conservation of forms. Required preparation must include numerical analysis.
- 546 Numerical Analysis of Elliptic PDEs 3** Methods of discretizing elliptic partial differential equations and solving the resulting systems of equations; error analysis. Required preparation must include numerical analysis.
- 548 Numerical Analysis 3** Fundamentals of numerical computation; finding zeroes of functions, approximation and interpolation; numerical integration (quadrature); numerical solution of ordinary differential equations. (Cross-listed course offered as MATH 448, CPT S 430, CPT S 530). Required preparation must include differential equations and a programming course.
- 553 Graph Theory 3** Graphs and their applications, directed graphs, trees, networks, Eulerian and Hamiltonian paths, matrix representations, construction of algorithms. (Cross-listed course offered as MATH 453, CPT S 453). Required preparation must include linear algebra. Required preparation must include linear algebra.
- 555 Topics in Combinatorics 3** May be repeated for credit; cumulative maximum 6 hours. Combinatorics, generating functions, recurrence relations, inclusion-exclusion, coding theory; experimental design, graph theory.
- 560 Partial Differential Equations I 3** Partial differential equations and other functional equations: general theory, methods of solution, applications. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 561 Partial Differential Equations II 3** Course Prerequisite: MATH 560. Continuation of MATH 560.
- 563 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 564 Nonlinear Optimization I 3** Theory and algorithms for unconstrained nonlinear optimization problems, including line search, trust region, conjugate gradient, Newton and quasi-Newton methods. Required preparation must include advanced multivariate calculus, and a programming language. Recommended preparation: MATH 464, 544.
- 565 Nonlinear Optimization II 3** Course Prerequisite: MATH 564. Theory and algorithms for constrained linear and nonlinear optimization including interior point, quadratic programming, penalty, barrier and augmented Lagrangian methods.
- 566 Optimization in Networks 3** Formulation and solution of network optimization problems including shortest path, maximal flow, minimum cost flow, assignment, covering, postman, and salesman. Credit not granted for both MATH 466 and MATH 566. Required preparation must include linear programming.
- 567 Integer and Combinatorial Optimization 3** Theory and applications of integer and combinatorial optimization including enumerative, cutting plane, basis reduction, relaxation and matching methods. Required preparation must include linear optimization.
- 568 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 569 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 570 Mathematical Foundations of Continuum Mechanics I 3** The basic mathematical theory of continuum mechanics and its relation to perturbation techniques and stability methods. Required preparation must include differential equations and advanced calculus or real analysis.

- 571 Mathematical Foundations of Continuum Mechanics II 3**
Course Prerequisite: MATH 570. Continuation of MATH 570.
- 574 Topics in Optimization 3** May be repeated for credit; cumulative maximum 12 hours. Advanced topics in the theory and computing methodology in optimization with emphasis on real-life algorithmic implementations. Required preparation must include advanced multivariable calculus and a programming language.
- 575 Asset Pricing in Financial Engineering 3** Mathematical methods for various models on valuation of stocks and options, with rigorous mathematical analysis on pricing and hedging techniques. Recommended preparation: Advanced calculus and some knowledge on differential equations.
- 576 Quantitative Risk Management 3** Fundamental concepts in modern risk theory and mathematical methods in quantitative risk management; coherent risk measures, volatility modeling, multivariate dependence analysis using copulas, risk aggregation and allocation, and extreme value theory.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Topics in Mathematics V 1-3** May be repeated for credit. Topics in mathematics.
- 583 Topics in Applied Mathematics V 1-3** May be repeated for credit. Topics in applied mathematics.
- 586 Mathematical Modeling in the Natural Science 3** Development of mathematical models for solutions of problems in the physical and life sciences. Credit not granted for both MATH 486 and MATH 586. Required preparation must include differential equations.
- 590 Topics in Mathematics Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Topics in mathematics education.
- 597 Mathematics Instruction Seminar 1** May be repeated for credit; cumulative maximum 5 hours. Introduction to the teaching of university mathematics.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18**
May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- MGTOP**
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.

- 590 Strategy Formulation and Organizational Design** 3 Course
Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions** 3 Course
Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity** 3 Course
Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

MKTG

- 505 Survey of Marketing** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing** 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- STAT**
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.

- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – Hospitality and Tourism

Degree offered: Doctor of Philosophy

Faculty working with graduate students: 5

Graduate students: 3

Graduate students receiving assistantships or scholarships: 100%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Research Tool Requirements include 12 hours or ANOVA, Regression/Econometrics, Psychometric Theory and Multivariate Statistics. See below for a full list of available courses. 1 credit professional development seminar. 24 credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman,

Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The PhD in business administration with an emphasis in hospitality and tourism management is designed to prepare graduates for careers in research and teaching at institutions throughout the United States and abroad. Applicants with strong hospitality and tourism business background are preferred. Incoming students are expected to have both good written and oral communication skills, as well as good analytical skills to facilitate the mastery of research methods and statistics. The course of study requires a battery of hospitality and tourism business management courses as well as a group of research design and statistics courses. Students are also expected to take courses from supporting fields of inquiry such as psychology, sociology, management, marketing, etc. The degree normally takes four years to complete and involves taking courses, developing an area (2nd-year) paper, passing a comprehensive exam, and the completion of a doctoral dissertation.

Training and Professional Development Opportunities

Coursework in the area of specialization is intended to provide necessary skills and knowledge to conduct research in a chosen field. Courses must be related to an area of study selected by the student and approved by the doctoral student's committee. Supporting doctoral level coursework may be selected from areas such as (but not limited to) research seminars in anthropology, psychology, sociology, economics, management, international business, information systems, marketing, communication, etc. Additional coursework in Hospitality and Tourism Business Management may also be taken, with approval from the doctoral student's committee. Annual Review and Comprehensive Exams. The goal of the annual reviews and comprehensive exams is to assess the candidate's overall mastery of the core body of knowledge in the field and the degree of preparation to undertake research independently or with minimal supervision. The Ph.D. Program director and committee along with appropriate advisors will annually review the progress of the students in terms of publications and research effort. This may entail a qualifying exam each year depending on the program committee's review of the candidate. The Comprehensive Exam (scheduled sometime during the third year in the program) will test the candidate's knowledge in five areas: 1. Hospitality and tourism major field requirements: Hospitality and Tourism core knowledge includes a thorough understanding of hospitality and tourism, and behavioral research methods. 2. Business electives: The student should be able to demonstrate an appropriate level of understanding of theories and research methods aligned with those business disciplines chosen for further study, including finance, information systems, international business, management & operations, and/or marketing. 3. Hospitality and tourism research: The student should be able to demonstrate a thorough understanding of hospitality and tourism research, including explanatory theories and past research findings. In addition, the candidate is expected to demonstrate command over the relevant literature from his/her supporting field. 4. Hospitality and tourism research methods and statistics: The student should also have an extensive knowledge of statistics and the research methodologies that can be employed to study hospitality and tourism phenomena from a behavioral standpoint. 5. Oral and written communication skills: Given the program's focus on producing hospitality and tourism

scholars who can be successful at other accredited, peer or better research universities, the student is also expected to show a high level of written and oral communication skills exhibited in the written and oral comprehensive exams, research presentations at national/international conferences, and publications in hospitality & tourism journals.

Business Administration

B A

- 501 Foundations in Marketing V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3**
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3**
Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.

- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

ECONS

- 500 Macroeconomic Theory I** 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I** 3 Microeconomic theory, multivariate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II** 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II** 3 Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).

- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making 3** Managerial economics with specific applications to agricultural issues.
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I 3** Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II 3** Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V 1-2** May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- FIN**
- 500 Macroeconomic Theory I** 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I** 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II** 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II** 3 Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics** 3 Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists** 3 Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I** 3 Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II** 3 Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management** 3 Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering** 3 Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).

- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 595 Advanced Topics in Resource and Production Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Hospitality Business Management

HBM

- 535 International Tourism Strategy and Planning 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Tourism components; social, economic, and cultural effects on societies; the management of tourism businesses.
- 581 Services Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and management of service systems in hospitality operations; control of customer interaction, personnel activities and inventory.
- 582 Hospitality Operations Analysis 3** Yield/revenue management and managerial accounting concepts within the hospitality industry.

- 591 Service Management Seminar 3** Course Prerequisite: Admission to PhD programs in business. Survey of selected concepts, frameworks, theory, issues and empirical research in service management.
- 592 Current Issues in Travel and Tourism 3** Course Prerequisite: Admission to PhD programs in business. Current issues, practices, principles and theory, research and methodologies that govern travel and tourism behavior.
- 597 Special Topics 3** Course Prerequisite: Admission to PhD programs in business. Strategic business policy, concepts, and practices in hospitality management.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Hospitality Business Management

I BUS

- 580 International Business Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Decision making in the international environment; political, cultural, and economic risk management.
- 582 International Marketing Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international marketing, marketing decision making in international environments, problems of adapting marketing programs to international markets.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

Hospitality Business Management

MGTOP

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.

- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T₂ and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Management Information Systems**
- MIS**
- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.

- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

PSYCH

- 502 Research Design V** 1-3 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V** 1-3 May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology V** 1-3 May be repeated for credit.
- 510 Introduction to Online Instruction 1** Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design 3** May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics 3** Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data 3** Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software 3** Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy 3** Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues 3** Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology 3** Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology 3** Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis 3** Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment 3** Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment 3** Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.

- 542 Child and Adolescent Psychopathology 3** Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy 3** Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions 3** Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum 3 (0-9)** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum V 1-3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship V 1-3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology 3** Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology 3** Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology 3** Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior 3** Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning 3** Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior 3** Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology V 2-16** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Management Information Systems**
- SOC**
- 510 Development of Social Theory 3** Examination of the foundations of social theory.
- 517 Seminar in Contemporary Sociological Theory 3** Recent developments in sociological theory, analysis, application and appraisal of specific theoretical systems.
- 519 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 520 Research Methods in Sociology 3** Methodology of social research at the professional level.
- 521 Regression Models 3** Simple and multiple regression, structural equation models, nonlinear applications, applications for discrete dependent variables.

- 522 Advanced Sociological Methodology 3** May be repeated for credit; cumulative maximum 12 hours. Scaling theory, sampling theory, experimental design, measurement of association, multivariate analysis, current methods and techniques. Recommended preparation: SOC 521.
- 523 Qualitative Methods Practicum 3** Introduction to qualitative research methods as used in social sciences; epistemological underpinnings and empirical techniques. Recommended preparation: SOC 520.
- 525 Practicum in Survey Research 3** Practical experience in design and implementation of telephone and mail surveys; participation in all aspects of conducting a survey. Recommended preparation: SOC 520.
- 526 Experimental Methods 3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SOC 521. Experimental methods including design and analysis, settings, manipulations, measures and human subjects considerations.
- 530 Demography 3** Population studies; causes, effects, and measurement of changes in fertility, mortality, and migration; population estimation and projection.
- 531 Human Ecology 3** Ecosystem context of human life; change viewed ecologically; sociological use and misuse of ecological concepts; issues in theory and research.
- 532 Environmental Sociology 3** Societal-environmental interactions; impacts of human societies on the physical environment; environmental impacts on human behavior and social organization.
- 535 Technology and Society 3** Analysis of sociotechnical systems; effects of technology on society; the social shaping of technologies and their environmental impacts.
- 536 Special Topics in Environmental Sociology V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 9 hours. Special topics in environmental sociology.
- 542 Social Stratification: Class, Race and Gender Inequalities 3** Theoretical and empirical research in both classic stratification literature and recent scholarship on class, race/ethnicity and gender.
- 545 Sociology of Community 3** Community stability and change: interaction processes; decision making; societal linkages; effects on well-being.
- 553 Social Organization and the Family 3** The family as a social institution; principles of social organization applied to family relationships; macro-level analyses of family structure.
- 554 Social Psychology of the Family 3** The family as an interacting group; social psychological theories and research applied to family relationships; effects of families on individuals.
- 556 Sociology of Aging and the Life Course 3** Theory and research on the changes individuals undergo over the life course; influences of history, social structure, agency and social relations on lives.
- 574 Labor Market Inequality 3** Overview of research on the causes and consequences of inequality in U.S. work organizations.
- 580 Sociology of Race Relations 3** Analysis of race/ethnic relations; historical and current theoretical explanations of race/ethnic relations.
- 582 Social Movements 3** Theories and methods in social movement studies.
- 590 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 591 The Sociology Profession 1** May be repeated for credit; cumulative maximum 2 hours. Requirements, operations, problems, and possibilities of the sociology profession.
- 592 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 593 Special Topics in Sociology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Special topics in sociology.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Management Information Systems**
- STAT**
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – Information Systems

Degree offered: Doctor of Philosophy

Faculty working with graduate students: 6

Graduate students: 12

Graduate students receiving assistantships or scholarships: 100%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Students must take a minimum of 12 credits of statistics, which should cover topics such as design of experiments, ANOVA, multivariate analysis, regression, psychometric theory, and SEM. The Psych 511-514 series is the most recommended. 1 credit professional development seminar. 24 credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The Ph.D. in IS at WSU focuses on behavioral issues in MIS, enabling students to develop critical skills in both research and teaching, and therefore compete for, and succeed in, the best academic jobs in the country.

Post-Graduate Career Placements

University of Delaware, University of San Francisco Towson University, University of Nevada, Las Vegas, University of Virginia, University of Montana, University of North Texas

Faculty

Paul Clay, Mauricio Featherman, Kshiti Joshi, Saonee Sarker, Suprateek Sarker and Joe Valacich.

Business Administration

B A

- 501 Foundations in Marketing V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.

504 Foundations in Finance V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.

514 Business Analytics: Transforming Data into Decisions 3
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.

520 Resources, Stakeholders and Competitive Advantage 3
Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.

579 MBA Capstone 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).

596 Doctoral Topics V 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.

598 Research and Professional Development 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

COM

500 Communication Colloquium 1 May be repeated for credit; cumulative maximum 8 hours. Written and oral presentation of research topics in Communication; college colloquium.

- 501 Theory Building in Communication** 3 Relationship of research to theory development; evaluation of current theory and research; planning and executing research within specified theoretical frameworks.
- 502 Consumer Analysis and Brand Development** 3 Consumer analysis and brand development; skills to make strategic communication campaigns successful.
- 504 Instructional Practicum** 1 May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: By interview only.
- 506 Persuasion and Social Influence** 3 Theories, concepts strategies and processes of persuasion and social influence.
- 507 Communication Ethics Seminar** 3 Topics in communication ethics.
- 509 Quantitative Research** 3 Introduction to quantitative research in communication; hypothesis development, testing; basic statistics, interpretation; field surveys, laboratory and field experiments, content analysis.
- 514 Health Communication Theories and Campaigns** 3 Health communication theories with a focus on campaign construction and evaluation.
- 516 Health Communication and Society** 3 3 Reviews, critiques and applications of research regarding the impact of social and cultural environments on health communication.
- 517 Health Communication and Social Development** 3 Explores and tests role of mediated communication in the causes of and solutions for health problems, particularly among young people.
- 521 Foundational Perspectives in Intercultural Communication** 3 Overview of three current foundational research perspectives in intercultural communication; functionalist (post-positivist), interpretive and critical.
- 522 Theoretical Perspectives on Intercultural Communication** 3 Advanced readings in intercultural communication theory and methods; paradigms in current theorizing.
- 524 Intercultural/International Communication and Social Change** 3 Application of communication theory, research and technologies aimed at fostering social change in intercultural and international contexts.
- 526 Current Topics in Intercultural Communication** 3 Topics in current intercultural communication research.
- 535 Organizational Communication Theory** 3 May be repeated for credit; cumulative maximum 6 hours. Traditional and emerging theories in organizational communication.
- 537 Organization and Society** 3 Historical foundations, theoretical developments, contemporary issues and practical implications of communicative processes of organizations within society.
- 540 Risk Communication** 3 Research and practice in risk communication.
- 550 Media Processes and Effects: Theory and Practice** 3 Physiological, psychological and social effects of media messages and technologies upon individuals and societies.
- 552 Current Issues in Media Processes and Effects** 3 Current issues in media processes and effects.
- 561 Multimedia Content Creation** 3 Exploration and application of strategies to communicate ideas clearly, concisely, and effectively through multimedia content.
- 562 Crisis Communication in Global Contexts** 3 Prepare, plan, and execute crisis communication and management to protect the continuity of an organization's image and mission.
- 563 Ethics for Professionals** 3 The understanding, discussion, and application of key theories of individual and institutional ethics; the articulation and defense of ethical reasoning.
- 564 Research Methods for Professionals** 3 Understanding the role of research in media and related organizations and its application to organizational decision making through quantitative and qualitative research methods including research design, questionnaire construction, sampling, data collection techniques, and variable measurement.
- 570 Communication Theory** 3 Relevant theories and research from mass and interpersonal communication.
- 571 Theoretical Perspectives on Media and Society** 3 Theories explaining the social and cultural environments of communication processes emphasizing in mass communication.
- 572 Mass Media, Social Control, and Social Change** 3 Study of the forces that influence the media's role as an agent of social control or social change.
- 573 Media and Public Discourse** 3 Historical and contemporary concepts, questions and dynamics constituting the role of media and discourse among various publics.
- 580 Topics in Communication** 3 May be repeated for credit; cumulative maximum 12 hours. Contemporary, specialized, or technical topics in communication.
- 591 Qualitative Research Methods** 3 Historical, textual, and legal methodologies for theory-based evaluative and discourse studies in communication.
- 599 Seminar in Communication** 3 May be repeated for credit; cumulative maximum 6 hours. Special topics in rhetoric, communication, and public address.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: By interview only. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MIS

- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.

- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.

- 565 Seminar in Marketing 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

PSYCH

- 502 Research Design V 1-3** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V 1-3** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology V 1-3** May be repeated for credit.
- 510 Introduction to Online Instruction 1** Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design 3** May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics 3** Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data 3** Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software 3** Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy 3** Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues 3** Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology 3** Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology 3** Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.

- 535 Personality Assessment and Diagnosis** 3 Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment** 3 Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment** 3 Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.
- 542 Child and Adolescent Psychopathology** 3 Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy** 3 Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions** 3 Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum** 3 (0-9) May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum** V 1-3 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship** V 1-3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology** 3 Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology** 3 Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology** 3 Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior** 3 Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning** 3 Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior** 3 Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology** V 2-16 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

SOC

510 Development of Social Theory 3 Examination of the foundations of social theory.

517 Seminar in Contemporary Sociological Theory 3 Recent developments in sociological theory, analysis, application and appraisal of specific theoretical systems.

519 International Development and Human Resources 3 History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).

520 Research Methods in Sociology 3 Methodology of social research at the professional level.

521 Regression Models 3 Simple and multiple regression, structural equation models, nonlinear applications, applications for discrete dependent variables.

522 Advanced Sociological Methodology 3 May be repeated for credit; cumulative maximum 12 hours. Scaling theory, sampling theory, experimental design, measurement of association, multivariate analysis, current methods and techniques. Recommended preparation: SOC 521.

523 Qualitative Methods Practicum 3 Introduction to qualitative research methods as used in social sciences; epistemological underpinnings and empirical techniques. Recommended preparation: SOC 520.

525 Practicum in Survey Research 3 Practical experience in design and implementation of telephone and mail surveys; participation in all aspects of conducting a survey. Recommended preparation: SOC 520.

526 Experimental Methods 3 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SOC 521. Experimental methods including design and analysis, settings, manipulations, measures and human subjects considerations.

530 Demography 3 Population studies; causes, effects, and measurement of changes in fertility, mortality, and migration; population estimation and projection.

531 Human Ecology 3 Ecosystem context of human life; change viewed ecologically; sociological use and misuse of ecological concepts; issues in theory and research.

532 Environmental Sociology 3 Societal-environmental interactions; impacts of human societies on the physical environment; environmental impacts on human behavior and social organization.

535 Technology and Society 3 Analysis of sociotechnical systems; effects of technology on society; the social shaping of technologies and their environmental impacts.

536 Special Topics in Environmental Sociology V 1 (0-3) to 3 (0-9) May be repeated for credit; cumulative maximum 9 hours. Special topics in environmental sociology.

542 Social Stratification: Class, Race and Gender Inequalities 3 Theoretical and empirical research in both classic stratification literature and recent scholarship on class, race/ethnicity and gender.

545 Sociology of Community 3 Community stability and change: interaction processes; decision making; societal linkages; effects on well-being.

553 Social Organization and the Family 3 The family as a social institution; principles of social organization applied to family relationships; macro-level analyses of family structure.

554 Social Psychology of the Family 3 The family as an interacting group; social psychological theories and research applied to family relationships; effects of families on individuals.

556 Sociology of Aging and the Life Course 3 Theory and research on the changes individuals undergo over the life course; influences of history, social structure, agency and social relations on lives.

574 Labor Market Inequality 3 Overview of research on the causes and consequences of inequality in U.S. work organizations.

580 Sociology of Race Relations 3 Analysis of race/ethnic relations; historical and current theoretical explanations of race/ethnic relations.

582 Social Movements 3 Theories and methods in social movement studies.

590 Special Topics in Sociology 3 May be repeated for credit; cumulative maximum 9 hours.

591 The Sociology Profession 1 May be repeated for credit; cumulative maximum 2 hours. Requirements, operations, problems, and possibilities of the sociology profession.

592 Special Topics in Sociology 3 May be repeated for credit; cumulative maximum 9 hours.

593 Special Topics in Sociology V 1-3 May be repeated for credit; cumulative maximum 6 hours. Special topics in sociology.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – Management

Degree offered: Doctor of Philosophy (Business Administration)

Faculty working with graduate students: 9

Graduate students: 7

Graduate students receiving assistantships or scholarships: 100%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Research Tool Requirements include 12 hours of ANOVA, Regression/Econometrics, Psychometric Theory and Multivariate Statistics. See below for a full list of available courses. 1 credit professional development seminar. 24 total credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The PhD in Management requires an understanding of the content of management and the ability to conduct scientific research using tools of statistical analysis and research design. As such, the course of study requires a battery of management courses as well as a group of research design and statistics courses. The degree normally takes four years to complete and involves taking courses, developing an area (2nd-year) paper, passing a comprehensive exam, and the completion of a doctoral dissertation. Candidates who are able to defend their dissertation proposal before the fourth year are afforded a fifth year of

support (if desired).

Training and Professional Development Opportunities

Conference funding is generally available for students presenting a paper if the budget allows for it.

Post-Graduate Employment Opportunities

None.

Post-Graduate Career Placements

University of Wisconsin, Milwaukee , Boise State University , University of Idaho, National Sun Yat Sen, Taiwan, University of North Dakota, Wichita State University, University of Idaho, University of Alaska, Anchorage, Chinese University-Hong Kong, College of St. Benedict, Western Illinois University, University of Wisconsin, White Water, St. Ambrose University, Bryant College, Central Washington University, University of Mississippi, US Army War College, Carlisle, PA, Cleveland State University, Private Industry (Samsung), Chapman University, Los Angeles, Fort Hays State University, Kansas, University of North Texas, James Madison University

Business Administration

B A

501 Foundations in Marketing V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.

502 Foundations in Operations Management V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.

503 Foundations in Business Law V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.

504 Foundations in Finance V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.

514 Business Analytics: Transforming Data into Decisions 3
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.

- 520 Resources, Stakeholders and Competitive Advantage 3** Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

ECONS

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making 3** Managerial economics with specific applications to agricultural issues.
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.

- 526 Master's Microeconomic Analysis I** 3 Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II** 3 Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods** V 1-2 May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics** 3 Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy** 3 International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics** 3 Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making** 3 Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics** V 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar** 1 May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics** 3
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- MGTOP**
- 516 Time Series** 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis** 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.

- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- PSYCH**
- 502 Research Design V 1-3** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V 1-3** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.

- 508 Special Topics in Psychology V** 1-3 May be repeated for credit.
- 510 Introduction to Online Instruction** 1 Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design** 3 Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design** 3 Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design** 3 May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics** 3 Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data** 3 Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software** 3 Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy** 3 Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues** 3 Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology** 3 Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology** 3 Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis** 3 Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment** 3 Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment** 3 Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.
- 542 Child and Adolescent Psychopathology** 3 Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy** 3 Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions** 3 Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum** 3 (0-9) May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum V** 1-3 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum** 3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship V** 1-3 May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology** 3 Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology** 3 Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.

- 575 Foundations of Neuropsychology 3** Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology 3** Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior 3** Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning 3** Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior 3** Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology V 2-16** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- SOC**
- 510 Development of Social Theory 3** Examination of the foundations of social theory.
- 517 Seminar in Contemporary Sociological Theory 3** Recent developments in sociological theory, analysis, application and appraisal of specific theoretical systems.
- 519 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 520 Research Methods in Sociology 3** Methodology of social research at the professional level.
- 521 Regression Models 3** Simple and multiple regression, structural equation models, nonlinear applications, applications for discrete dependent variables.
- 522 Advanced Sociological Methodology 3** May be repeated for credit; cumulative maximum 12 hours. Scaling theory, sampling theory, experimental design, measurement of association, multivariate analysis, current methods and techniques. Recommended preparation: SOC 521.
- 523 Qualitative Methods Practicum 3** Introduction to qualitative research methods as used in social sciences; epistemological underpinnings and empirical techniques. Recommended preparation: SOC 520.
- 525 Practicum in Survey Research 3** Practical experience in design and implementation of telephone and mail surveys; participation in all aspects of conducting a survey. Recommended preparation: SOC 520.
- 526 Experimental Methods 3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SOC 521. Experimental methods including design and analysis, settings, manipulations, measures and human subjects considerations.
- 530 Demography 3** Population studies; causes, effects, and measurement of changes in fertility, mortality, and migration; population estimation and projection.
- 531 Human Ecology 3** Ecosystem context of human life; change viewed ecologically; sociological use and misuse of ecological concepts; issues in theory and research.
- 532 Environmental Sociology 3** Societal-environmental interactions; impacts of human societies on the physical environment; environmental impacts on human behavior and social organization.
- 535 Technology and Society 3** Analysis of sociotechnical systems; effects of technology on society; the social shaping of technologies and their environmental impacts.
- 536 Special Topics in Environmental Sociology V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 9 hours. Special topics in environmental sociology.
- 542 Social Stratification: Class, Race and Gender Inequalities 3** Theoretical and empirical research in both classic stratification literature and recent scholarship on class, race/ethnicity and gender.
- 545 Sociology of Community 3** Community stability and change: interaction processes; decision making; societal linkages; effects on well-being.
- 553 Social Organization and the Family 3** The family as a social institution; principles of social organization applied to family relationships; macro-level analyses of family structure.

- 554 Social Psychology of the Family 3** The family as an interacting group; social psychological theories and research applied to family relationships; effects of families on individuals.
- 556 Sociology of Aging and the Life Course 3** Theory and research on the changes individuals undergo over the life course; influences of history, social structure, agency and social relations on lives.
- 574 Labor Market Inequality 3** Overview of research on the causes and consequences of inequality in U.S. work organizations.
- 580 Sociology of Race Relations 3** Analysis of race/ethnic relations; historical and current theoretical explanations of race/ethnic relations.
- 582 Social Movements 3** Theories and methods in social movement studies.
- 590 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 591 The Sociology Profession 1** May be repeated for credit; cumulative maximum 2 hours. Requirements, operations, problems, and possibilities of the sociology profession.
- 592 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 593 Special Topics in Sociology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Special topics in sociology.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

STAT

- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.

- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – Marketing

Degree offered: Doctor of Philosophy

Faculty working with graduate students: 8

Graduate students: 11

Graduate students receiving assistantships or scholarships: 90%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Requirements: Research Tool Requirements include 12 hours or ANOVA, Regression/Econometrics, Psychometric Theory and Multivariate Statistics. See below for a full list of available courses. 1 credit professional development seminar. 24 credit requirement for Ph.D. research. An Area Research Paper is required in the second year and a written field examination is required in the third year.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The doctorate in business administration with an emphasis in marketing at Washington State University is designed to prepare graduates for careers in research and teaching. The primary goal of the marketing doctoral program is to train academics for placements at AACSB-accredited peer institutions (preferably with a doctoral program of their own) throughout the United States and abroad. Those with a completed master's degree in a business discipline can complete the doctorate in four years of full-time resident study. The program encompasses a variety of formal and informal interactions and projects with faculty and others, as well as course work, comprehensive exams, and dissertation research. It enables students to develop substantial competencies in the theory, practice, and research methodology essential to the advancement of marketing knowledge, while accommodating individual backgrounds, experiences, and objectives. Course work covers topics associated with the scholarly pursuit of marketing as well as topics from supporting fields of

inquiry such as psychology, sociology, and management. Extensive coverage of research methods and statistics associated with the social sciences also is a large component of the program. In addition to specific coursework, the marketing doctoral program also provides an environment in which students can develop research competencies in close association with the marketing faculty and other graduate students.

Business Administration

B A

- 501 Foundations in Marketing V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3**
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3**
Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).

- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

ECONS

- 500 Macroeconomic Theory I** 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I** 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II** 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).

- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making 3** Managerial economics with specific applications to agricultural issues.
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V 1-3** May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics 3** Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I 3** Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II 3** Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V 1-2** May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.
- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).

- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- MGTOP**
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.

- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

MKTG

- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.

- 577 Promotional Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

PSYCH

- 502 Research Design V 1-3** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V 1-3** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.

- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology V 1-3** May be repeated for credit.
- 510 Introduction to Online Instruction 1** Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design 3** May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics 3** Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data 3** Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software 3** Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy 3** Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues 3** Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology 3** Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology 3** Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis 3** Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment 3** Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment 3** Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.
- 542 Child and Adolescent Psychopathology 3** Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy 3** Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions 3** Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum 3 (0-9)** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum V 1-3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship V 1-3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.

- 574 Clinical and Experimental Biopsychology 3** Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology 3** Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology 3** Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior 3** Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning 3** Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior 3** Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology V 2-16** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- SOC**
- 510 Development of Social Theory 3** Examination of the foundations of social theory.
- 517 Seminar in Contemporary Sociological Theory 3** Recent developments in sociological theory, analysis, application and appraisal of specific theoretical systems.
- 519 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 520 Research Methods in Sociology 3** Methodology of social research at the professional level.
- 521 Regression Models 3** Simple and multiple regression, structural equation models, nonlinear applications, applications for discrete dependent variables.
- 522 Advanced Sociological Methodology 3** May be repeated for credit; cumulative maximum 12 hours. Scaling theory, sampling theory, experimental design, measurement of association, multivariate analysis, current methods and techniques. Recommended preparation: SOC 521.
- 523 Qualitative Methods Practicum 3** Introduction to qualitative research methods as used in social sciences; epistemological underpinnings and empirical techniques. Recommended preparation: SOC 520.
- 525 Practicum in Survey Research 3** Practical experience in design and implementation of telephone and mail surveys; participation in all aspects of conducting a survey. Recommended preparation: SOC 520.
- 526 Experimental Methods 3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SOC 521. Experimental methods including design and analysis, settings, manipulations, measures and human subjects considerations.
- 530 Demography 3** Population studies; causes, effects, and measurement of changes in fertility, mortality, and migration; population estimation and projection.
- 531 Human Ecology 3** Ecosystem context of human life; change viewed ecologically; sociological use and misuse of ecological concepts; issues in theory and research.
- 532 Environmental Sociology 3** Societal-environmental interactions; impacts of human societies on the physical environment; environmental impacts on human behavior and social organization.
- 535 Technology and Society 3** Analysis of sociotechnical systems; effects of technology on society; the social shaping of technologies and their environmental impacts.
- 536 Special Topics in Environmental Sociology V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 9 hours. Special topics in environmental sociology.
- 542 Social Stratification: Class, Race and Gender Inequalities 3** Theoretical and empirical research in both classic stratification literature and recent scholarship on class, race/ethnicity and gender.
- 545 Sociology of Community 3** Community stability and change: interaction processes; decision making; societal linkages; effects on well-being.

- 553 Social Organization and the Family 3** The family as a social institution; principles of social organization applied to family relationships; macro-level analyses of family structure.
- 554 Social Psychology of the Family 3** The family as an interacting group; social psychological theories and research applied to family relationships; effects of families on individuals.
- 556 Sociology of Aging and the Life Course 3** Theory and research on the changes individuals undergo over the life course; influences of history, social structure, agency and social relations on lives.
- 574 Labor Market Inequality 3** Overview of research on the causes and consequences of inequality in U.S. work organizations.
- 580 Sociology of Race Relations 3** Analysis of race/ethnic relations; historical and current theoretical explanations of race/ethnic relations.
- 582 Social Movements 3** Theories and methods in social movement studies.
- 590 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 591 The Sociology Profession 1** May be repeated for credit; cumulative maximum 2 hours. Requirements, operations, problems, and possibilities of the sociology profession.
- 592 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 593 Special Topics in Sociology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Special topics in sociology.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

STAT

- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.

- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Business Administration – MBA (Online)

Degree offered: Master of Business Administration

Faculty working with graduate students: 12

Graduate students: 45

Program offered: DDP, DDP

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall 1: August 8

Fall 2: October 3

Spring 1: December 22

Spring 2: February 19

Summer 1: April 25

Summer 2: June 13

Requirements

The MBA program consists of 12 courses. Nine core courses provide students with skill development in Strategic Leadership, Management of Innovation and in Functional Business Areas including Accounting, Finance, Services Management and Marketing. Three electives are offered at intervals for degree completion. The final project for this program is a unique comprehensive business plan.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

Washington State University's MBA online program exposes students to broad-ranging coursework that helps to hone entrepreneurial instincts and skills that can lead to significant commercial impact. The program is designed for students to learn how to successfully drive the execution and delivery of business initiatives as well as refine and improve upon existing opportunities. Washington State University produces MBA online graduates who are equipped with the tools and intellect to lead across geographic boundaries and negotiate complex business challenges.

Faculty

Sung Ahn, Jonathan Arthurs, Kenneth Butterfield, Yany Gregoire, Dogan Gursoy, Joseph Harris, Robert Jenefsky, Velle Kolde, Donna Paul, Ronald Pike, Suprateek Sarker and David Sprott.

ACCTG

- 530 Accounting Theory 3** Course Prerequisite: Admission to the Master of Accounting program. Recent developments with respect to the determination of income and the valuation of assets.
- 532 Contemporary Accounting Cases and Problems 3** Course Prerequisite: Admission to the Master of Accounting program. Accounting theory applied to external financial reporting practices.
- 533 Accounting, Performance Measurement and Controls 3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Managerial evaluation of budgeting, cost accounting, and financial analysis techniques; their utilization in control of operations.
- 535 Advanced Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Federal income tax impact on corporations, S corporations, partnerships, estates, trusts and their beneficial owners.
- 537 Professional Research 3** Course Prerequisite: Admission to the Master of Accounting program. Methodology used by accounting professionals to research applied problems in taxation, accounting, and auditing; communicate results.
- 538 Seminar in Cost/Managerial Accounting 3** Course Prerequisite: Admission to the Master of Accounting program. Cost concepts, cost and managerial accounting systems; current issues and research in cost and managerial accounting.
- 539 Seminar in Public Accounting and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Public accounting and auditing to present; current issues including statistical sampling and computers.
- 540 Corporate Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Application of federal tax provisions and rules pertaining to corporations, including S corporations; tax planning and consequences of corporate decisions.
- 541 Flow Through Entities 3** Course Prerequisite: Admission to the Master of Accounting program. Tax law and preparation requirements for entities in which tax elements passes thorough to the owner's individual income tax return.
- 542 Gifts, Estates and Trusts 3** Course Prerequisite: Admission to the Master of Accounting program. Estate and gift tax law.

- 543 Special Topics in Accounting 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the Master of Accounting program. Critical topics in accounting including new developments.
- 544 Advanced Accounting Systems and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Advanced topics in accounting systems, auditing and controls.
- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

B A

- 501 Foundations in Marketing V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.

- 504 Foundations in Finance V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3**
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3**
Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

ENTRP

- 501 Technology Entrepreneurship 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Basic business concepts and processes applied to technology commercialization and venture creation.

- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

Business Administration

FIN

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multivariate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.

- 511 Econometrics I** 3 Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II** 3 Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management** 3 Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering** 3 Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 595 Advanced Topics in Resource and Production Economics** V 1-6 May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics** V 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Hospitality Business Management**
- HBM**
- 535 International Tourism Strategy and Planning** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Tourism components; social, economic, and cultural effects on societies; the management of tourism businesses.
- 581 Services Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and management of service systems in hospitality operations; control of customer interaction, personnel activities and inventory.
- 582 Hospitality Operations Analysis** 3 Yield/revenue management and managerial accounting concepts within the hospitality industry.
- 591 Service Management Seminar** 3 Course Prerequisite: Admission to PhD programs in business. Survey of selected concepts, frameworks, theory, issues and empirical research in service management.
- 592 Current Issues in Travel and Tourism** 3 Course Prerequisite: Admission to PhD programs in business. Current issues, practices, principles and theory, research and methodologies that govern travel and tourism behavior.
- 597 Special Topics** 3 Course Prerequisite: Admission to PhD programs in business. Strategic business policy, concepts, and practices in hospitality management.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Hospitality Business Management

MGTOP

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.

- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MIS

- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.

- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.

- 565 Seminar in Marketing 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.

- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – MBA (Pullman)

Degree offered: Master of Business Administration

Faculty working with graduate students: 7

Graduate students: 40

Graduate students receiving assistantships or scholarships: 50%

Program offered: Pullman, DDP, Pullman, Tri-Cities, Vancouver

Tests required: GMAT, Pearson, TOEFL, IELTS, TOEFLI

Deadline: Fall: May 15

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The full-time MBA program at WSU Pullman features nationally prominent faculty, small cohort groups, and encourages frequent and personal interaction among faculty and students. The MBA program focuses on the management of information and hands-on, real-world experiences, including studying abroad. The program is designed to develop data driven decision making, with a global perspective.

- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Business Administration**
- B A**
- 501 Foundations in Marketing V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3** Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

ENTRP

- 501 Technology Entrepreneurship 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Basic business concepts and processes applied to technology commercialization and venture creation.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

Business Administration

FIN

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.

- 501 Microeconomic Theory I 3** Microeconomic theory, multivariate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management 3** Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.

- 528 Portfolio Theory and Financial Engineering 3** Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 595 Advanced Topics in Resource and Production Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

MGTOP

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.

- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- Management Information Systems**
- MIS**
- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

505 Survey of Marketing 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.

506 Marketing Strategy 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.

507 Consumer Behavior 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.

555 Marketing Analytics 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.

561 New Product Marketing 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.

565 Seminar in Marketing 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.

577 Promotional Management 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.

590 Seminar in Consumer Behavior 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.

591 Seminar in Marketing Management 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.

592 Seminar in Marketing Theory 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.

593 Seminar in Research Design 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – MBA (Tricities)

Degree offered: Master of Business Administration

Faculty working with graduate students: 6

Graduate students: 55

Program offered: Tri-Cities, Tri-Cities

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall 2013: July 15

Spring 2014: November 30

Requirements

The MBA program at WSU Tri-Cities consists of 7 core courses, 3 elective courses, 7 foundation courses, and two additional credits for the final project and presentation required during the student's last semester. The seven core courses provide students with skill development in strategic leadership, decision making, and in functional business areas including accounting, finance, and marketing. The three electives allow students to concentrate in areas of business interest. The seven foundation courses are designed to accommodate the diversity of entering students with varying academic backgrounds while ensuring a solid foundation in all business areas. These courses will be waived if equivalent coursework has been completed, however, if these courses are needed they must be completed prior to enrollment in the MBA core or elective courses.

Program Description

Graduate Programs in the College of Business at Washington

State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

The MBA program at WSU Tri-Cities is designed as a part-time program for working professionals with broad academic backgrounds and a desire to prepare themselves for leadership responsibilities in today's global economy. The program blends theory with practice to build the technical tools and relational skills demanded of top business leaders while providing experience in identifying, analyzing and interpreting data relevant to management decisions.

Training and Professional Development Opportunities

Opportunities to earn 6-sigma green or black belts

Post-Graduate Employment Opportunities

Any field of business

Post-Graduate Career Placements

Some have started their own businesses, some have been promoted within their current companies, and still others have moved on to changing their career path. We had a mining engineer who started the program with the goal of going into hospital administration. Within three months of completing his degree, he had the job he wanted with a hospital.

ACCTG

- 530 Accounting Theory 3** Course Prerequisite: Admission to the Master of Accounting program. Recent developments with respect to the determination of income and the valuation of assets.
- 532 Contemporary Accounting Cases and Problems 3** Course Prerequisite: Admission to the Master of Accounting program. Accounting theory applied to external financial reporting practices.

- 533 Accounting, Performance Measurement and Controls 3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Managerial evaluation of budgeting, cost accounting, and financial analysis techniques; their utilization in control of operations.
- 535 Advanced Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Federal income tax impact on corporations, S corporations, partnerships, estates, trusts and their beneficial owners.
- 537 Professional Research 3** Course Prerequisite: Admission to the Master of Accounting program. Methodology used by accounting professionals to research applied problems in taxation, accounting, and auditing; communicate results.
- 538 Seminar in Cost/Managerial Accounting 3** Course Prerequisite: Admission to the Master of Accounting program. Cost concepts, cost and managerial accounting systems; current issues and research in cost and managerial accounting.
- 539 Seminar in Public Accounting and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Public accounting and auditing to present; current issues including statistical sampling and computers.
- 540 Corporate Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Application of federal tax provisions and rules pertaining to corporations, including S corporations; tax planning and consequences of corporate decisions.
- 541 Flow Through Entities 3** Course Prerequisite: Admission to the Master of Accounting program. Tax law and preparation requirements for entities in which tax elements passes thorough to the owner's individual income tax return.
- 542 Gifts, Estates and Trusts 3** Course Prerequisite: Admission to the Master of Accounting program. Estate and gift tax law.
- 543 Special Topics in Accounting 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the Master of Accounting program. Critical topics in accounting including new developments.
- 544 Advanced Accounting Systems and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Advanced topics in accounting systems, auditing and controls.
- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- FIN**
- 500 Macroeconomic Theory I** 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I** 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II** 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II** 3 Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics** 3 Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists** 3 Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I** 3 Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II** 3 Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management** 3 Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering** 3 Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).

- 595 Advanced Topics in Resource and Production Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- MGTOP**
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.

- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.

- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MIS

- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.

- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

- 505 Survey of Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.

- 507 Consumer Behavior 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.
- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – MBA (Vancouver)

Degree offered: Master of Business Administration

Faculty working with graduate students: 7

Graduate students: 50

Program offered: Vancouver, Vancouver

Tests required: GMAT, TOEFL

Deadline: Fall: January 10

Spring: October 1 (July 1 international)

Summer: January 10

Requirements

All Professional MBA students conduct a final 2-credit oral presentation/exam

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also available online.

Degree Description

Apply to the only AACSB-accredited, stakeholder-focused MBA program offered anywhere, and watch your career take off. Washington State University Vancouver's MBA program was honored among the Aspen Institute's "Beyond Grey Pinstripes Global 100" top alternative business schools in 2009 for its nationally recognized and respected faculty and globally relevant stakeholder focus. WSU Vancouver's MBA program integrates a stakeholder focus throughout all courses. You will come away with a clear understanding of the interdependence between a business and its stakeholders-employees, investors, customers, suppliers, and public constituencies. You will learn to apply theory to practice and adopt an executive-level perspective that empowers you to make decisions and take action.

ACCTG

- 530 Accounting Theory 3** Course Prerequisite: Admission to the Master of Accounting program. Recent developments with respect to the determination of income and the valuation of assets.
- 532 Contemporary Accounting Cases and Problems 3** Course Prerequisite: Admission to the Master of Accounting program. Accounting theory applied to external financial reporting practices.
- 533 Accounting, Performance Measurement and Controls 3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Managerial evaluation of budgeting, cost accounting, and financial analysis techniques; their utilization in control of operations.
- 535 Advanced Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Federal income tax impact on corporations, S corporations, partnerships, estates, trusts and their beneficial owners.
- 537 Professional Research 3** Course Prerequisite: Admission to the Master of Accounting program. Methodology used by accounting professionals to research applied problems in taxation, accounting, and auditing; communicate results.
- 538 Seminar in Cost/Managerial Accounting 3** Course Prerequisite: Admission to the Master of Accounting program. Cost concepts, cost and managerial accounting systems; current issues and research in cost and managerial accounting.
- 539 Seminar in Public Accounting and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Public accounting and auditing to present; current issues including statistical sampling and computers.
- 540 Corporate Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Application of federal tax provisions and rules pertaining to corporations, including S corporations; tax planning and consequences of corporate decisions.
- 541 Flow Through Entities 3** Course Prerequisite: Admission to the Master of Accounting program. Tax law and preparation requirements for entities in which tax elements passes thorough to the owner's individual income tax return.
- 542 Gifts, Estates and Trusts 3** Course Prerequisite: Admission to the Master of Accounting program. Estate and gift tax law.
- 543 Special Topics in Accounting 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the Master of Accounting program. Critical topics in accounting including new developments.
- 544 Advanced Accounting Systems and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Advanced topics in accounting systems, auditing and controls.
- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration**B A**

- 501 Foundations in Marketing V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.
- 502 Foundations in Operations Management V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3**
Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3**
Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration**FIN**

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).

- 521 Interest Rates and Financial Markets 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management 3** Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering 3** Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 595 Advanced Topics in Resource and Production Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management

MGMT

- 584 Seminar in Entrepreneurship 3** Course Prerequisite: Admission to the Ph.D. in Business Administration. Advanced, doctoral-level topics in entrepreneurship.
- 585 Advanced Negotiation Skills 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Bargaining skills in multi-stakeholder settings; experiential work.
- 594 Seminar in Organizational Theory 3** Course Prerequisite: Admission to the Ph.D. in Business Administration. Advanced, doctoral-level topics in organizational theory.
- 595 Seminar in Strategic Management 3** Course Prerequisite: Admission to the Ph.D. in Business Administration. Advanced, doctoral-level topics in Strategic Management.
- 597 Seminar in International Management 3** Course Prerequisite: Admission to the Ph.D. in Business Administration. Advanced, doctoral-level topics in International Management.
- 599 Seminar in Management (Organizational Behavior) 3** Course Prerequisite: Admission to PhD programs in business. Advanced doctoral-level topics in organizational behavior.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management

MGTOP

516 Time Series 3 ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.

519 Applied Multivariate Analysis 3 Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T² and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.

540 Deterministic Business Models 3 Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.

556 Advanced Business Modeling 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.

581 Operations Management 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.

582 Personnel and Human Resource Management 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.

587 Professional Ethics and Practice in Business 3 Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.

588 Management of Innovation 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).

589 Seminar in Management 3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.

590 Strategy Formulation and Organizational Design 3 Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.

591 Statistical Analysis for Business Decisions 3 Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.

593 Managerial Leadership and Productivity 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.

596 Doctoral Topics V 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.

597 Doctoral Topics 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.

598 Research and Professional Development 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MIS

- 557 Designing Business Intelligence Systems** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.
- 572 Database Management Systems** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations** 3 Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.
- 596 Doctoral Topics** 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods** 3 Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics** 3 Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development** 3 Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.

- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

- 505 Survey of Marketing** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.
- 506 Marketing Strategy** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.
- 507 Consumer Behavior** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 555 Marketing Analytics** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.
- 561 New Product Marketing** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.
- 565 Seminar in Marketing** 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.
- 577 Promotional Management** 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.
- 590 Seminar in Consumer Behavior** 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.

- 591 Seminar in Marketing Management 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.
- 592 Seminar in Marketing Theory 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.
- 593 Seminar in Research Design 3** Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – MBA-Executive (Online)

Degree offered: Master of Business Administration

Faculty working with graduate students: 13

Graduate students: 25

Program offered: DDP, DDP

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: August 8
 Spring: December 13
 Summer: April 25
 Fall: August 6

Requirements

Students will complete a unique, viable business plan as their final project.

ACCTG

- 530 Accounting Theory 3** Course Prerequisite: Admission to the Master of Accounting program. Recent developments with respect to the determination of income and the valuation of assets.
- 532 Contemporary Accounting Cases and Problems 3** Course Prerequisite: Admission to the Master of Accounting program. Accounting theory applied to external financial reporting practices.
- 533 Accounting, Performance Measurement and Controls 3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Managerial evaluation of budgeting, cost accounting, and financial analysis techniques; their utilization in control of operations.
- 535 Advanced Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Federal income tax impact on corporations, S corporations, partnerships, estates, trusts and their beneficial owners.
- 537 Professional Research 3** Course Prerequisite: Admission to the Master of Accounting program. Methodology used by accounting professionals to research applied problems in taxation, accounting, and auditing; communicate results.
- 538 Seminar in Cost/Managerial Accounting 3** Course Prerequisite: Admission to the Master of Accounting program. Cost concepts, cost and managerial accounting systems; current issues and research in cost and managerial accounting.
- 539 Seminar in Public Accounting and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Public accounting and auditing to present; current issues including statistical sampling and computers.
- 540 Corporate Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Application of federal tax provisions and rules pertaining to corporations, including S corporations; tax planning and consequences of corporate decisions.

- 541 Flow Through Entities 3** Course Prerequisite: Admission to the Master of Accounting program. Tax law and preparation requirements for entities in which tax elements passes thorough to the owner's individual income tax return.
- 542 Gifts, Estates and Trusts 3** Course Prerequisite: Admission to the Master of Accounting program. Estate and gift tax law.
- 543 Special Topics in Accounting 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the Master of Accounting program. Critical topics in accounting including new developments.
- 544 Advanced Accounting Systems and Auditing 3** Course Prerequisite: Admission to the Master of Accounting program. Advanced topics in accounting systems, auditing and controls.
- 545 International Taxation 3** Course Prerequisite: Admission to the Master of Accounting program. Tax issues for international transactions of businesses and individuals.
- 546 Accounting for Income Taxes 3** Comprehensive coverage of accounting income taxes.
- 550 Introduction to Financial and Managerial Accounting V 2-3** Course Prerequisite: Admission to the MBA or Business PhD programs only. Fundamentals of financial and managerial accounting; primarily for graduate students who wish to meet the MBA core requirements in accounting.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in accounting.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the Master of Accounting program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 502 Foundations in Operations Management V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.
- 503 Foundations in Business Law V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.
- 504 Foundations in Finance V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.
- 514 Business Analytics: Transforming Data into Decisions 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.
- 520 Resources, Stakeholders and Competitive Advantage 3** Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.
- 579 MBA Capstone 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

B A

- 501 Foundations in Marketing V 2-3** May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.

Business Administration

ENTRP

- 501 Technology Entrepreneurship 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Basic business concepts and processes applied to technology commercialization and venture creation.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

Business Administration

FIN

- 500 Macroeconomic Theory I 3** Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I 3** Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II 3** Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II 3** Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics 3** Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).

- 510 Statistics for Economists 3** Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I 3** Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II 3** Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 521 Interest Rates and Financial Markets 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Real and nominal interest rates; bond pricing; term and risk structure of interest rates; investment and commercial banking; financial futures.
- 525 Advanced Financial Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Theory of financial management; quantitative analysis of financial problems of the firm; empirical studies on financing modern corporations.
- 526 Financial Management 3** Course Prerequisite: Admission to the MBA or Business Ph.D. programs. Advanced topics in corporate finance, including capital budgeting, cost of capital, capital structure, pay-out policy, and enterprise valuation.
- 527 Investment Analysis 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. A decision-making approach to the problems of asset management for personal and business portfolio.
- 528 Portfolio Theory and Financial Engineering 3** Course Prerequisite: FIN 527; admission to the MBA, Master of Accounting, or Business PhD programs. The theory of portfolio management and the use of derivative securities in portfolio risk management.
- 581 International Finance 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international finance; financial management of multinational corporations; international investments.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).

- 595 Advanced Topics in Resource and Production Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Same as ECONS 595.
- 596 Advanced Topics in Financial Economics V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business, or ECONS 500 and ECONS 501. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration

I BUS

- 580 International Business Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Decision making in the international environment; political, cultural, and economic risk management.
- 582 International Marketing Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Principles of international marketing, marketing decision making in international environments, problems of adapting marketing programs to international markets.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

Business Administration

MGTOP

- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.

- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V 1-4** May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 572 Database Management Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Database management, data modeling, system design and implementation; the application of DBMS technologies to organizational and business problems.
- 574 Telecommunications and Networking in Business 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Business applications of data communications, infrastructure, protocols, topologies and management, the design of wired and wireless solutions, and related research issues.
- 575 Electronic Commerce and the Internet 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technologies underlying electronic commerce and the internet; strategies and implementation plans for managing the implementation of electronic commerce systems.
- 576 Emerging Technologies 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special and advanced topics in MIS.
- 580 Information Systems Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Data processing organization; operations, application development, computer selection, management of computer personnel and systems.
- 582 Systems Analysis and Design 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Research on and application of systems analysis, design, development and management of information systems; systems development life cycle.
- 595 MIS Research Foundations 3** Course Prerequisite: Admission to PhD programs in business. Seminal works in MIS, philosophy of science and theory development.
- 596 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management information systems.
- 597 MIS Research Methods 3** Course Prerequisite: Admission to PhD programs in business. Study and application of research methods used in MIS research.
- 598 MIS Research Topics 3** Course Prerequisite: Admission to PhD programs in business. Major streams of research in MIS.
- 599 MIS Research Proposal Development 3** Course Prerequisite: Admission to PhD programs in business. Seminar on the process of creating a MIS research proposal.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- Management Information Systems**
- MIS**
- 557 Designing Business Intelligence Systems 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Design and use of business intelligence systems, and business performance analytics.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Management Information Systems

MKTG

505 Survey of Marketing 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing management; relevance of marketing to company profitability and consumer satisfaction; decision regarding price, product, promotion, and distribution.

506 Marketing Strategy 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing analyses needed to recommend and implement a marketing strategy. Includes coverage of industry, competitor, and customer analysis as well as decision factors related to segmentation, positioning, and the marketing mix.

507 Consumer Behavior 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.

555 Marketing Analytics 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Development of marketing analytics skills utilizing large data sets to identify marketing and consumer trends in online and offline markets.

561 New Product Marketing 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Introduction of new products that are based on new technology; exploration of actual products in the market.

565 Seminar in Marketing 3 May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Marketing structure and behavior from economic and behavioral perspectives; social evaluation and behavioral implications of marketing strategy.

577 Promotional Management 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Integrated promotion into the marketing plan; methods, organization, communications, media selection, and campaigns.

590 Seminar in Consumer Behavior 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in consumer behavior.

591 Seminar in Marketing Management 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing management.

592 Seminar in Marketing Theory 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in marketing theory.

593 Seminar in Research Design 3 Course Prerequisite: Admission to PhD programs in business. Advanced, doctoral-level topics in research design.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Business Administration – Operations

Degree offered: Doctor of Philosophy

Faculty working with graduate students: 4

Graduate students: 8

Graduate students receiving assistantships or scholarships: 87%

Tests required: GMAT, IELTS, MELAB, Pearson, TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Research Tool Requirements include 12 hours. 30 additional required hours in major and minor fields. 1-credit professional development seminar. 24-credit requirement for Ph.D. research. Students are required to pass a qualifying exam. The exam is typically taken in June after the first year of study. Only one retake is allowed, typically in the subsequent August.

Program Description

Graduate Programs in the College of Business at Washington State University consist of a PhD in Business Administration with 7 areas of concentration (Accounting, Finance, Hospitality and Tourism, Information Systems, Management, Marketing, and Operations), a Master's of Accounting (MAcc) and Master's of Business Administration (MBA). The PhD is a four year residential program available in Pullman, WA. The MAcc is available in Pullman and Vancouver, WA. The MBA is available in Pullman, Tri-Cities, Vancouver and online with an Executive option also

available online.

Degree Description

The program in Operations and Management Science prepares students for careers in business, industry, or government using expertise garnered in applied problem solving and data analysis. Students receive rigorous fundamental training in statistics, research methods, mathematics, and operations research, followed by theoretical study within their respective fields of interest. All students are expected to produce publishable research for peer-reviewed journals prior to graduation.

Training and Professional Development Opportunities

Six Sigma Green Belt and Six Sigma Black Belt

Post-Graduate Employment Opportunities

University Professor; Management Science Analyst; Statistician

Post-Graduate Career Placements

American University of Sharjah--UAE; Axio Research; Central Washington University; Chapman University; Ching-Yi University--China; Fort Hays State University; Grand Valley State University; KeiMyung University; Marquette University; Microsoft Corporation; Min Chuan University; National Renewable Energy Lab; Northeastern University; Oregon State University; Southeastern Oklahoma State University; Southwestern University of Finance and Economics--China; State University of New York--Geneseo; Tatung Institute of Technology; University of Kansas; University of Michigan--Flint; University of North Texas; University of Tennessee--Martin; University of Washington

Faculty

Sung Ahn, Timothy Baker, Stergios Fotopoulos and Charles Munson.

MATH

464 Linear Optimization 3 Course Prerequisite: MATH 273 or MATH 283. Linear and integer programming; optimization problems; applications to economic and military strategies; rectangular games; minimax theory.

STAT

443 Applied Probability 3 Course Prerequisite: MATH 172 or MATH 182; MATH 220 or MATH 230. Axioms of probability theory; random variables; expectation; generating function; law of large numbers; central limit theorem; Markov chains. (Cross-listed course offered as STAT 443, MATH 443).

501 Foundations in Marketing V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in marketing for MBA students.

502 Foundations in Operations Management V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in operations management for MBA students.

503 Foundations in Business Law V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in business law for MBA students.

504 Foundations in Finance V 2-3 May be repeated for credit; cumulative maximum 6 hours. Foundation topics in finance for MBA students.

514 Business Analytics: Transforming Data into Decisions 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Advanced decision-making concepts utilizing relevant datasets for data-driven problem-solving and formulating decision analyses to evaluate and recommend management action.

520 Resources, Stakeholders and Competitive Advantage 3 Course Prerequisite: Admission to the MBA program. Creating competitive advantage using resources provided by key stakeholders.

579 MBA Capstone 3 Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analyze, evaluate, and recommend management actions for a specific strategic business project (for an existing organization or new venture).

596 Doctoral Topics V 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in business research and theory.

598 Research and Professional Development 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 500 Proseminar** 1 May be repeated for credit; cumulative maximum 2 hours.
- 501 Real Analysis** 3 Metric spaces, convergence, continuous functions, infinite series, differentiation and integration of functions of one and several variables. Required preparation must include advanced calculus or real analysis.
- 502 Introduction to Functional Analysis** 3 Course Prerequisite: MATH 501. Normed linear spaces, Banach spaces, introduction to Hilbert space, linear operators. Required preparation: Advanced linear algebra.
- 503 Complex Analysis** 3 Course Prerequisite: MATH 501. Analytic functions, complex integration, Taylor and Laurent series, conformal mapping, Riemann surfaces and analytic continuation.
- 504 Measure and Integration** 3 Course Prerequisite: MATH 501. Lebesgue measure, Lebesgue integration, differentiation, L spaces, general measure and integration, Radon-Nikodym Theorem, outer measure and product measures.
- 505 Abstract Algebra** 3 Groups, rings, fields, and homological algebra. Required preparation must include abstract algebra.
- 507 Advanced Theory of Numbers** 3 May be repeated for credit; cumulative maximum 6 hours. Analytic and algebraic number theory.
- 508 Topics in Applied Analysis** 3 Course Prerequisite: MATH 502. Advanced treatment of applications using techniques from fundamental analysis, convexity, analytic function theory, asymptotics, and differential equations.
- 511 Advanced Linear Algebra** 3 Vector spaces, inner products, unitary equivalence, similarity, Jordan forms, normality, spectral theory, singular value decomposition, norms and inequalities. Required preparation must include advanced linear algebra.
- 512 Ordinary Differential Equations** 3 Existence of solutions; linear systems; qualitative behavior, especially stability; periodic solutions. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 516 Simulation Methods** 3 Model formulation and simulation in business, industry, and government; simulation languages; analysis of simulation output; applications. Credit not granted for both MATH 416 and MATH 516. Required preparation must include probability and statistics and programming experience.
- 525 General Topology** 3 Sets, metric spaces, topological spaces; continuous mappings, compactness, connectedness, local properties, function spaces, and fundamental groups. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 531 Intersections of Culture and Mathematics** 3 Gender/race/ethnicity differences; social consequences; cultural influences on development and learning of mathematics; role of women, people of color in mathematics. Credit not granted for both MATH 431 and MATH 531.
- 532 Mathematics for College and Secondary Teachers** 3 Course Prerequisite: By instructor permission. Pre-algebra, algebra functions and geometry examined from an advanced perspective, for secondary and lower level college teachers. Credit not granted for both MATH 432 and MATH 532.
- 533 Teaching College Mathematics** 1 May be repeated for credit; cumulative maximum 3 hours. Course Prerequisite: Graduate standing in Mathematics. Theory and practice of mathematics instruction at the collegiate level.
- 534 Theories of Learning in Mathematics** 3 Math learning theories, including behaviorism, information processing, constructivism, situated cognition, communities of practice; influence on teaching and learning mathematics.
- 535 Research Paradigms in Mathematics Education** 3 Course Prerequisite: MATH 534. Current research paradigms in math education research; critique research designs used in current mathematics education research article; design and carry out a research project.
- 536 Statistical Computing** 3 (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 540 Applied Mathematics I** 3 Partial differential equations; Fourier series and integrals; Bessel functions; calculus of variations; vector calculus; applications. Credit not granted for both MATH 440 and MATH 540. Required preparation must include differential equations.
- 541 Applied Mathematics II** 3 Complex variable theory including analytic functions, infinite series, residues, and conformal mapping; Laplace transforms; applications. Credit not granted for both MATH 441 and MATH 541. Required preparation must include differential equations.
- 543 Approximation Theory** 3 Univariate polynomial and rational approximation techniques; approximation using splines and wavelets; selected topics in multivariate approximation; algorithms for approximation. Required preparation must include numerical analysis.
- 544 Advanced Matrix Computations** 3 Advanced topics in the solution of linear systems and eigenvalue problems, including parallel matrix computations. (Cross-listed course offered as MATH 544, CPT S 531). Required preparation must include numerical analysis. Required preparation must include numerical analysis.

- 545 Numerical Analysis of Evolution Equations 3** Discretization and numerical solution of partial differential equations of evolution; stability, consistency, and convergence; shocks; conservation of forms. Required preparation must include numerical analysis.
- 546 Numerical Analysis of Elliptic PDEs 3** Methods of discretizing elliptic partial differential equations and solving the resulting systems of equations; error analysis. Required preparation must include numerical analysis.
- 548 Numerical Analysis 3** Fundamentals of numerical computation; finding zeroes of functions, approximation and interpolation; numerical integration (quadrature); numerical solution of ordinary differential equations. (Cross-listed course offered as MATH 448, CPT S 430, CPT S 530). Required preparation must include differential equations and a programming course.
- 553 Graph Theory 3** Graphs and their applications, directed graphs, trees, networks, Eulerian and Hamiltonian paths, matrix representations, construction of algorithms. (Cross-listed course offered as MATH 453, CPT S 453). Required preparation must include linear algebra. Required preparation must include linear algebra.
- 555 Topics in Combinatorics 3** May be repeated for credit; cumulative maximum 6 hours. Combinatorics, generating functions, recurrence relations, inclusion-exclusion, coding theory; experimental design, graph theory.
- 560 Partial Differential Equations I 3** Partial differential equations and other functional equations: general theory, methods of solution, applications. Required preparation must include a year-long sequence in advanced calculus or real analysis.
- 561 Partial Differential Equations II 3** Course Prerequisite: MATH 560. Continuation of MATH 560.
- 563 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 564 Nonlinear Optimization I 3** Theory and algorithms for unconstrained nonlinear optimization problems, including line search, trust region, conjugate gradient, Newton and quasi-Newton methods. Required preparation must include advanced multivariate calculus, and a programming language. Recommended preparation: MATH 464, 544.
- 565 Nonlinear Optimization II 3** Course Prerequisite: MATH 564. Theory and algorithms for constrained linear and nonlinear optimization including interior point, quadratic programming, penalty, barrier and augmented Lagrangian methods.
- 566 Optimization in Networks 3** Formulation and solution of network optimization problems including shortest path, maximal flow, minimum cost flow, assignment, covering, postman, and salesman. Credit not granted for both MATH 466 and MATH 566. Required preparation must include linear programming.
- 567 Integer and Combinatorial Optimization 3** Theory and applications of integer and combinatorial optimization including enumerative, cutting plane, basis reduction, relaxation and matching methods. Required preparation must include linear optimization.
- 568 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 569 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 570 Mathematical Foundations of Continuum Mechanics I 3** The basic mathematical theory of continuum mechanics and its relation to perturbation techniques and stability methods. Required preparation must include differential equations and advanced calculus or real analysis.
- 571 Mathematical Foundations of Continuum Mechanics II 3** Course Prerequisite: MATH 570. Continuation of MATH 570.
- 574 Topics in Optimization 3** May be repeated for credit; cumulative maximum 12 hours. Advanced topics in the theory and computing methodology in optimization with emphasis on real-life algorithmic implementations. Required preparation must include advanced multivariable calculus and a programming language.
- 575 Asset Pricing in Financial Engineering 3** Mathematical methods for various models on valuation of stocks and options, with rigorous mathematical analysis on pricing and hedging techniques. Recommended preparation: Advanced calculus and some knowledge on differential equations.
- 576 Quantitative Risk Management 3** Fundamental concepts in modern risk theory and mathematical methods in quantitative risk management; coherent risk measures, volatility modeling, multivariate dependence analysis using copulas, risk aggregation and allocation, and extreme value theory.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Topics in Mathematics V 1-3** May be repeated for credit. Topics in mathematics.
- 583 Topics in Applied Mathematics V 1-3** May be repeated for credit. Topics in applied mathematics.
- 586 Mathematical Modeling in the Natural Science 3** Development of mathematical models for solutions of problems in the physical and life sciences. Credit not granted for both MATH 486 and MATH 586. Required preparation must include differential equations.
- 590 Topics in Mathematics Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Topics in mathematics education.
- 597 Mathematics Instruction Seminar 1** May be repeated for credit; cumulative maximum 5 hours. Introduction to the teaching of university mathematics.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 540 Deterministic Business Models 3** Decision analysis, linear optimization models, nonlinear models, network analysis including PERT, and dynamic programming as applied to business.
- 556 Advanced Business Modeling 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Spreadsheet modeling and solution of business problems using mathematical programming; Monte Carlo simulation, queuing theory, and decision analysis.
- 581 Operations Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Analytical approach to solving problems in production and operations management.
- 582 Personnel and Human Resource Management 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Human resources and personnel administration; selection, training, compensation, performance appraisal, labor relations, health and safety, EEO legislation.
- 587 Professional Ethics and Practice in Business 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Ethical issues faced by businesses in the current environment; traditional sources for discerning professional and ethical practices.
- 588 Management of Innovation 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Technological transitions and technology strategy; knowledge and creativity in organizations; managing innovation processes, technical employees, and cross-functional cooperation. (Cross-listed course offered as MGTOP 588, ENTRP 588).
- 589 Seminar in Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Special topics in management, organization behavior, organization theory, human resource management and strategic management.
- 590 Strategy Formulation and Organizational Design 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Relationship between the formulation of strategy and the selection of effective organizational structures and systems.
- 591 Statistical Analysis for Business Decisions 3** Course Prerequisite: Admission to the Master of Accounting program, MBA program, Master of Public Affairs (MPA) program, or Business Ph.D. programs. Analytical skills for decision-making; data collection and analysis, sampling, inferential, regression methodologies, experimental design, time series, forecasting analysis.
- 593 Managerial Leadership and Productivity 3** Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Organizational behavior and human motivation in the workplace; organization and leadership theories, studies, projects and models leading to improved productivity.
- 596 Doctoral Topics V** 1-4 May be repeated for credit; cumulative maximum 15 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 597 Doctoral Topics 3** May be repeated for credit; cumulative maximum 9 hours. Course Prerequisite: Admission to PhD programs in business. Advanced topics in management and operations.
- 598 Research and Professional Development 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Admission to PhD programs in business. Ph.D.-level professional development colloquium designed to improve research, teaching, and presentation skills and to provide professional socialization.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA, Master of Accounting, or Business PhD programs. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to the MBA program. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course Prerequisite: Admission to PhD programs in business. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.

- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Chemical Engineering

Degree offered: Doctor of Philosophy (Chemical Engineering)

Faculty working with graduate students: 17

Graduate students: 66

Graduate students receiving assistantships or scholarships: 89%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

Through the Voiland School, students may earn either a Master of Science (MS) or a Doctor of Philosophy (PhD) in Chemical Engineering. Within the Chemical Engineering Program we specialize in the development of sustainable energy solutions, understanding environmental systems, and developing systems and devices to improve the health of individuals everywhere. Students may receive chemical engineering degrees working with faculty in Pullman or on the Tri-Cities campus.

Degree Description

Faculty research is broadly focused in three synergistic areas: Sustainable Energy Systems, Bimolecular Engineering, and Biomechanics. Within these areas, projects are focused on: chemical and biological catalysis and kinetics; chemical and biological fuel cells; biofilm engineering; novel sensor technologies; cardiac and reproductive molecular engineering; and molecular, cellular, and musculoskeletal mechanics. Specialized equipment includes a dynamic x-ray diffractometer, a colloidal characterization lab with field scattering capabilities, large scale fermenters, GC, LC, LC/MS chromatographic systems, and Atomic Force and other optical microscopes. The graduate programs are flexible,

allowing students to develop a program that fits individual needs. A master of science is typically completed in 12-15 months, and a doctorate in 3-4 years after completion of the Bachelor of Science degree. Many doctoral students also participate in training programs, such as the NIH-sponsored protein biotechnology training program.

Training and Professional Development Opportunities

The Voiland School offers excellent research facilities, the flexibility to design an individualized academic program, and the ability to work closely with highly engaged faculty. We also offer students the opportunity to participate in an NIH (National Institutes of Health) sponsored training program in protein Biochemistry, and we encourage students to participate in internship programs at partner institutions.

Faculty

Nehal Abu-Lail, Birgitte Ahring, Haluk Beyenal, Howard Davis, Wenji Dong, Su Ha, Cornelius Ivory, Alla Kostyukova, David Lin, Jean-Sabin McEwen, Edward Pate, James Petersen, Bernard Vanwie, Anita Vasavada, Yong Wang, Xiao Zhang and Richard Zollars.

CH E

510 Transport Processes 3 Transport of mass, energy, and momentum; unsteady and steady states as applied to chemical processing; macroscopic and microscopic analyses.

527 Chemical Thermodynamics 3 Thermodynamic laws for design and optimization of thermodynamic systems, equations of state, properties of ideal and real fluids and fluid mixtures, stability, phase equilibrium, chemical equilibrium; applications of thermodynamic principles.

529 Chemical Engineering Kinetics 3 Interpretation of kinetic data and design of nonideal chemical reactors; fundamentals of heterogeneous catalysis, catalyst preparation, characterization, and theory.

541 Chemical Engineering Analysis 3 Mathematical analysis of chemical engineering operations and processes; mathematical modeling and computer application.

- 549 Biochemical Conversion Laboratory 2** (1-3) Analytical techniques in biomass characterization; bioproduct/biofuel production from renewable biomass including biochemical processes.
- 560 Biochemical Engineering 3** Chemical engineering applied to biological systems; fermentation processes, biochemical reactor design, downstream processing, transport phenomena in biological systems, biochemical technology.
- 574 Protein Biotechnology 3** Biotechnology related to the isolation, modification and large scale commercial production, patenting and marketing of useful recombinant proteins and products. (Cross-listed course offered as MBIOS 574, CHE 574). Recommended preparation: MBIOS 513.
- 581 Advanced Topics in Chemical Engineering V** 1-3 May be repeated for credit; cumulative maximum 9 hours. Filtration, reaction engineering, two-phase flow, non-Newtonian fluids, interfacial phenomena, fluidization, novel separations, biomedical engineering.
- 585 Interfacial Phenomena 3** Chemical and physical nature of the interface including the molecular basis for interfacial forces and resulting macroscopic phenomena.
- 596 Research Methods and Presentation I 2** Establish sound practices for graduate research and presentation of results; techniques used for performing through literature searching and establishing and testing research hypotheses.
- 597 Research Methods and Presentation II 2** Establishing sound practices for presentation of research programs and research results.
- 598 Research Seminar 1** May be repeated for credit. Seminar presentations on current topics in chemical engineering research.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Chemical Engineering

Degree offered: Master of Science in Chemical Engineering

Faculty

Nehal Abu-Lail, Birgitte Ahring, Haluk Beyenal, Howard Davis, Wenji Dong, Su Ha, Cornelius Ivory, Alla Kostyukova, David Lin, Jean-Sabin McEwen, Edward Pate, James Petersen, Bernard Vanwie, Anita Vasavada, Yong Wang, Xiao Zhang and Richard Zollars.

CHE

- 510 Transport Processes 3** Transport of mass, energy, and momentum; unsteady and steady states as applied to chemical processing; macroscopic and microscopic analyses.
- 527 Chemical Thermodynamics 3** Thermodynamic laws for design and optimization of thermodynamic systems, equations of state, properties of ideal and real fluids and fluid mixtures, stability, phase equilibrium, chemical equilibrium; applications of thermodynamic principles.
- 529 Chemical Engineering Kinetics 3** Interpretation of kinetic data and design of nonideal chemical reactors; fundamentals of heterogeneous catalysis, catalyst preparation, characterization, and theory.
- 541 Chemical Engineering Analysis 3** Mathematical analysis of chemical engineering operations and processes; mathematical modeling and computer application.
- 549 Biochemical Conversion Laboratory 2 (1-3)** Analytical techniques in biomass characterization; bioproduct/biofuel production from renewable biomass including biochemical processes.
- 560 Biochemical Engineering 3** Chemical engineering applied to biological systems; fermentation processes, biochemical reactor design, downstream processing, transport phenomena in biological systems, biochemical technology.
- 574 Protein Biotechnology 3** Biotechnology related to the isolation, modification and large scale commercial production, patenting and marketing of useful recombinant proteins and products. (Cross-listed course offered as MBIOS 574, CHE 574). Recommended preparation: MBIOS 513.
- 581 Advanced Topics in Chemical Engineering V 1-3** May be repeated for credit; cumulative maximum 9 hours. Filtration, reaction engineering, two-phase flow, non-Newtonian fluids, interfacial phenomena, fluidization, novel separations, biomedical engineering.
- 585 Interfacial Phenomena 3** Chemical and physical nature of the interface including the molecular basis for interfacial forces and resulting macroscopic phenomena.
- 596 Research Methods and Presentation I 2** Establish sound practices for graduate research and presentation of results; techniques used for performing through literature searching and establishing and testing research hypotheses.
- 597 Research Methods and Presentation II 2** Establishing sound practices for presentation of research programs and research results.
- 598 Research Seminar 1** May be repeated for credit. Seminar presentations on current topics in chemical engineering research.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Chemical Engineering

Degree offered: Master of Science in Chemical Engineering – Non Thesis

Faculty working with graduate students: 17

Program offered: Pullman, Tri-Cities

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

Through the Voiland School, students may earn either a Master of Science (MS) or a Doctor of Philosophy (PhD) in Chemical Engineering. Within the Chemical Engineering Program we specialize in the development of sustainable energy solutions, understanding environmental systems, and developing systems and devices to improve the health of individuals everywhere. Students may receive chemical engineering degrees working with faculty in Pullman or on the Tri-Cities campus.

Degree Description

Faculty research is broadly focused in three areas: sustainable energy systems, biomolecular engineering, and biomechanics. Within these areas projects are focused on chemical and biological catalysis and kinetics; chemical and biological fuel cells; biofilm engineering; novel sensor technologies; cardiac and reproductive molecular engineering; and molecular, cellular, and musculoskeletal mechanics. The graduate programs are flexible, allowing students to develop a program that fits individual needs. A Master of Science is typically completed in 12-15 months.

Post-Graduate Employment Opportunities

Graduates may participate in the design and production of chemically based products or they may engage in research leading to new or improved chemical products, products, and uses. Graduates find rewarding work in plant operation, plant

management, university teaching, sales/service, and other functions requiring chemical engineering training. Many students also use their education in chemical engineering as preparation for other professional degrees such as medicine or law.

Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Chemistry

Degree offered: Doctor of Philosophy (Chemistry)

Faculty working with graduate students: 28

Graduate students: 88

Graduate students receiving assistantships or scholarships: 98%

Tests required: GRE (Combined), TOEFL

Deadline: Fall: March 1 (January 15 international)

Spring: October 1

Program Description

The Department of Chemistry offers courses of study leading to the MS and PhD degrees with opportunities for research in seven fields: analytical, environmental, radiochemistry, materials chemistry, inorganic, organic and bioorganic, and physical chemistry. The low student-to-faculty ratio assures students of individual guidance, yet the total size of the department provides excellent facilities for research, including the latest instrumentation. The program of study for graduate students in the Department of Chemistry provides a good balance between formal course work and research experience. In addition to the normal core classes,

first-year graduate students also take a seminar course which provides a forum for the presentation and discussion of current research in chemistry within the department. With this exposure, students are typically comfortable selecting a research adviser by the end of their first semester. Individual divisions also have a weekly seminar program in which graduate students participate, gaining experience in presenting and discussing their own research.

Degree Description

The written PhD thesis is the capstone of your graduate career and will describe a significant body of original scientific research. The adequacy of this work will be judged by your research advisor and committee members as well as the entire graduate faculty. Most successful PhD candidates are already the first author on several papers by the time they reach this stage of their career. Though there is no set number of publications required for completion of the PhD, a typical thesis will be the equivalent of at least two journal articles, with additional introductory material and experimental detail.

Training and Professional Development Opportunities

Divisional seminars within the department, participation in regional and national meetings

Post-Graduate Employment Opportunities

Some of our alumni are heads of international corporations and faculty members in Chemistry Departments around the country.

Post-Graduate Career Placements

Many of our graduates have gotten jobs in the state crime lab, teaching positions and in many industries.

Paul Benny, Clifford Berkman, James Brozik, Aurora Clark, Sue Clark, Gregory Crouch, Philip Garner, Herbert Hill, Kerry Hipps, James Hurst, Jeffrey Jones, Chulhee Kang, Jeremy Lessmann, Alexander Li, Donald Matteson, Ursula Mazur, Jeanne McHale, Ken Nash, Kirk Peterson, Peter Reilly, Robert Ronald, James Satterlee, James Schenk, Louis Scudiero, Nathalie Wall, Scot Wherland, Ming Xian and Choong-Shik Yoo.

CHEM

- 501 Advanced Inorganic Chemistry I** 3 Periodic table survey, typical compounds and their reactivity; models and reactivity, acid-base, oxidation-reduction, and electronic structure contributions.
- 503 Advanced Topics in Inorganic Chemistry** V 1-3 May be repeated for credit. Recent significant developments.

- 509 Chemical Group Theory** 3 Mathematical definitions of groups and representations, applications to chemical structure and spectra, ligand field theory, chemical reactions and selection rules.
- 510 Introduction to Proteomics** 2 Techniques and applications for the analysis of the proteome. Recommended preparation: MBIOS 303 or equivalent.
- 512 Bioanalysis** 2 Methods for the measurement of biological compounds.
- 514 Mass Spectrometry** 2 Current methods, techniques and interpretation of mass spectrometric analysis. Recommended preparation: CHEM 425 or equivalent.
- 517 Chromatography** 2 Recommended preparation: CHEM 425 or equivalent.
- 518 Electrochemistry** 2 Recommended preparation: CHEM 425 or equivalent.
- 520 Advanced Analytical Chemistry** 3 Statistics in chemical analysis; sampling; control of contamination and losses in analysis; electrochemical methods; separation in analysis; spectroscopic techniques. Recommended preparation: CHEM 425 or equivalent.
- 521 Radiochemistry and Radiotracers** 2 Graduate-level counterpart of CHEM 421; additional requirements. Recommended preparation: CHEM 425 or equivalent.
- 522 Radiochemistry Laboratory** 1 (0-3) Graduate-level counterpart of CHEM 422; additional requirements. Required preparation must include CHEM 222, CHEM 331, and PHYSICS 202 or equivalent.
- 527 Environmental Chemistry** 2 Natural water chemistry, AGRI processes, kinetics, thermodynamics, modeling in lake, river, and sea water.
- 529 Selected Topics in Analytical Chemistry** V 1-3 May be repeated for credit. Selected current developments.
- 531 Advanced Physical Chemistry I** 3 Classical physical chemistry including basic thermodynamics and kinetics; an introductory discussion of surface chemistry and electrochemistry. Recommended preparation: CHEM 331 or equivalent.
- 532 Advanced Physical Chemistry II** 3 Introduction to quantum mechanics; postulates of quantum mechanics; exact solutions and approximation methods. Recommended preparation: CHEM 332 or equivalent.
- 534 Chemical Statistical Mechanics** 3 Statistical theory of thermodynamic variables and chemical equilibrium; calculation of equilibrium properties from spectral data; fluctuations about equilibrium; quantum statistics.
- 536 Quantum Chemistry** 3 Course Prerequisite: CHEM 532. Quantum mechanics applied to chemical problems: states of atoms and molecules, transitions and spectra, ladder operators and many electron methods.
- 537 Advanced Topics in Physical Chemistry** V 1-3 May be repeated for credit. Selected subjects; irreversible thermodynamics; chemical bonding; NMR; ligand field theory; x-ray diffraction; neutron diffraction.
- 540 Physical Organic Chemistry** 3 Course Prerequisite: CHEM 542. The major classes of organic reaction mechanisms and their significance; kinetics and introductory theory.

- 542 Advanced Organic Chemistry 3** Synthesis of organic compounds; recent developments from current literature.
- 543 Bioorganic Chemistry 3** Course Prerequisite: CHEM 542. Chemistry of biological systems, medicinal chemistry, protein chemistry, enzyme mechanisms and inhibitors.
- 544 Advanced Topics in Organic Chemistry V 1-3** May be repeated for credit. Current research in organic chemistry.
- 545 Synthetic Organic Chemistry 3** Course Prerequisite: CHEM 542. Modern synthetic methods and strategies; detailed reaction mechanisms, reaction scope and issues in catalysis will be discussed.
- 546 Spectroscopic Identification of Organic Compounds 3** Structural interpretation of mass spectrometry and IR, UV-VIS and NMR spectrometry of small molecule organic compounds.
- 550 Special Topics in Nuclear Processes and Radioactive Waste Management V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By instructor permission. Fundamental chemistry of the nuclear industry, chemical processing and waste management.
- 555 Teaching Chemistry 1** Teaching chemistry; workshops for new graduate teaching assistants in chemistry focusing on tutorials and labs.
- 564 Molecular Phenomena 3** Phenomena which yield information on structures, energy levels, and interactions of molecules in solid, liquid, and gaseous phases.
- 572 Enzyme Reaction Mechanisms 3** Course Prerequisite: CHEM 542. Methods used to explore enzyme mechanisms; how enzymes catalyze reactions; overview of enzyme co-factors and exploration of differing classes of enzyme catalyzed reactions.
- 581 Environmental Chemistry I 3** Chemistry of natural and pollutant species and their reactions in the atmospheric environment.
- 590 Introduction to Research Topics 1** Presentation and description of research areas and projects of current interest to faculty.
- 592 Seminar in Analytical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in analytical chemistry taken from research in progress or current literature.
- 593 Seminar in Physical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in physical chemistry taken from research in progress or current literature.
- 594 Seminar in Organic Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in organic chemistry taken from research in progress or current literature.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Chemistry

Degree offered: Master of Science in Chemistry

Faculty working with graduate students: 28

Graduate students: 4

Graduate students receiving assistantships or scholarships: 100%

Program offered: Pullman, Tri-Cities

Tests required: GRE (Combined), TOEFL

Deadline: Fall: March 1 (January 15 international)
Spring: October 1

Program Description

The Department of Chemistry offers courses of study leading to the MS and PhD degrees with opportunities for research in seven fields: analytical, environmental, radiochemistry, materials chemistry, inorganic, organic and bioorganic, and physical chemistry. The low student-to-faculty ratio assures students of individual guidance, yet the total size of the department provides excellent facilities for research, including the latest instrumentation. The program of study for graduate students in the Department of Chemistry provides a good balance between formal course work and research experience. In addition to the normal core classes, first-year graduate students also take a seminar course which provides a forum for the presentation and discussion of current research in chemistry within the department. With this exposure, students are typically comfortable selecting a research adviser by the end of their first semester. Individual divisions also have a weekly seminar program in which graduate students participate, gaining experience in presenting and discussing their own research.

Degree Description

While the WSU Chemistry graduate program emphasizes the Ph.D. degree, we appreciate that there are circumstances which

favor awarding of the M.S. degree. The degree of Master of Science is awarded in recognition of scholarship and contributions to knowledge in the field of Chemistry. The Master's Degree is based on research carried out in the laboratories of the Department and allows students to gain experience in modern experimental techniques and to familiarize themselves with the daily workings of a laboratory. Master's Degree students (on either the thesis or non-thesis track) must carry out a research project under the supervision of a member of the Chemistry Department faculty. Master's students are expected to participate fully in the scientific life of the Department and to attend the various meetings and seminars that take place.

Civil Engineering

Degree offered: Doctor of Philosophy (Civil Engineering)

Faculty working with graduate students: 30

Graduate students: 35

Graduate students receiving assistantships or scholarships: 88%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

The graduate programs in Civil Engineering are offered leading to the Master of Science in Civil Engineering degree, the Master of Science in Environmental Engineering degree, and the Doctor of Philosophy Civil Engineering degree. The department also participates in university programs leading to the M.S. in Environmental Science and the Ph.D. in Engineering Science. At the Master's level, specific programs are available within each area.

Degree Description

Students may be accepted into the graduate program with undergraduate degrees in other than Civil Engineering (e.g., related areas such as mechanical engineering, materials science, physics, etc.). These students, however, may need to complete additional courses to cover deficiencies. Courses taken to satisfy deficiencies cannot be included in the program of study. Each student, in consultation with his/her graduate committee, will develop a plan of study. This plan outlines what courses will be required for completion of the degree. To develop a plan of study, students may choose from a variety of graduate and selected undergraduate courses offered in the area of emphasis. In addition, courses may be selected from a number of related courses in other programs in the Department of Civil and Environmental Engineering, as well as in other departments of the University. The doctorate program is individually tailored to each student's need and interest.

Training and Professional Development Opportunities

Opportunities for National Lab internships, federal agency policy analysis internship, or an opportunity to do development work exist on a case-by-case basis.

Post-Graduate Employment Opportunities

Faculty positions, Consulting positions, National Research Lab appointments

Post-Graduate Career Placements

Multiple faculty positions in the US and overseas. Research Lab

assignments Consultants in premier Civil Engineering firms in the US and overseas.

Jennifer Adam, Michael Barber, Donald Bender, Marc Beutel, Phillip Butterfield, Serena Chung, Candis Claiborn, William Cofer, James Dolan, Karl Englund, Liv Haselbach, Md Hossain, B Jobson, Brian Lamb, Fok-Yan Leung, Heping Liu, David McLean, George Mount, Balasingam Muhunthan, David Pollock, Shelley Pressley, Pizhong Qiao, Shihui Shen, Timothy Vanreken, Joseph Vaughan, Richard Watts, Haifang Wen, Michael Wolcott, Vikram Yadama and David Yonge.

Communication

Degree offered: Doctor of Philosophy (Communication)

Faculty working with graduate students: 18

Graduate students: 24

Graduate students receiving assistantships or scholarships: 87%

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: December 31

Requirements

In addition to the core courses (15 credits), students must complete 6-12 credits of research methods, 15 or more credits in a major concentration area, 9 or more credits in a supporting academic area, and 21-30 dissertation credits. Additional information about the degree requirements can be found on the college web site:

<http://www.communication.wsu.edu/gradstudies/doctoral/docprogreq.htm>

Program Description

The Edward R. Murrow College of Communication's master's and doctorate programs provide flexible study in communication studies in a research-based curriculum. Areas of concentration include media, health and social issues, organizations and culture. Students develop unique programs of study in consultation with lead faculty. Criteria for study are based on individual academic interests. The Murrow College is nationally and internationally recognized for its excellence in scholarship and faculty-student interaction. As one of few colleges in the country that incorporates communication studies and mass communication, the Murrow Program provides graduate students the opportunity to work closely with diverse faculty whose research is far-reaching. Students of The Edward R. Murrow College of Communication will graduate with a thorough understanding of theoretical and practical issues related to their chosen concentration along with opportunities to learn from industry leaders. Graduates are prepared for careers in teaching, research, and public service. Potential employers include colleges and universities, private industry, and governmental agencies.

Degree Description

The Edward R. Murrow College of Communication is nationally

and internationally recognized for its excellence in scholarship and close faculty-student interaction. As one of few colleges in the country incorporating communication studies and mass communication, the Murrow Program provides graduate students the opportunity to work closely with faculty from a wide range of disciplines. With multiple nationally-ranked programs of study, The Murrow College's Graduate Program provides students the opportunity to take classes and perform research with leading scholars. Our students consistently present papers at regional, national, and international conferences, and frequently publish articles with faculty.

Post-Graduate Employment Opportunities

Graduates of The Edward R. Murrow College of Communication graduate program are prepared for careers in teaching, research, and public service. Potential employers of program graduates include colleges and universities, private industry, and governmental agencies.

Post-Graduate Career Placements

Associate Professor at University of Arizona, Assistant Professor at Ohio University, Assistant Professor, Virginia Tech, Instruction Design Coordinator, Assistant Professor at Oregon State University, Instructor at City University, Associate Professor at Zhejiang University

Faculty

Erica Austin, Michael Beam, Frederick Busselle, Prabu David, David Demers, Jolanta Drzewiecka, Douglas Hindman, Elizabeth Hindman, Stacey Hust, Parul Jain, E James, Todd Norton, Jeffery Peterson, Bruce Pinkleton, Lawrence Pintak, Michael Salvador, Alexis Tan and Changmin Yan.

COM

- 500 Communication Colloquium 1** May be repeated for credit; cumulative maximum 8 hours. Written and oral presentation of research topics in Communication; college colloquium.
- 501 Theory Building in Communication 3** Relationship of research to theory development; evaluation of current theory and research; planning and executing research within specified theoretical frameworks.
- 502 Consumer Analysis and Brand Development 3** Consumer analysis and brand development; skills to make strategic communication campaigns successful.
- 504 Instructional Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: By interview only.

- 506 Persuasion and Social Influence 3** Theories, concepts strategies and processes of persuasion and social influence.
- 507 Communication Ethics Seminar 3** Topics in communication ethics.
- 509 Quantitative Research 3** Introduction to quantitative research in communication; hypothesis development, testing; basic statistics, interpretation; field surveys, laboratory and field experiments, content analysis.
- 514 Health Communication Theories and Campaigns 3** Health communication theories with a focus on campaign construction and evaluation.
- 516 Health Communication and Society 3 3** Reviews, critiques and applications of research regarding the impact of social and cultural environments on health communication.
- 517 Health Communication and Social Development 3** Explores and tests role of mediated communication in the causes of and solutions for health problems, particularly among young people.
- 521 Foundational Perspectives in Intercultural Communication 3** Overview of three current foundational research perspectives in intercultural communication; functionalist (post-positivist), interpretive and critical.
- 522 Theoretical Perspectives on Intercultural Communication 3** Advanced readings in intercultural communication theory and methods; paradigms in current theorizing.
- 524 Intercultural/International Communication and Social Change 3** Application of communication theory, research and technologies aimed at fostering social change in intercultural and international contexts.
- 526 Current Topics in Intercultural Communication 3** Topics in current intercultural communication research.
- 535 Organizational Communication Theory 3** May be repeated for credit; cumulative maximum 6 hours. Traditional and emerging theories in organizational communication.
- 537 Organization and Society 3** Historical foundations, theoretical developments, contemporary issues and practical implications of communicative processes of organizations within society.
- 540 Risk Communication 3** Research and practice in risk communication.
- 550 Media Processes and Effects: Theory and Practice 3** Physiological, psychological and social effects of media messages and technologies upon individuals and societies.
- 552 Current Issues in Media Processes and Effects 3** Current issues in media processes and effects.
- 561 Multimedia Content Creation 3** Exploration and application of strategies to communicate ideas clearly, concisely, and effectively through multimedia content.
- 562 Crisis Communication in Global Contexts 3** Prepare, plan, and execute crisis communication and management to protect the continuity of an organization's image and mission.
- 563 Ethics for Professionals 3** The understanding, discussion, and application of key theories of individual and institutional ethics; the articulation and defense of ethical reasoning.
- 564 Research Methods for Professionals 3** Understanding the role of research in media and related organizations and its application to organizational decision making through quantitative and qualitative research methods including research design, questionnaire construction, sampling, data collection techniques, and variable measurement.
- 570 Communication Theory 3** Relevant theories and research from mass and interpersonal communication.
- 571 Theoretical Perspectives on Media and Society 3** Theories explaining the social and cultural environments of communication processes emphasizing in mass communication.
- 572 Mass Media, Social Control, and Social Change 3** Study of the forces that influence the media's role as an agent of social control or social change.
- 573 Media and Public Discourse 3** Historical and contemporary concepts, questions and dynamics constituting the role of media and discourse among various publics.
- 580 Topics in Communication 3** May be repeated for credit; cumulative maximum 12 hours. Contemporary, specialized, or technical topics in communication.
- 591 Qualitative Research Methods 3** Historical, textual, and legal methodologies for theory-based evaluative and discourse studies in communication.
- 599 Seminar in Communication 3** May be repeated for credit; cumulative maximum 6 hours. Special topics in rhetoric, communication, and public address.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Communication

Degree offered: Master of Arts in Communication

Faculty working with graduate students: 19

Graduate students: 10

Graduate students receiving assistantships or scholarships: 80%

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: :

Fall: December 31

Requirements

In addition to the core courses (9 credits), students completing the Thesis Option must complete 18 credits of conceptual courses from inside and outside the college, and 4-6 thesis credits. In the final semester of a student's course work or after a student has successfully completed all required graded credit hours in the program, he/she must write and defend a prospectus. The purpose of the prospectus is to provide the student's committee members with a clear description of the proposed thesis to determine the soundness of preparation and conceptualization of the planned thesis. The actual format of the prospectus is developed in consultation with the student's committee chair.

Program Description

The Edward R. Murrow College of Communication's master's and doctorate programs provide flexible study in communication studies in a research-based curriculum. Areas of concentration include media, health and social issues, organizations and culture. Students develop unique programs of study in consultation with lead faculty. Criteria for study are based on individual academic interests. The Murrow College is nationally and internationally recognized for its excellence in scholarship and faculty-student interaction. As one of few colleges in the country that incorporates communication studies and mass communication, the Murrow Program provides graduate students the opportunity to work closely with diverse faculty whose research is far-reaching. Students of The Edward R. Murrow College of Communication will graduate with a thorough understanding of theoretical and practical issues related to their chosen concentration along with opportunities to learn from industry leaders. Graduates are prepared for careers in teaching, research, and public service. Potential employers include colleges and universities, private industry, and governmental agencies.

Degree Description

The M. A. in Communication at Washington State University is designed for individuals seeking higher-level and focused understanding of communication theory, processes and phenomena, whether their intent is to prepare for doctoral-level study in pursuit of an academic career or a communication-related career in business, government, education, research, or the communications industry. Successful completion of the program normally requires two academic years of full time study and results in the granting of the Master of Arts in Communication. Our program centers on:* Media, Health, & Social Issues focuses broadly on relations between media and the issues and problems that face society today, such as health, poverty, and crime. This includes social level analysis of mainstream and alternative media as products of and influences on society; individual level analysis of psy-

chological and physiological processes through which knowledge, attitudes and behaviors are shaped; and the creation of messages related to health and social well-being, as well as how strategic messages campaigns can influence decision making and social development.* Communication, Organizations, & Culture focuses on the role of communication in creating, maintaining and transforming socially collective groups ranging from for-profit businesses and corporations to non-profit community organizations and social movements. Because culture is central to social change and stasis, the study of intercultural communication is an integral scholarly component. Students focus on how meanings surrounding race, gender, ethnicity, and nationality are created and challenged through communicative practices.

Post-Graduate Employment Opportunities

Graduates of The Edward R. Murrow College of Communication graduate program are prepared for careers in teaching, research, and public service. Potential employers of program graduates include colleges and universities, private industry, and governmental agencies.

Post-Graduate Career Placements

Instructor, Southern Illinois University Carbondale; Pursuing doctoral degrees at Michigan State University and Arizona State University; Communication Coordinator in health industry; Doctoral Fellow at University of North Carolina, Chapel Hill; Non-Profit organizations; Account Manager at Consensus Inc.; Professional training coach; Assistant Professor; Assistant Director of Communication WSU Foundation; Event Planning Coordinator at Northwest Harvest; Faculty at La Trobe University; Director of Communication, WSU College of Nursing.

Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18
May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Communication

Degree offered: Master of Arts in Communication - Non Thesis

Faculty working with graduate students: 19

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: December 31

Spring: July 1

Requirements

In addition to the core courses (9 credits), students completing the Non-Thesis Option must complete 27 credits of conceptual courses from inside and outside the college, and 4 credits of Master's Thesis/Examination. Upon completion of the required course work, students will take the written comprehensive examination (6 hours). Upon successful completion of the written exam, the student's committee will schedule an oral examination. The examinations aim at the integration of the student's previous experience and study into consistent, mature understanding and expression suitable for advanced teaching, research, and writing in the chosen area of study.

Program Description

The Edward R. Murrow College of Communication's master's and doctorate programs provide flexible study in communication studies in a research-based curriculum. Areas of concentration include media, health and social issues, organizations and culture. Students develop unique programs of study in consultation with lead faculty. Criteria for study are based on individual academic interests. The Murrow College is nationally and internationally recognized for its excellence in scholarship and faculty-student interaction. As one of few colleges in the country that incorporates communication studies and mass communication, the Murrow Program provides graduate students the opportunity to work closely with diverse faculty whose research is far-reaching. Students of The Edward R. Murrow College of Communication will graduate with a thorough understanding of theoretical and practical issues related to their chosen concentration along with opportunities to learn from industry leaders. Graduates are prepared for careers in teaching, research, and public service. Potential employers include colleges and universities, private industry, and governmental agencies.

Degree Description

The M. A. in Communication at Washington State University is designed for individuals seeking higher-level and focused understanding of communication theory, processes and phenomena, whether their intent is to prepare for doctoral-level study in pursuit of an academic career or a communication-related career in business, government, education, research, or the communications industry. Successful completion of the program normally requires

two academic years of full time study and results in the granting of the Master of Arts in Communication. Our program centers on:* Media, Health, & Social Issues focuses broadly on relations between media and the issues and problems that face society today, such as health, poverty, and crime. This includes social level analysis of mainstream and alternative media as products of and influences on society; individual level analysis of psychological and physiological processes through which knowledge, attitudes and behaviors are shaped; and the creation of messages related to health and social well-being, as well as how strategic messages campaigns are can influence decision making and social development.* Communication, Organizations, & Culture focuses on the role of communication in creating, maintaining and transforming socially collective groups ranging from for-profit businesses and corporations to non-profit community organizations and social movements. Because culture is central to social change and stasis, the study of intercultural communication is an integral scholarly component. Students focus on how meanings surrounding race, gender, ethnicity, and nationality are created and challenged through communicative practices. Thesis and non-thesis options are available in the M. A. program. In general, those interested in pursuing doctoral work choose the thesis option while those planning other career options choose the non-thesis option.

- 580 Topics in Communication 3** May be repeated for credit; cumulative maximum 12 hours. Contemporary, specialized, or technical topics in communication.
- 591 Qualitative Research Methods 3** Historical, textual, and legal methodologies for theory-based evaluative and discourse studies in communication.
- 599 Seminar in Communication 3** May be repeated for credit; cumulative maximum 6 hours. Special topics in rhetoric, communication, and public address.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: By interview only. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18
May be repeated for credit. Course Prerequisite: By interview only. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Computer Engineering

Degree offered: Master of Science in Computer Engineering

Faculty working with graduate students: 36

Graduate students: 9

Graduate students receiving assistantships or scholarships: 11%

Tests required: GRE (Combined), TOEFL

Deadline: Fall: January 10th
Spring: July 1st

Program Description

The School of Electrical Engineering and Computer Science offers an outstanding education, providing first-rate preparation for careers in Electrical Engineering, Computer Engineering and Computer Science. US News and World Report ranks WSU's Electrical Engineering graduate program 68th among nearly 180 PhD granting EE programs in the U.S.

Degree Description

The School of Electrical Engineering and Computer Science offers an outstanding education, providing first-rate preparation for careers in Electrical Engineering, Computer Engineering and Computer Science. US News and World Report ranks WSU's Electrical Engineering graduate program 68th among nearly 180 PhD granting EE programs in the U.S. The program must consist of 30 or more hours of credit including 21 or more hours of coursework for which a grade of A-F is given and nine or more credits of thesis research (EE 700).

Training and Professional Development Opportunities

Computer engineering is a field of study that encompasses the fundamental principles, methods, and modern tools for the design and implementation of computing systems. Advances in technology are yielding smaller and higher-performance computer systems permeating into a wide range of applications, from communication systems to consumer products and common household appliances. The computer engineering program provides a balanced perspective of both hardware and software elements of computing systems, and of their relative design trade-offs and applications. Computer engineering builds upon fundamental courses in mathematics, science, and the engineering disciplines to achieve a sound knowledge foundation and to develop breadth. Laboratory experiences are emphasized to provide students with background on experimental design and simulation techniques. Since core course sequences are completed in the junior year, students are able to pursue their career objectives with opportunities to select from a broad spectrum of elective courses. These include a wide range of computer engineering topics such as hardware design, VLSI design,

embedded systems, computer architecture, networking, and operating systems.

Post-Graduate Employment Opportunities

Research Positions in National Labs, Positions in Teaching EECS, Positions in Industry for EECS, and Technical positions in major leading companies across the country and world.

Post-Graduate Career Placements

Recent Graduates are working at Boeing, Hewlett Packard, Transmarket Group, Microsoft, Expedia, Verizon, Amazon, PNNL, Intel, and SEL

Faculty

Roger Alexander, David Bakken, Benjamin Belzer, Anjan Bose, Shira Broschat, Diane Cook, Zhe Dang, Jose Delgado-Frias, Thomas Fischer, Carl Hauser, Deuk Heo, Lawrence Holder, Scott Hudson, Christopher Hundhausen, Sankar Jayaram, Anantharaman Kalyanaraman, Min Kim, George Larue, Robert Lewis, Chen-Ching Liu, John Miller, Robert Olsen, Mohamed Osman, Partha Pande, Patrick Pedrow, John Ringo, Sandip Roy, Ali Saberi, John Schneider, Behrooz Shirazi, Krishnamoorthy Sivakumar, Wenzhan Song, Anurag Srivastava, Li Tan, Vaithianath Venkatasubramanian and Kung-Chi Wang.

Electrical Engineering

E E

- 501 Linear System Theory 3** Dynamic systems from the state variable approach; observability, controllability, stability, and sensitivity of differential and nondifferential systems.
- 502 Linear Multivariable Control 3** Course Prerequisite: E E 501. Optimal linear feedback control, optimal stochastic observers, LQG/LTR design methodology, modern Wiener-Hopf design, robust controllers.
- 503 Structure, Dynamics and Control of Large-scale Networks 3** Course Prerequisite: E E 501; E E 507. Introduction and development of computational and analytical methods required to characterize large-scale networks.
- 504 Modern Optics 3** Diffraction theory, Fourier transforming and imaging properties of lenses, spatial filtering, holography, temporal and spatial coherence, imaging through random media.
- 505 Nonlinear System Theory 3** Course Prerequisite: E E 501. Overview of nonlinear phenomena, Lyapunov stability, input-output stability, periodic orbits, singular perturbation, differential geometric methods, bifurcations and complex behaviors.

- 507 Random Processes in Engineering 3** Functions of random variables; random sequences; stochastic processes; mean-square stochastic calculus; ergodicity; spectral density; linear transformations, filtering, dynamic systems.
- 508 Estimation Theory for Signal Processing, Communications, and Control 3** Course Prerequisite: E E 501; E E 507. Principles of statistical estimation; LLSE; Kalman filtering; smoothing; prediction; maximum-likelihood and Bayesian estimation.
- 509 Adaptive Control 3** Course Prerequisite: E E 501. Model reference adaptive systems (MRAS), adaptive observers, adaptive control, on-line identification, robustness issues, and self-tuning regulators.
- 511 Protection of Power Systems II 3** Protection of electrical equipment as related to electric power systems with emphasis on digital algorithms.
- 518 Advanced Electromagnetic Theory I 3** Electromagnetic waves, electromagnetic theorems and concepts, solutions to the wave equation in rectangular, cylindrical and spherical coordinates.
- 520 Plasma Engineering 3** Electromagnetics, kinetic theory, and fluid mechanics of plasmas in space, arcs, plasma processing, coronas, and fusion reactors.
- 521 Analysis of Power Systems 3** Concepts and practices of modern power engineering, including steady-state and dynamic analysis, economics and control design.
- 523 Power Systems Stability and Control 3** Dynamic analysis of interconnected electric power system; modeling of synchronous generators, loads and transmission network; small-signal stability and transient stability analysis; dynamic stability controls.
- 524 Advanced Computer Architecture 3** Instruction set architectures, pipelining and super pipelining, instruction level parallelism, superscalar and VLIW processors, cache memory, thread-level parallelism and VLSI.
- 525 Power System Applications of Power Electronics 3** Course Prerequisite: E E 521. Power electronic converters in modern power systems, FACTS devices, HVDC, compensation; microgrids and integration renewable energy resources; modeling and control.
- 527 Antenna Theory and Design 3** Antenna fundamentals, analytical techniques, characteristics and design procedures for selected types of wire, broadband, and aperture antennas.
- 528 Advanced Topics in Electromagnetics 3** May be repeated for credit; cumulative maximum 6 hours. Advanced topics of current interest in wave propagation (electromagnetics, acoustics, or optics).
- 530 Digital Signal Processing II 3** Course Prerequisite: E E 507. Frequency selective digital filtering, least-squares filtering, adaptive filtering, multirate signal processing.
- 535 Numerical Solutions to EM Problems 3** Theory and use of finite-difference time-domain; numeric dispersion; absorbing boundary conditions; scattering; radiation; time-domain vs. frequency-domain.
- 536 Power Systems Economics and Electricity Markets 3** Economic dispatch and optimal power flow; electricity market; short-term load forecasting; electricity price forecasting; price-based unit commitment; arbitrage in electricity markets; market power analysis.
- 545 Data Compression 3** Course Prerequisite: E E 507. Source coding with a fidelity criterion; quantization theory; predictive, transform and subband coding; noiseless source codes.
- 548 Information Theory and Channel Coding 3** Course Prerequisite: E E 507. Information theory; entropy, mutual information, source and channel coding theorems, channel capacity, Gaussian channels; channel coding: block and convolutional codes.
- 551 Data Communication Systems 3** Course Prerequisite: E E 507. Digital communications; multi-amplitude/phase signal constellations; probability of error performance; cutoff rate; Viterbi algorithm; trellis coded modulation.
- 555 Computer Communication Networks 3** Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 562 Fault Tolerant Computer Systems 3** Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 571 Advanced Wireless Integrated Circuits and Systems 3** Analysis and design methodologies of state-of-the-art wireless integrated circuits and systems.
- 576 Analog Integrated Circuits 3** Analysis and design of analog integrated circuits in CMOS and BiCMOS technologies; current mirrors, gain stages, operational amplifiers, frequency response, and compensation.
- 581 Advanced Topics in Power Systems V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: E E 521. Power system operations including AGC, economic dispatch and security; power system dynamics; intelligent systems applications.
- 582 Advanced Topics V 1-3** May be repeated for credit.
- 586 VLSI Systems Design 3** VLSI models, layout algorithms, design methodologies, simulation and layout tools, algorithm design for VLSI implementation.
- 587 System on Chip (SoC) Design and Test 3** System on Chip (SoC) and sub-micron integrated circuit design and testing.
- 595 Directed Study in Electrical Engineering V 1 (0-3) to 3 (0-9)** May be repeated for credit. Current topics in electrical engineering.
- 596 Advanced Analog Integrated Circuits 3** MOS and BiCMOS technologies; MOS and BiCMOS operational amplifiers; A/D, D/A converters; switched-capacitor filters; continuous-time filters.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Computer Engineering

Degree offered: Master of Science in Computer Engineering – Non Thesis

Faculty working with graduate students: 36

Graduate students: 5

Tests required: GRE (Combined), TOEFL

Deadline: Fall: January 10th
Spring: July 1st

Program Description

The School of Electrical Engineering and Computer Science offers an outstanding education, providing first-rate preparation for careers in Electrical Engineering, Computer Engineering and Computer Science. US News and World Report ranks WSU's Electrical Engineering graduate program 68th among nearly 180 PhD granting EE programs in the U.S.

Degree Description

The School of Electrical Engineering and Computer Science offers an outstanding education, providing first-rate preparation for careers in Electrical Engineering, Computer Engineering and Computer Science. US News and World Report ranks WSU's Electrical Engineering graduate program 68th among nearly 180 PhD granting EE programs in the U.S. Under the non-thesis option, the student is required to take at least 28 credits of graduate level course work (non P/F and non S/F) plus two credits of EE 702. Of the 30 credits of course work, at least 18 must be in Electrical Engineering and must satisfy the program requirements

Faculty

Roger Alexander, David Bakken, Benjamin Belzer, Anjan Bose, Shira Broschat, Diane Cook, Zhe Dang, Jose Delgado-Frias, Thomas Fischer, Carl Hauser, Deuk Heo, Lawrence Holder, Scott Hudson, Christopher Hundhausen, Sankar Jayaram, Anantharaman Kalyanaraman, Min Kim, George Larue, Robert Lewis, Chen-Ching Liu, John Miller, Robert Olsen, Mohamed Osman, Partha Pande, Patrick Pedrow, John Ringo, Sandip Roy, Ali Saberi, John Schneider, Behrooz Shirazi, Krishnamoorthy Sivakumar, Wenzhan Song, Anurag Srivastava, Li Tan, Vaithianath Venkatasubramanian and Kung-Chi Wang.

Electrical Engineering

E E

- 501 Linear System Theory 3** Dynamic systems from the state variable approach; observability, controllability, stability, and sensitivity of differential and nondifferential systems.
- 502 Linear Multivariable Control 3** Course Prerequisite: E E 501. Optimal linear feedback control, optimal stochastic observers, LQG/LTR design methodology, modern Wiener-Hopf design, robust controllers.
- 503 Structure, Dynamics and Control of Large-scale Networks 3** Course Prerequisite: E E 501; E E 507. Introduction and development of computational and analytical methods required to characterize large-scale networks.
- 504 Modern Optics 3** Diffraction theory, Fourier transforming and imaging properties of lenses, spatial filtering, holography, temporal and spatial coherence, imaging through random media.
- 505 Nonlinear System Theory 3** Course Prerequisite: E E 501. Overview of nonlinear phenomena, Lyapunov stability, input-output stability, periodic orbits, singular perturbation, differential geometric methods, bifurcations and complex behaviors.
- 507 Random Processes in Engineering 3** Functions of random variables; random sequences; stochastic processes; mean-square stochastic calculus; ergodicity; spectral density; linear transformations, filtering, dynamic systems.
- 508 Estimation Theory for Signal Processing, Communications, and Control 3** Course Prerequisite: E E 501; E E 507. Principles of statistical estimation; LLSE; Kalman filtering; smoothing; prediction; maximum-likelihood and Bayesian estimation.
- 509 Adaptive Control 3** Course Prerequisite: E E 501. Model reference adaptive systems (MRAS), adaptive observers, adaptive control, on-line identification, robustness issues, and self-tuning regulators.
- 511 Protection of Power Systems II 3** Protection of electrical equipment as related to electric power systems with emphasis on digital algorithms.

- 518 Advanced Electromagnetic Theory I** 3 Electromagnetic waves, electromagnetic theorems and concepts, solutions to the wave equation in rectangular, cylindrical and spherical coordinates.
- 520 Plasma Engineering** 3 Electromagnetics, kinetic theory, and fluid mechanics of plasmas in space, arcs, plasma processing, coronas, and fusion reactors.
- 521 Analysis of Power Systems** 3 Concepts and practices of modern power engineering, including steady-state and dynamic analysis, economics and control design.
- 523 Power Systems Stability and Control** 3 Dynamic analysis of interconnected electric power system; modeling of synchronous generators, loads and transmission network; small-signal stability and transient stability analysis; dynamic stability controls.
- 524 Advanced Computer Architecture** 3 Instruction set architectures, pipelining and super pipelining, instruction level parallelism, superscalar and VLIW processors, cache memory, thread-level parallelism and VLSI.
- 525 Power System Applications of Power Electronics** 3 Course Prerequisite: E E 521. Power electronic converters in modern power systems, FACTS devices, HVDC, compensation; microgrids and integration renewable energy resources; modeling and control.
- 527 Antenna Theory and Design** 3 Antenna fundamentals, analytical techniques, characteristics and design procedures for selected types of wire, broadband, and aperture antennas.
- 528 Advanced Topics in Electromagnetics** 3 May be repeated for credit; cumulative maximum 6 hours. Advanced topics of current interest in wave propagation (electromagnetics, acoustics, or optics).
- 530 Digital Signal Processing II** 3 Course Prerequisite: E E 507. Frequency selective digital filtering, least-squares filtering, adaptive filtering, multirate signal processing.
- 535 Numerical Solutions to EM Problems** 3 Theory and use of finite-difference time-domain; numeric dispersion; absorbing boundary conditions; scattering; radiation; time-domain vs. frequency-domain.
- 536 Power Systems Economics and Electricity Markets** 3 Economic dispatch and optimal power flow; electricity market; short-term load forecasting; electricity price forecasting; price-based unit commitment; arbitrage in electricity markets; market power analysis.
- 545 Data Compression** 3 Course Prerequisite: E E 507. Source coding with a fidelity criterion; quantization theory; predictive, transform and subband coding; noiseless source codes.
- 548 Information Theory and Channel Coding** 3 Course Prerequisite: E E 507. Information theory; entropy, mutual information, source and channel coding theorems, channel capacity, Gaussian channels; channel coding: block and convolutional codes.
- 551 Data Communication Systems** 3 Course Prerequisite: E E 507. Digital communications; multi-amplitude/phase signal constellations; probability of error performance; cutoff rate; Viterbi algorithm; trellis coded modulation.
- 555 Computer Communication Networks** 3 Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 562 Fault Tolerant Computer Systems** 3 Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 571 Advanced Wireless Integrated Circuits and Systems** 3 Analysis and design methodologies of state-of-the-art wireless integrated circuits and systems.
- 576 Analog Integrated Circuits** 3 Analysis and design of analog integrated circuits in CMOS and BiCMOS technologies; current mirrors, gain stages, operational amplifiers, frequency response, and compensation.
- 581 Advanced Topics in Power Systems** V 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: E E 521. Power system operations including AGC, economic dispatch and security; power system dynamics; intelligent systems applications.
- 582 Advanced Topics** V 1-3 May be repeated for credit.
- 586 VLSI Systems Design** 3 VLSI models, layout algorithms, design methodologies, simulation and layout tools, algorithm design for VLSI implementation.
- 587 System on Chip (SoC) Design and Test** 3 System on Chip (SoC) and sub-micron integrated circuit design and testing.
- 595 Directed Study in Electrical Engineering** V 1 (0-3) to 3 (0-9) May be repeated for credit. Current topics in electrical engineering.
- 596 Advanced Analog Integrated Circuits** 3 MOS and BiCMOS technologies; MOS and BiCMOS operational amplifiers; A/D, D/A converters; switched-capacitor filters; continuous-time filters.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18
May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Computer Science

Degree offered: Doctor of Philosophy (Computer Science)

Faculty working with graduate students: 36

Graduate students: 44

Graduate students receiving assistantships or scholarships: 90%

Tests required: GRE (Combined), TOEFL

Deadline: Fall: January 10th
Spring: July 1st

Requirements

Minimum of [1 accepted journal paper] OR [2 accepted peer-reviewed conference papers AND a journal submission] (the publication venues (journal or conference))

Program Description

As the largest unit within this College, the School of Electrical Engineering and Computer Science is instrumental in determining competencies and preparing students at all levels (B.S., M.S., and Ph.D.) for technological productivity. The success of our graduate students in industry and higher education reflects the excellence of the School of EECS and its programs. In industry, our graduate degree holders are presidents, CEOs, CIOs, vice presidents, directors, and division and department managers. Some have founded at least one company and initiated and promoted new technologies, operations and sales strategies. Others have excelled as senior designers, project managers, senior scientists, and lead engineers. In higher education, they are professors, deans, and research directors. Graduate degrees have enriched their lives and careers, while affecting positively the economy of the state and nation. All are excellent role models for their peers and our students.

Degree Description

As the largest unit within this College, the School of Electrical Engineering and Computer Science is instrumental in determining competencies and preparing students at all levels (B.S., M.S., and Ph.D.) for technological productivity. The success of our graduate students in industry and higher education reflects the excellence of the School of EECS and its programs. In industry, our graduate degree holders are presidents, CEOs, CIOs, vice presidents, directors, and division and department managers. Some have founded at least one company and initiated and promoted new technologies, operations and sales strategies. Others have excelled as senior designers, project managers, senior scientists, and lead engineers. In higher education, they are professors, deans, and research directors. Graduate degrees have enriched their lives and careers, while affecting positively the economy of the state and nation. All are excellent role

models for their peers and our students. The program of study should consist of approximately 35 credits of graded course work plus 30 or more research credits (Cpt S 800). A maximum of 6 credits of Directed Study (CptS 595) may be included. A maximum of 9 credits of 400 level graded course work approved by the EECS GSC may be included. In general, undergraduate courses REQUIRED for the BS/CS, BS/EE or BA/CS and undergraduate courses listed as pre-requisite for admission into the MS/PhD in CPT SCI program will NOT BE allowed.

Training and Professional Development Opportunities

Research positions in National Laboratories, positions in teaching, positions at top companies across the country.

Post-Graduate Employment Opportunities

In industry, our graduate degree holders are presidents, CEOs, CIOs, vice presidents, directors, and division and department managers. Some have founded at least one company and initiated and promoted new technologies, operations and sales strategies. Others have excelled as senior designers, project managers, senior scientists, and lead engineers. In higher education, they are professors, deans, and research directors.

Post-Graduate Career Placements

Western Digital, Telecom, Hewlett Packard, PNNL, SEL, WSUPJM Interconnection, LLC, Transmarket Group, Microsoft, Intel, Carnegie Institution for Sci. California ISO, Expedia, Verizon and Amazon

Faculty

Roger Alexander, David Bakken, Benjamin Belzer, Anjan Bose, Shira Broschat, Diane Cook, Zhe Dang, Jose Delgado-Frias, Thomas Fischer, Carl Hauser, Deuk Heo, Lawrence Holder, Scott Hudson, Christopher Hundhausen, Sankar Jayaram, Anantharaman Kalyanaraman, Min Kim, George Larue, Robert Lewis, Chen-Ching Liu, John Miller, Robert Olsen, Mohamed Osman, Partha Pande, Patrick Pedrow, John Ringo, Sandip Roy, Ali Saberi, John Schneider, Behrooz Shirazi, Krishnamoorthy Sivakumar, Wenzhan Song, Anurag Srivastava, Li Tan, Vaithianath Venkatasubramanian and Kung-Chi Wang.

CPT S

- 500 Proseminar 1** Faculty research interests, departmental computer systems, computer science research, report preparation.
- 516 Algorithmics 3** Discrete structures, automata, formal languages, recursive functions, algorithms, and computability.

- 527 Computer Security 3** Computer security concepts, models and mechanism; encryption technology, formal models, policy and ethical implications. Credit not granted for both CPT S 427 and CPT S 527.
- 530 Numerical Analysis 3** Fundamentals of numerical computation; finding zeroes of functions, approximation and interpolation; numerical integration (quadrature); numerical solution of ordinary differential equations. (Cross-listed course offered as MATH 448, CPT S 430, CPT S 530). Required preparation must include differential equations and a programming course.
- 531 Advanced Matrix Computations 3** Advanced topics in the solution of linear systems and eigenvalue problems, including parallel matrix computations. (Cross-listed course offered as MATH 544, CPT S 531). Required preparation must include numerical analysis. Required preparation must include numerical analysis.
- 534 Neural Network Design and Application 3** Hands-on experience with neural network modeling of nonlinear phenomena; application to classification, forecasting, identification and control. Credit not granted for both CPT S 434 and CPT S 534.
- 538 Scientific Visualization 3** Data taxonomy; sampling; plotting; using and extending a visualization package; designing visualizations; domain-specific techniques.
- 540 Artificial Intelligence 3** An introduction to the field of artificial intelligence including heuristic search, knowledge representation, deduction, uncertainty reasoning, learning, and symbolic programming languages. Credit not granted for both CPT S 440 and CPT S 540.
- 542 Computer Graphics 3** Raster operations; transformations and viewing; geometric modeling; visibility and shading; color. Credit not granted for both CPT S 442 and CPT S 542.
- 543 Human-Computer Interaction 3** Concepts and methodologies of engineering, social and behavioral sciences to address ergonomic, cognitive, social and cultural factors in the design and evaluation of human-computer systems. Credit not granted for both CPT S 443 and CPT S 543.
- 548 Advanced Computer Graphics 3** Solid modeling, visual realism, light and color models, advanced surface generation techniques.
- 550 Parallel Computation 3** Parallel machine models, principles for the design of parallel algorithms, interconnection networks, systolic arrays, computational aspects to VLSI. Required preparation must include differential equations and a programming course.
- 553 Graph Theory 3** Graphs and their applications, directed graphs, trees, networks, Eulerian and Hamiltonian paths, matrix representations, construction of algorithms. (Cross-listed course offered as MATH 453, CPT S 453). Required preparation must include linear algebra. Required preparation must include linear algebra.
- 555 Computer Communication Networks 3** Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 557 Advanced Computer Networks 3** ATM networks, optical WDM networks, and wireless/mobile networks; access, transport, and routing protocols.
- 560 Operating Systems 3** Structure of multiprogramming and multiprocessing; efficient allocation of systems resources; design implementation and performance measurement.
- 561 Computer Architecture 3** Parallel and distributed processors; multiprocessors; interconnection topologies; language-directed architecture; special-purpose architecture.
- 562 Fault Tolerant Computer Systems 3** Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 564 Distributed Systems Concepts and Programming 3** Concepts of distributed systems; naming, security, networking, replication, synchronization, quality of service; programming middleware. Credit not granted for both CPT S 464 and CPT S 564.
- 566 Embedded Systems 3 (2-3)** The design and development of real-time and dedicated software systems with an introduction to sensors and actuators. Credit not granted for both CPT S 466 and CPT S 566.
- 570 Machine Learning 3** Introduction to building computer systems that learn from their experience; classification and regression problems; unsupervised and reinforcement learning.
- 571 Computational Genomics 3** Fundamental algorithms, techniques and applications. Credit not granted for both CPT S 471 and CPT S 571.
- 572 Numerical Methods in Computational Biology 3** Computational methods for solving scientific problems related to information processing in biological systems at the molecular and cellular levels.
- 573 Bioinformatics Software Development 3** Provides programming skills needed to address current computational problems in bioinformatics; emphasis on mathematical development and software design.
- 580 Advanced Topics in Computer Science 3** May be repeated for credit.
- 595 Directed Study in Computer Science V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 6 hours. Current topics in computer science.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

CPT S

- 500 Proseminar 1** Faculty research interests, departmental computer systems, computer science research, report preparation.
- 516 Algorithmics 3** Discrete structures, automata, formal languages, recursive functions, algorithms, and computability.
- 527 Computer Security 3** Computer security concepts, models and mechanism; encryption technology, formal models, policy and ethical implications. Credit not granted for both CPT S 427 and CPT S 527.
- 530 Numerical Analysis 3** Fundamentals of numerical computation; finding zeroes of functions, approximation and interpolation; numerical integration (quadrature); numerical solution of ordinary differential equations. (Cross-listed course offered as MATH 448, CPT S 430, CPT S 530). Required preparation must include differential equations and a programming course.

- 531 Advanced Matrix Computations 3** Advanced topics in the solution of linear systems and eigenvalue problems, including parallel matrix computations. (Cross-listed course offered as MATH 544, CPT S 531). Required preparation must include numerical analysis. Required preparation must include numerical analysis.
- 534 Neural Network Design and Application 3** Hands-on experience with neural network modeling of nonlinear phenomena; application to classification, forecasting, identification and control. Credit not granted for both CPT S 434 and CPT S 534.
- 538 Scientific Visualization 3** Data taxonomy; sampling; plotting; using and extending a visualization package; designing visualizations; domain-specific techniques.
- 540 Artificial Intelligence 3** An introduction to the field of artificial intelligence including heuristic search, knowledge representation, deduction, uncertainty reasoning, learning, and symbolic programming languages. Credit not granted for both CPT S 440 and CPT S 540.
- 542 Computer Graphics 3** Raster operations; transformations and viewing; geometric modeling; visibility and shading; color. Credit not granted for both CPT S 442 and CPT S 542.
- 543 Human-Computer Interaction 3** Concepts and methodologies of engineering, social and behavioral sciences to address ergonomic, cognitive, social and cultural factors in the design and evaluation of human-computer systems. Credit not granted for both CPT S 443 and CPT S 543.
- 548 Advanced Computer Graphics 3** Solid modeling, visual realism, light and color models, advanced surface generation techniques.
- 550 Parallel Computation 3** Parallel machine models, principles for the design of parallel algorithms, interconnection networks, systolic arrays, computational aspects to VLSI. Required preparation must include differential equations and a programming course.
- 553 Graph Theory 3** Graphs and their applications, directed graphs, trees, networks, Eulerian and Hamiltonian paths, matrix representations, construction of algorithms. (Cross-listed course offered as MATH 453, CPT S 453). Required preparation must include linear algebra. Required preparation must include linear algebra.
- 555 Computer Communication Networks 3** Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 557 Advanced Computer Networks 3** ATM networks, optical WDM networks, and wireless/mobile networks; access, transport, and routing protocols.
- 560 Operating Systems 3** Structure of multiprogramming and multiprocessing; efficient allocation of systems resources; design implementation and performance measurement.
- 561 Computer Architecture 3** Parallel and distributed processors; multiprocessors; interconnection topologies; language-directed architecture; special-purpose architecture.
- 562 Fault Tolerant Computer Systems 3** Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 564 Distributed Systems Concepts and Programming 3** Concepts of distributed systems; naming, security, networking, replication, synchronization, quality of service; programming middleware. Credit not granted for both CPT S 464 and CPT S 564.
- 566 Embedded Systems 3 (2-3)** The design and development of real-time and dedicated software systems with an introduction to sensors and actuators. Credit not granted for both CPT S 466 and CPT S 566.
- 570 Machine Learning 3** Introduction to building computer systems that learn from their experience; classification and regression problems; unsupervised and reinforcement learning.
- 571 Computational Genomics 3** Fundamental algorithms, techniques and applications. Credit not granted for both CPT S 471 and CPT S 571.
- 572 Numerical Methods in Computational Biology 3** Computational methods for solving scientific problems related to information processing in biological systems at the molecular and cellular levels.
- 573 Bioinformatics Software Development 3** Provides programming skills needed to address current computational problems in bioinformatics; emphasis on mathematical development and software design.
- 580 Advanced Topics in Computer Science 3** May be repeated for credit.
- 595 Directed Study in Computer Science V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 6 hours. Current topics in computer science.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18
May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Computer Science – Vancouver

Degree offered: Master of Science in Computer Science

Faculty working with graduate students: 7

Graduate students: 12

Graduate students receiving assistantships or scholarships: 41%

Program offered: Vancouver

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10
Spring: July 1

Requirements

Students also must complete nine credit hours of CS 700 Master's Research and Examination. Two CS 700 credits must be taken in the semester during which the student intends to defend the thesis.

Program Description

The Master of Science in Computer Science program in the School of ENCS is a thesis program and requires 30 credit hours, including 21 hours of graded course work and 9 credits of thesis research (CS 700). The coursework and research are in the general areas of software engineering, artificial intelligence, computer networks and computer graphics. Sophisticated facilities are available for instruction and research. Teaching and research assistantships are available for qualified students. Before undertaking graduate study in computer science, the student should have completed a baccalaureate degree substantially similar to the BSCS degree described below in the BSCS schedule of studies. Students from other academic disciplines are encouraged to apply, however such students will be required to take or have taken the equivalent of the following courses: CS 317, CS 360 and CS 450, including all prerequisites for these courses. An undergraduate grade point average of 3.0 is a minimum for admission to the MS program.

Degree Description

The Master of Science in Computer Science program in the School of ENCS is a thesis program and requires 30 credit hours, including 21 hours of graded course work and 9 credits of thesis research (CS 700). The coursework and research are in the general areas of software engineering, artificial intelligence, computer networks and computer graphics. Sophisticated facilities are available for instruction and research. Teaching and research assistantships are available for qualified students. Before undertaking graduate study in computer science, the student should have completed a baccalaureate degree substantially similar to the BSCS degree described below in the BSCS schedule of studies. Students from other academic disciplines are encouraged

to apply, however such students will be required to take or have taken the equivalent of the following courses: CS 317, CS 360 and CS 450, including all prerequisites for these courses. An undergraduate grade point average of 3.0 is a minimum for admission to the MS program. The WSU Vancouver MS in Computer Science is designed and administered separately from the MS program in Pullman. If you designate the WSU Pullman program as your main objective, you will not be automatically considered by the Vancouver program unless you submit the specific documentation requested on our "How to Apply" web page (<http://encs.vancouver.wsu.edu/how-apply>). Except in rare cases, only those who indicate WSU Vancouver as their main objective will be prompted to submit any missing documentation so our Selection Committee can review their completed applications.

Faculty

David Chiu, Wayne Cochran, Thanh Dang, Charles Lang, Sarah Mocas, Scott Wallace and Xinghui Zhao.

Computer Science – Vancouver

CS

- 425 Digital Forensics** 3 Course Prerequisite: CS 360 with a C or better. Use of computers in the investigation of criminal and civil incidents in which computers or computer technology play a significant or interesting role.
- 427 Computer Security** 3 Course Prerequisite: CS 216 with a C or better; CS 360 with a C or better. Computer security concepts, models and mechanism; encryption technology, formal models, policy and ethical implications. Credit not granted for both CS 427 and CS 527.
- 440 Artificial Intelligence** 3 Course Prerequisite: CS 320 with a C or better; STAT 360 with a C or better or MATH 212 with a C or better. Knowledge representation and automated problem solving; theory and application of agent programming.
- 442 Computer Graphics** 3 Course Prerequisite: CS 223 with a C or better; CS 320 with a C or better; MATH 220 with a C or better. Raster operations; transformations and viewing; geometric modeling; visibility and shading; color. Credit not granted for both CS 442 and CS 542.
- 443 Human-Computer Interaction** 3 Course Prerequisite: Junior standing. Introduction to the field of human-computer interaction; understanding the system user; user-centered design and evaluation techniques including heuristic evaluation and usability testing.
- 447 Computer Game Design** 3 Course Prerequisite: CS 223 with a C or better; CS 320 with a C or better. Design and implementation of computer games. Credit not granted for both CS 447 and CS 547.

- 452 Compiler Design 3** Course Prerequisite: CS 317 with a C or better; CS 355 with a C or better. Design of lexical analyzers, syntactic analyzers, intermediate code generators, code optimizers and object code generators.
- 453 Web Data Management 3** Course Prerequisite: CS 351 with a C or better. Introduction of concepts, data models, query and retrieval languages; implementation issues for management of web data.
- 466 Embedded Systems 3 (2-3)** Course Prerequisite: CS 360 with a C or better, or ECE 370 with a C or better; senior standing. Design and development of real-time and dedicated software systems with an introduction to sensors and actuators. Credit not granted for both CS 466 and CS 566.
- 516 Theory of Computation 3** Discrete structures, automata, formal languages, recursive functions, algorithms, computability, and complexity. Required preparation must include a strong background in discrete mathematics, automata, and formal languages.
- 518 Advanced Analysis of Algorithms 3** Advanced Study in design and analysis of algorithms, including randomized and approximation algorithms, linear programming, network flow and string matching.
- 521 Software Engineering Analysis 3** Research in software engineering; application of quantitative techniques in the software life cycle; current software engineering literature; exploration of techniques of mathematical modeling and solutions to software engineering problems. Required preparation must include a familiarity with the use and theory behind current software engineering practices.
- 527 Computer Security 3** Computer security concepts, models and mechanism; encryption technology, formal models, policy and ethical implications. Credit not granted for both CS 427 and CS 527.
- 541 Artificial Intelligence 3** Intelligent computer programs; simulation of cognitive processes. Required preparation must include prior knowledge and experience in artificial intelligence.
- 542 Computer Graphics 3** Raster operations; transformations and viewing; geometric modeling; visibility and shading; color. Credit not granted for both CS 442 and CS 542.
- 547 Computer Game Design 3** Design and implementation of computer games. Credit not granted for both CS 447 and CS 547.
- 548 Advanced Computer Graphics 3** Solid modeling, visual realism, light and color models, advanced surface generation techniques. Required preparation must include a prior knowledge and understanding of linear algebra and the graphics pipeline.
- 558 Wireless Sensor Networks 3** Design and implementation of sensor networks. Required preparation must include a prior knowledge and understanding of communication protocols such as TCP/IP and experience in network programming.
- 566 Embedded Systems 3 (2-3)** Design and development of real-time and dedicated software systems with an introduction to sensors and actuators. Credit not granted for both CS 466 and CS 566.

- 570 Machine Learning 3** Introduction to building computer systems that learn from their experience; classification and regression problems; unsupervised and reinforcement learning.
- 580 Advanced Topics in Computer Science 3** May be repeated for credit.
- 595 Directed Study in Computer Science V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 3 hours. Current topics in computer science.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

Constraints Management – Cert in Constraints Management

Degree offered: Graduate Certificate in Constraints Management

Graduate students: 15

Program offered: DDP

Deadline: Fall: January 10
Spring: July 1
Summer: Default

Requirements

Students must apply for the certificate and pay the required fee, the first half of the final semester.

Program Description

The ETM Certificate Program allows students to complete shorter professional blocks of coursework relevant to their specific needs. Rather than completing all the course requirements for an ETM master's degree, students may take four courses (12-credit hours) in specialized areas. A certificate is awarded upon completion of these courses. Course credits earned for a certificate may also apply to a master's degree in the ETM Program or other graduate degree programs. A student may earn more than one certificate and may work on the certificate and master's program concurrently.

Degree Description

The Theory of Constraints (TOC) certificate focuses on the management of the limiting factors of any system. By providing specific methods of managing variability, TOC creates exceptional performance very quickly and then encourages a process on an on-going improvement through the focused use of LEAN and Six Sigma tools. The TOC methods apply to every level of the organization and at every level of maturity. As a result, using TOC over time results in a stable and ever improving organization. This certificate teaches the TOC proven solutions and the TOC thinking process for new solutions. It includes managing people, processes, projects, finances, and strategy for a company. Students with this certificate have become Technical Fellows at Boeing, senior managers at many companies, CEOs of technical companies, program leads, research directors, and independent

consultants. Students taking this certificate in the past include engineers, medical doctors, judges, cost analyst, rocket scientist, cabinet makers, professors, and consultants.

Training and Professional Development Opportunities

The Constraints Management Certificate prepares student for the TOC Certification Exams in Supply Chain Logistics, Project Management, TOC Thinking Process and Business Strategy exam given by the Theory of Constraints International Certification Organization. Students with the Constraints Management Certificate are effective 'change agents' who can lead rapid improvement efforts and stabilize organizations. This talent applies with internal and external consulting as well as management positions. They can implement the TOC solutions which are highly effective. There is a growing demand for Critical Chain Project Managers as well as TOC experts in Production and Distribution. Students with this certificate became Technical Fellows at Boeing, Senior Managers at many companies, CEO of technical companies, Program Leads, Research Directors and independent consultants. Students taking this certificate in the past included medical doctors, judges, cost analyst, rocket scientist, cabinet makers, Professors and consultants

Engineering Management

E M

- 501 Management of Organizations 3** Exploration of issues related to individual behavior in work organizations, including motivation, leadership, team-building, and team management skills.
- 505 Finance for Technical Systems 3** Time value of money, capital budgeting, accounting principles, cost, valuation, risk, cost accounting and sensitivity analyses: concepts for engineering decision-making.
- 508 Legal Concepts for Engineering and Technical Managers 3** Basic legal obligations of engineering/technical managers; identify, minimize and recognize risks and liability; contemporary legal environment and business law.
- 520 Construction Project Management 3** Construction project bids, proposals, contracts, project delivery/organization; estimating, scheduling, resource loading, project monitoring and controls, safety and quality
- 522 Supervision and Leadership for Engineering and Technology Managers 3** Strategies of supervision with practical application techniques presented to create individual and organizational motivation.
- 526 Constraints Management 3** Identifies factors that block improvements in any system; effective breakthrough solutions; continual systems improvements for manufacturing, administration, projects. Credit not granted for both E M 426 and E M 526.
- 530 Applications of Constraints Management 3** Understanding and applying proved solutions developed by the theory of constraints in areas of production, project management, finance, and distribution. Credit not granted for both E M 430 and E M 530.
- 534 Contemporary Topics in Constraints Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: E M 526 or 530. Contemporary teaching tools, software packages, current techniques and thought in managing complex systems using the theory of constraints.
- 538 Lean Agility 3** Integration of the best of Lean, Six Sigma, and Theory of Constraints to accelerate the continuous improvement process.
- 540 Operations Research for Managers 3** Applying linear, integer, goal programming; network optimization; queuing analysis; dynamic programming; simulation; Markov analysis; and forecasting to engineering management decisions.
- 545 Technical Decision Analysis 3** Decision analysis provides a structured discipline for describing, analyzing, and finalizing decisions involving uncertainty. Recommended preparation: Basic STAT course.
- 555 Enterprise Resource Management 3** Focusing the flow of quality, timely products and cooperative supply chain operations and planning using simulation and effective enterprise resource management.
- 560 Integrated Supply Chain Management 3** How technical managers analyze and manage the flow of materials, services, and information for products from inception to final customer.
- 564 Project Management 3** Technical tools, Critical Path Method (CPM), Program Evaluation Review Technique (PERT), cost/schedule control systems, behavioral issues and organizational structure. Credit not granted for both E M 464 and E M 564.
- 565 Introduction to Systems Management 3** Design manufacture, operation of complex system development for engineering managers; project planning, organizing, and controlling tools for engineering system constraints.
- 566 System Engineering Analysis and Practice 3** Problem-solving methodologies based on system concepts and design applications for complex, large-scale technical systems pertinent to program managers.
- 567 System Supportability and Logistics Management 3** Supportability and logistics engineering and management in a system life cycle, from concept to retirement.
- 570 Six Sigma Quality Management 3** Graduate-level counterpart of E M 470; additional requirements.
- 575 Performance Management in Technical Organizations 3** Management of high technology organizations; planning, measurement, and human factors in improving high technology organizations; productivity, motivation and performance systems.

- 580 Quality Control and Reliability 3** Quality analysis, modeling process, product quality, statistical process control, process capability studies; sampling concepts, reality models, predictions, design testing. Credit not granted for both E M 480 and E M 580. Recommended preparation: STAT 430.
- 585 Quality Improvement Using Design of Experiments 3** Design for quality improved products; processes and services using designed experiments, including robust/parameter design. Credit not granted for both E M 485 and E M 585. Recommended preparation: Undergraduate statistics.
- 590 Design for Product and Service Realization 3** Techniques and tools to optimize cost, quality, time to market, and to improve comprehensive product design, manufacturability and service components. Credit not granted for both E M 490 and E M 590.
- 591 Strategic Management of Technology and Innovations in Engineering 3** Management of technological innovation; integrating strategy, new product development, corporate entrepreneurship, and innovation; features action-oriented cases.
- 595 Advanced Topics in Engineering Management I V 1-3** May be repeated for credit; cumulative maximum 9 hours. A wide range of current high-interest engineering management topics.
- 596 Advanced Topics in Engineering Management II 3** May be repeated for credit; cumulative maximum 9 hours. A wide range of current high-interest engineering management topics.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Construction Project Management – Cert in Construction Project Mgmt.

Degree offered: Graduate Certificate in Construction Project Management

Graduate students: 5

Program offered: DDP

Deadline: Fall: July 15 (January 10 international)
 Spring: November 15 (July 1 international)
 Summer: April 1 (Default international)

Requirements

Student must apply for graduation with the certificate the final

semester according to graduate school deadlines. Only one certificate in either Project Management or Construction Project Management will be awarded.

Program Description

The ETM Certificate Program allows students to complete shorter professional blocks of coursework relevant to their specific needs. Rather than completing all the course requirements for an ETM master's degree, students may take four courses (12-credit hours) in specialized areas. A certificate is awarded upon completion of these courses. Course credits earned for a certificate may also apply to a master's degree in the ETM Program or other graduate degree programs. A student may earn more than one certificate and may work on the certificate and master's program concurrently. Eight certificates are available in the Master of Engineering and Technology Management degree program.

Degree Description

It is necessary for construction project managers to update their skills in modern project management techniques, to effectively contribute to the continuing growth of the industry. The increasing complexity of construction projects requires the manager to know and understand many different facets in order to become/remains proficient in the field. The CPM certificate provides the recipients with the skills to manage any type of project (not only construction) involving contractors and subcontractors. Many professionals have reported that this certificate has allowed them to advance in their careers as a project manager and as a technology manager.

Training and Professional Development Opportunities

Graduates should be able to: *Apply the principles of project management to successfully manage projects involving on-site construction and shop fabrication. *Manage projects as a representative of an owner or agent, a general contractor or subcontractor, in a commercial or government contracting environment. *Have an understanding of how to learn, analyze, and apply new/evolving techniques of project management in the future.

Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Counseling

Degree offered: Master of Arts in Education

Faculty working with graduate students: 10

Graduate students: 1

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

The curriculum for Community Counseling program includes course work in theory, research, and techniques in individual and group counseling; vocational/career counseling and assessment; professional and ethical issues; life-span development; counseling diverse populations; statistics, measurement, and research design. Students in the Community Counseling program take additional coursework in personality assessment, diagnosis and psychopathology, and two semesters of internship in community mental health settings. Additional courses are available on an elective basis, including courses on hypnosis, counselor supervision, substance abuse counseling, Chicano/Latino psychology, cross-cultural counseling research, social psychology, and program evaluation.

Program Description

The counseling psychology program offers a Ph.D. degree and a Master of Arts degree available at the Pullman campus. The Ph.D. in counseling psychology program prepares students for careers in counseling, teaching, research, and other professional roles as counseling psychologists. For example, graduates obtain positions in university counseling centers, academic faculty in counseling psychology departments, private or group practice in psychology, or other mental health settings as therapists. Graduates of the program are license-eligible in most states. The Ph.D. program has been accredited by the American Psychological Association (APA) since 1990. The M.A. program with emphasis in community counseling, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students in either program can pursue the Master of Arts (M.A.) degree, with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although M.A. graduates without thesis also apply for and enter doctoral programs.

Degree Description

Master's degrees in counseling focus on community counseling, which, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students can pursue the Master of Arts (M.A.) degree,

with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although M.A. graduates without thesis also apply for and enter doctoral programs.

Post-Graduate Employment Opportunities

Counselors in community mental health centers, other helping professions.

Post-Graduate Career Placements

Master's program: Counselor

COPSY

- 457 Chicano/a Latino/a Psychology 3** Course Prerequisite: AMER ST 216, CES 101, 151, 254, 255, or HISTORY 150. Current psychosocial research and literature relevant to the mental health and psychological wellbeing of Chicana/o Latina/o populations.
- 501 Historical and Philosophical Foundations of Counseling Psychology 3** Course Prerequisite: Admission to Counseling Psychology PhD program. History of counseling psychology; philosophical and psychological systems; current identity of counseling psychology as an academic discipline and a profession.
- 502 Social Psychology Foundations in Educational and Counseling Psychology 3** Social psychology with a special emphasis on the relevance to education and counseling psychology.
- 503 Community Counseling 3** Course Prerequisite: Graduate student in Community Counseling program. Counseling in community settings.
- 511 Theories, Research, and Techniques in Counseling Psychology I 3** Philosophical assumptions, theory of personality, counseling process, techniques and relevant research in the major theories of counseling and personality.
- 512 Counseling Techniques and Microskills 3** Course Prerequisite: COUN PSY 511. Foundation course for all clinical experiences in counseling; communication and interpersonal skills under faculty supervision will be emphasized.
- 513 Career Counseling: Theories and Methods 3** Theories, concepts, methods and findings in career counseling; vocational assessment and prediction.

- 515 Ethics and Professional Problems in Counseling Psychology** 3 Professional problems; ethical, legal, and training issues, practices, and new issues.
- 516 Life Span Development and Counseling Issues** 3 Major theories and issues in human development and their application to counseling practice including case conceptualization, treatment and intervention planning and psychological assessment and research.
- 517 Diagnoses, Psychopathology and Counseling Psychology** 3 Course Prerequisite: COUN PSY 511. Psychopathology and the application of counseling theories to diagnoses, case conceptualization, assessments, treatment plans and research.
- 518 Theoretical Foundations of Group Counseling** 3 Course Prerequisite: COUN PSY 512 or concurrent enrollment. History, philosophy and theoretical foundations; the group counselor, members, and issues in group counseling.
- 523 Topics in Counseling Psychology V** 1-4 May be repeated for credit; cumulative maximum 8 hours. Recent research, developments, issues, and/or applications in selected areas of counseling psychology.
- 525 Counseling Diverse Populations** 3 Course Prerequisite: COUN PSY 512. Research and theories regarding the influence of culture, gender, and lifestyle on counseling processes; application of appropriate assessment/treatment strategies.
- 527 Individual Appraisal I** 3 Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Cognitive assessment of individuals, with an emphasis on the theoretical background and practical skills needed to administer, score, and interpret individual intelligence tests; assessment of learning disabilities, AD/HD, and individual achievement.
- 528 Individual Appraisal II** 3 Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Interpretation of representative personality assessment inventories and symptom checklists used in counseling practice; integration of results in psychological reports.
- 529 Counselor Supervision: Theory, Research, and Practice** 3 Course Prerequisite: Admission to Counseling Psychology PhD program. Survey of major theoretical approaches, techniques, and research in models of counselor supervision and training.
- 531 Current Issues in School Counseling I** 3 Course Prerequisite: Admission to MA program in School Counseling. Issues of immediate concern to school counselors: drug abuse, family violence, adolescent suicide, sexual orientation, crisis intervention, consultation and referral.
- 532 Current Issues in School Counseling II** 3 Course Prerequisite: COUN PSY 531. Additional coverage of contemporary issues of concern to school counselors; comprehensive developmental school programs, school community dynamics, parental involvement, consultation.
- 533 Master's Internship in Community Counseling** 4 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of counseling theory and techniques in an agency setting.
- 535 Master's Internship in School Counseling** 4 May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of guidance and counseling theory and techniques in a school setting.
- 537 Professional Development in Counseling Psychology** 3 NBCC requirements; growth and development, social and cultural foundations, the helping relationship, group dynamics, career, appraisal and research.
- 541 Clinical and Experimental Hypnosis Seminar** 3 Course Prerequisite: Student in counseling, educational, experimental, or clinical psychology. Clinical and experimental hypnosis, emphasizing applied research and clinical methods.
- 542 Cross-cultural Research in Counseling and Assessment** 3 Cross-cultural research methods, concepts, and findings in counseling and assessment.
- 551 Doctoral Practicum in Counseling Psychology I** 4 (2-6) Course Prerequisite: Admission to Counseling Psychology PhD program; COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment; COUN PSY 517 or concurrent enrollment. Supervised experiences in the application of counseling psychology theory and techniques.
- 552 Doctoral Practicum in Counseling Psychology II** 4 (2-6) Course Prerequisite: COUN PSY 551. Supervised experiences in the application of counseling psychology theory and techniques.
- 553 Doctoral Practicum in Counseling Psychology III** 4 (3-3) May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 552. Supervised experiences in the application of counseling psychology theory and techniques.
- 561 Continuing Counseling ESA Certification** V 2-6 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Initial Counselor Certification; equivalent of 180 full days of school counselor experience; by department consent only. Peer review requirements for continuing level ESA Counselor Certification.
- 590 Seminar in Research in Counseling Psychology** 3 Course Prerequisite: By interview only. Recent developments in counseling psychology research and design applied to PhD dissertation proposals.
- 596 Pet Loss and Human Bereavement** 1 Addresses human bereavement and grief in the context of the human/animal relationship.
- 597 Counseling Psychology Internship** V 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience, individual and group counseling, evaluation, assessment, supervision, and teaching.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction: application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V** 2-3 Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V** 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Counseling

Degree offered: Master of Arts in Education - Non Thesis

Faculty working with graduate students: 10

Graduate students: 54

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

The curriculum for Community Counseling program includes course work in theory, research, and techniques in individual and group counseling; vocational/career counseling and assessment; professional and ethical issues; life-span development; counseling diverse populations; statistics, measurement, and research design. Students in the Community Counseling program take additional coursework in personality assessment, diagnosis and psychopathology, and two semesters of internship in community mental health settings. Additional courses are available on an elective basis, including courses on hypnosis, counselor supervision, substance abuse counseling, Chicano/Latino psychology, cross-cultural counseling research, social psychology, and program evaluation. 4000 Character Limit.

Program Description

The counseling psychology program offers a Ph.D. degree and a Master of Arts degree available at the Pullman campus. The Ph.D. in counseling psychology program prepares students for careers in counseling, teaching, research, and other professional roles as counseling psychologists. For example, graduates obtain positions in university counseling centers, academic faculty in counseling psychology departments, private or group practice in psychology, or other mental health settings as therapists. Graduates of the program are license-eligible in most states. The Ph.D. program has been accredited by the American Psychological Association (APA) since 1990. The M.A. program with emphasis in community counseling, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students in either program can pursue the Master of Arts (M.A.) degree, with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although

M.A. graduates without thesis also apply for and enter doctoral programs.

Degree Description

Master's degrees in counseling focus on community counseling, which, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students can pursue the Master of Arts (M.A.) degree, with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although M.A. graduates without thesis also apply for and enter doctoral programs.

Post-Graduate Employment Opportunities

Counselors in community mental health centers, other helping professions.

Post-Graduate Career Placements

Master's program: Counselor

Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Counseling Psychology

Degree offered: Doctor of Philosophy (Education)

Faculty working with graduate students: 9

Graduate students: 37

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

Students in the doctoral program who have completed a master's degree may be allowed to waive certain required courses. Once admitted, a complete waiver application must be submitted to the Office of Graduate Studies for each course a student wishes to waive by May 1st.

Program Description

The counseling psychology program offers a Ph.D. degree and a Master of Arts degree available at the Pullman campus. The Ph.D. in counseling psychology program prepares students for careers in counseling, teaching, research, and other professional roles as counseling psychologists. For example, graduates obtain positions in university counseling centers, academic faculty in counseling psychology departments, private or group practice in psychology, or other mental health settings as therapists. Graduates of the program are license-eligible in most states. The Ph.D. program has been accredited by the American Psychological Association (APA) since 1990. The M.A. program with emphasis in community counseling, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students in either program can pursue the Master of Arts (M.A.) degree, with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although M.A. graduates without thesis also apply for and enter doctoral

programs.

Degree Description

The Ph.D. in counseling psychology program prepares students for careers in counseling, teaching, research, and other professional roles as counseling psychologists. For example, graduates obtain positions in university counseling centers, academic faculty in counseling psychology departments, private or group practice in psychology, or other mental health settings as therapists. Graduates of the program are license-eligible in most states. The Ph.D. program has been accredited by the American Psychological Association (APA) since 1990. The program was awarded the Suinn Minority Achievement award, which is awarded by the APA to programs that are exemplary in the recruitment and retention of diverse students and in a program focus on cultural diversity.

Post-Graduate Employment Opportunities

Postdoctoral clinical or research positions, staff psychologist at university counseling centers, university faculty, licensed psychologist in private practice, and in community mental health organizations.

Post-Graduate Career Placements

Psychologist, San Jose State University; assistant professor, De La Salle University (Philippines); mental health specialist, LeRoy Haynes Center for Children (Laverne, CA); behavioral therapist, St. Luke's Rehabilitation Institute (Spokane, WA); postdoctoral position at University of California, Berkeley

- 590 Seminar in Research in Counseling Psychology** 3 Course Prerequisite: By interview only. Recent developments in counseling psychology research and design applied to PhD dissertation proposals.
- 596 Pet Loss and Human Bereavement** 1 Addresses human bereavement and grief in the context of the human/animal relationship.

- 597 Counseling Psychology Internship V** 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience, individual and group counseling, evaluation, assessment, supervision, and teaching.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- ED AD**
- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V** 2-3 The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V** 2-3 Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V** 2-3 Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V** 2-3 Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.

- 562 Professional Issues in Student Affairs Administration 3**
Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction: application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.

- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDRES**
- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).

- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

PSYCH

- 502 Research Design V 1-3** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V 1-3** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology V 1-3** May be repeated for credit.
- 510 Introduction to Online Instruction 1** Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.
- 511 Analysis of Variance and Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design 3** May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics 3** Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data 3** Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software 3** Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy 3** Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues 3** Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology 3** Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology 3** Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis 3** Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment 3** Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment 3** Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.

- 542 Child and Adolescent Psychopathology 3** Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy 3** Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions 3** Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum 3 (0-9)** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum V 1-3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship V 1-3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology 3** Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology 3** Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology 3** Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior 3** Sensory and physiological aspects of vision, audition, and other senses.
- 591 Principles of Learning 3** Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior 3** Course Prerequisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology V 2-16** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Counseling Psychology

Degree offered: Master of Education

Faculty working with graduate students: 10

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

The School Counseling and Community Counseling programs are available at the Pullman campus. Most students are enrolled full-time. The curriculum for both programs includes course work in theory, research, and techniques in individual and group counseling; vocational/career counseling and assessment; professional and ethical issues; life-span development; counseling diverse populations; statistics, measurement, and research design. In addition, students in the School Counseling program complete a two-course sequence on current issues in school counseling,

a course in cognitive assessment, a course in learning theory, and two semesters of internship in the public school setting. Students in the Community Counseling program take additional coursework in personality assessment, diagnosis and psychopathology, and two semesters of internship in community mental health settings. For both programs, additional courses are available on an elective basis, including courses on hypnosis, counselor supervision, substance abuse counseling, Chicano/Latino psychology, cross-cultural counseling research, social psychology, and program evaluation.

Program Description

The counseling psychology program offers a Ph.D. degree and a Master of Arts degree available at the Pullman campus. The Ph.D. in counseling psychology program prepares students for careers in counseling, teaching, research, and other professional roles as counseling psychologists. For example, graduates obtain positions in university counseling centers, academic faculty in counseling psychology departments, private or group practice in psychology, or other mental health settings as therapists. Graduates of the program are license-eligible in most states. The Ph.D. program has been accredited by the American Psychological Association (APA) since 1990. The M.A. program with emphasis in community counseling, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students in either program can pursue the Master of Arts (M.A.) degree, with or without thesis. The M.A. degree, with thesis, can be helpful for students who plan to subsequently apply for doctoral programs or who have a strong interest in conducting research, although M.A. graduates without thesis also apply for and enter doctoral programs.

Degree Description

Master's programs in counseling focus on one of two professional options: school counseling, which prepares students for initial certification as K-12 school counselors, and community counseling, which, in combination with the fulfillment of additional post-degree requirements, prepares students for licensure as a mental health counselor. Students who are pursuing certification as school counselors receive additional training to be effective in school settings. The Ed.M. program is generally pursued by those who intend to work in a K-12 educational or community/agency setting.

COPSY

- 501 Historical and Philosophical Foundations of Counseling Psychology** 3 Course Prerequisite: Admission to Counseling Psychology PhD program. History of counseling psychology; philosophical and psychological systems; current identity of counseling psychology as an academic discipline and a profession.
- 502 Social Psychology Foundations in Educational and Counseling Psychology** 3 Social psychology with a special emphasis on the relevance to education and counseling psychology.
- 503 Community Counseling** 3 Course Prerequisite: Graduate student in Community Counseling program. Counseling in community settings.
- 511 Theories, Research, and Techniques in Counseling Psychology I** 3 Philosophical assumptions, theory of personality, counseling process, techniques and relevant research in the major theories of counseling and personality.
- 512 Counseling Techniques and Microskills** 3 Course Prerequisite: COUN PSY 511. Foundation course for all clinical experiences in counseling; communication and interpersonal skills under faculty supervision will be emphasized.
- 513 Career Counseling: Theories and Methods** 3 Theories, concepts, methods and findings in career counseling; vocational assessment and prediction.
- 515 Ethics and Professional Problems in Counseling Psychology** 3 Professional problems; ethical, legal, and training issues, practices, and new issues.
- 516 Life Span Development and Counseling Issues** 3 Major theories and issues in human development and their application to counseling practice including case conceptualization, treatment and intervention planning and psychological assessment and research.
- 517 Diagnoses, Psychopathology and Counseling Psychology** 3 Course Prerequisite: COUN PSY 511. Psychopathology and the application of counseling theories to diagnoses, case conceptualization, assessments, treatment plans and research.
- 518 Theoretical Foundations of Group Counseling** 3 Course Prerequisite: COUN PSY 512 or concurrent enrollment. History, philosophy and theoretical foundations; the group counselor, members, and issues in group counseling.

- 523 Topics in Counseling Psychology V** 1-4 May be repeated for credit; cumulative maximum 8 hours. Recent research, developments, issues, and/or applications in selected areas of counseling psychology.
- 525 Counseling Diverse Populations 3** Course Prerequisite: COUN PSY 512. Research and theories regarding the influence of culture, gender, and lifestyle on counseling processes; application of appropriate assessment/treatment strategies.
- 527 Individual Appraisal I 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Cognitive assessment of individuals, with an emphasis on the theoretical background and practical skills needed to administer, score, and interpret individual intelligence tests; assessment of learning disabilities, AD/HD, and individual achievement.
- 528 Individual Appraisal II 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Interpretation of representative personality assessment inventories and symptom checklists used in counseling practice; integration of results in psychological reports.
- 529 Counselor Supervision: Theory, Research, and Practice 3** Course Prerequisite: Admission to Counseling Psychology PhD program. Survey of major theoretical approaches, techniques, and research in models of counselor supervision and training.
- 531 Current Issues in School Counseling I 3** Course Prerequisite: Admission to MA program in School Counseling. Issues of immediate concern to school counselors: drug abuse, family violence, adolescent suicide, sexual orientation, crisis intervention, consultation and referral.
- 532 Current Issues in School Counseling II 3** Course Prerequisite: COUN PSY 531. Additional coverage of contemporary issues of concern to school counselors; comprehensive developmental school programs, school community dynamics, parental involvement, consultation.
- 533 Master's Internship in Community Counseling 4** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of counseling theory and techniques in an agency setting.
- 535 Master's Internship in School Counseling 4** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of guidance and counseling theory and techniques in a school setting.
- 537 Professional Development in Counseling Psychology 3** NBCC requirements; growth and development, social and cultural foundations, the helping relationship, group dynamics, career, appraisal and research.
- 541 Clinical and Experimental Hypnosis Seminar 3** Course Prerequisite: Student in counseling, educational, experimental, or clinical psychology. Clinical and experimental hypnosis, emphasizing applied research and clinical methods.
- 542 Cross-cultural Research in Counseling and Assessment 3** Cross-cultural research methods, concepts, and findings in counseling and assessment.
- 551 Doctoral Practicum in Counseling Psychology I 4 (2-6)** Course Prerequisite: Admission to Counseling Psychology PhD program; COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment; COUN PSY 517 or concurrent enrollment. Supervised experiences in the application of counseling psychology theory and techniques.
- 552 Doctoral Practicum in Counseling Psychology II 4 (2-6)** Course Prerequisite: COUN PSY 551. Supervised experiences in the application of counseling psychology theory and techniques.
- 553 Doctoral Practicum in Counseling Psychology III 4 (3-3)** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 552. Supervised experiences in the application of counseling psychology theory and techniques.
- 561 Continuing Counseling ESA Certification V** 2-6 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Initial Counselor Certification; equivalent of 180 full days of school counselor experience; by department consent only. Peer review requirements for continuing level ESA Counselor Certification.
- 590 Seminar in Research in Counseling Psychology 3** Course Prerequisite: By interview only. Recent developments in counseling psychology research and design applied to PhD dissertation proposals.
- 596 Pet Loss and Human Bereavement 1** Addresses human bereavement and grief in the context of the human/animal relationship.
- 597 Counseling Psychology Internship V** 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience, individual and group counseling, evaluation, assessment, supervision, and teaching.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDPSY

502 Theoretical Foundations of Learning and Instruction 3 Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.

503 Advanced Educational Psychology 3 Contemporary theories, models, and empirical research in educational psychology.

504 Classroom-focused Research Methods 2 Methods, design, implementation, and application of results in classroom context.

505 Research Methods I 3 Research methods; literature review; design, implementation, and interpretation of results.

508 Educational Statistics 3 Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.

509 Educational Measurements: Test Development and Assessment V 2-3 Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.

510 Assessment of Learning 3 Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.

511 Classical and Modern Test Theory 3 Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.

521 Topics in Educational Psychology V 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.

563 Principles of Research 3 The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).

564 Qualitative Research 3 Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).

565 Quantitative Research 3 Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).

568 Quasi-Experimental Design 3 Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.

569 Seminar in Quantitative Techniques in Education V 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.

570 Introduction to Program Evaluation 3 Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.

571 Advanced Program Evaluation 3 Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.

572 Introduction to Systematic Literature Reviews and Meta-Analyses 3 Introduction to the steps involved in conducting systematic reviews and meta-analyses.

573 Motivation Theories 3 Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.

574 Seminar in Educational Psychology 1 May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.

597 Educational Psychology Internship V 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18
May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Criminal Justice

Degree offered: Doctor of Philosophy (Criminal Justice)

Faculty working with graduate students: 12

Graduate students: 35

Graduate students receiving assistantships or scholarships: 71%

Tests required: GRE (Combined)

Deadline: Fall: January 10
Spring: July 1

Requirements

None other than listed

Program Description

The Criminal Justice graduate program is designed to increase student understanding of the nature and causes of crime, the operation of the criminal justice system and its institutions, and the development and reform of criminal justice policy. Courses and research are grounded in theoretical foundations upon which students can learn to address real world problems. Emphasis is placed on understanding, designing, and conducting research from multiple perspectives to help students become educated policymakers, researchers, and scholars. Substantive emphases include criminal justice institutions and policies, the connections between criminal justice policies and public health, and comparative and international criminal justice. Courses are taught and research is conducted from an interdisciplinary perspective by a diversely educated graduate faculty.

Degree Description

The mission of Criminal Justice Ph.D. program is to advance the development of criminological and criminal justice research and theory, and to train graduate students to conduct and understand theoretically based research involving crime and the criminal justice system. Upon completion of their graduate program, graduate students in criminal justice will be able to read and evaluate data and social science research, analyze and develop criminal justice policy, conduct independent research related to criminology and criminal justice, and communicate original research findings and analyses of secondary research cogently for consideration by multiple audiences.

Training and Professional Development Opportunities

Program evaluation, online instruction and curriculum development, advanced statistical training.

Post-Graduate Employment Opportunities

Academia, grant specialist, research manager, and planning and evaluation director for state and local criminal justice agencies.

Post-Graduate Career Placements

Research university professorships, police and corrections management.

CRM J

- 403 Violence Toward Women 3** Course Prerequisite: Junior standing. Violence toward women and its relationship to broader social issues such as sexism and social control. (Cross-listed course offered as CRM J 403, WOMEN ST 403).
- 420 Criminal Procedure 3** Principal court decisions concerning standards of conduct and rights in the criminal process.
- 426 Victimology and Public Policy 3** Examination of victimization; policy responses to victims; victim's rights.
- 427 Crime Prevention Strategies 3** Personal, environmental, community-based and government crime prevention strategies and issues.
- 428 Drug and Alcohol Use and Abuse 3** Drug use, impact on behavior and drug control policies.
- 450 Senior Seminar: Ethical Issues in Criminal Justice 3** Examination of ethical issues in decision making in criminal justice.
- 468 Addictive Behavior Across the Demographic Spectrum 3** Course Prerequisite: Junior standing. Overview of social, cultural and historical perspectives on dealing with addictive behavior. (Cross-listed course offered as SOC 468, CRM J 468, PSYCH 468). Recommended preparation: SOC 101, PSYCH 105, or CRM J 101.
- 490 Criminal Justice Internship V 2-12** May be repeated for credit; cumulative maximum 12 hours. On/off-campus internship in criminal justice institutions (police, FBI, jails, law firms, etc.); written assignments and readings will be required.

- 499 Special Problems V** 1-4 May be repeated for credit. Independent study conducted under the jurisdiction of an approving faculty member; may include independent research studies in technical or specialized problems; selection and analysis of specified readings; development of a creative project; or field experiences.
- 505 Comparative Criminal Justice** 3 Comparative study of crime laws and criminal justice systems in selected foreign countries. (Cross-listed course offered as CRM J 505, POL S 505).
- 510 Leadership in Criminal Justice** 3 Study of leadership models and theories as they apply to criminal justice institutions.
- 511 Criminal Justice Management** 3 Examines the theoretical framework for understanding criminal justice organizations through examining management theory, organizational dynamics, and administration research.
- 512 Juvenile Justice** 3 Examination of the major theories and contemporary issues related to juvenile delinquency, the juvenile justice system, gangs, and juvenile corrections.
- 513 Multicultural Issues in Criminal Justice** 3 Critical examination of race, gender, and other diversity and cultural issues within the U.S. criminal justice system.
- 514 Professional Development in Criminal Justice and Criminology** 1 Professional aspects of research, teaching, and service activities in criminal justice and criminology.
- 520 Criminal Justice Research Methods** 3 The design and execution of criminal justice research; critical examination of current research methods in criminal justice.
- 521 Advanced Topics in Criminal Justice Research Methods** 3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 520. Exploration of specialized topics in research methodology; topics may include qualitative methods, GIS, ethnography, and survey design.
- 522 Foundations of Quantitative Methods** 3 Application of foundational quantitative methods utilized in the field of Criminal Justice and Criminology.
- 523 Intermediate Quantitative Methods** 3 Course Prerequisite: CRM J 522. Intermediate-level quantitative methods including logistic regression, factor analysis, propensity scoring and model building.
- 524 Advanced Topics in Quantitative Methods** 3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 523. Advanced quantitative methods used in criminal justice, including time series, HLM, multi-level modeling, spatial analysis, and repeated measures analysis.
- 530 Criminal Justice: Process and Institutions** 3 Processes of criminal justice in the context of the social, political, and economic environments.
- 531 Drugs, Alcohol, and Crime** 3 Examination of the research and theory surrounding the relationship between alcohol, drugs, crime, and the criminal justice system.
- 540 Seminar in Evaluation Research** 3 Interrelationship of ideology, data, policy development, and policy implementation in public policy analysis. (Cross-listed course offered as CRM J 540, POL S 541).
- 541 Seminar in Corrections** 3 Current issues related to the control, management, and sanctioning of criminal offenders.
- 542 Community Corrections** 3 Examines correctional processes in a community setting, including probation, parole, and innovative community-based strategies for dealing with the offender.
- 555 Seminar in Criminological Theory** 3 Individual, situational and ecological correlates of criminal behavior; data sources and empirical research.
- 560 Prosecution and Adjudication** 3 The function of courts and the behavior of prosecutors, defense attorneys and judges within the criminal justice system.
- 570 The Police and Society** 3 Community and selected social institutional factors as related to their influence on police systems.
- 572 Seminar in Comparative Policing** 3 Study of the history, organization, and policies of policing systems in selected countries and of transnational policing.
- 580 Gender and Justice** 3 Criminal justice system's treatment of women offenders, victims, and professionals.
- 590 PRACTICUM V** 1-6 May be repeated for credit; cumulative maximum 6 hours. S, F Grading.
- 591 Seminar in the Administration of Criminal Justice** 3 May be repeated for credit; cumulative maximum 6 hours. Current issues, problems, and critical concerns within the field of administration of criminal justice.
- 592 Proseminar in Administration, Justice, and Applied Policy Studies** 3 May be repeated for credit; cumulative maximum 6 hours. Same as POL S 542.
- 593 Special Topics in Criminological Theory** 3 May be repeated for credit; cumulative maximum 6 hours. Intense examination of a contemporary criminological theory, school, or paradigm.
- 594 Special Topics in Comparative Criminology and Criminal Justice** 3 May be repeated for credit; cumulative maximum 6 hours. Intensive study of specific topics in comparative criminal justice or criminology.
- 595 Advanced Topics in Criminal Justice Institutions and Processes** 3 May be repeated for credit; cumulative maximum 6 hours. In-depth study of issues associated with criminal justice institutions and processes.
- 596 Special Topics: Criminal Justice and Public Health** 3 May be repeated for credit; cumulative maximum 6 hours. Examination of public health ramifications of criminal justice policy and practice; public health approaches to violence and substance abuse prevention.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Criminal Justice

Degree offered: Master of Arts in Criminal Justice - Non Thesis

Faculty working with graduate students: 13

Graduate students: 12

Program offered: DDP, Pullman, Spokane

Tests required: GRE (Combined)

Deadline: Fall: January 10

Spring: July 1

Requirements

None

Program Description

The Criminal Justice graduate program is designed to increase student understanding of the nature and causes of crime, the operation of the criminal justice system and its institutions, and the development and reform of criminal justice policy. Courses and research are grounded in theoretical foundations upon which students can learn to address real world problems. Emphasis is placed on understanding, designing, and conducting research from multiple perspectives to help students become educated policymakers, researchers, and scholars. Substantive emphases include criminal justice institutions and policies, the connections between criminal justice policies and public health, and comparative and international criminal justice. Courses are taught and research is conducted from an interdisciplinary perspective by a diversely educated graduate faculty.

Degree Description

The Master of Arts in criminal justice is designed to develop and enhance the student's knowledge of criminal justice; expand and develop a student's analytical and assessment skills; and further develop their facility with oral and written communication and with research. The program is flexible and provides a superb basis for entry into graduate work at the doctoral level or applied work in criminal justice agencies. Approximately 70% of our M.A. graduates are employed in applied settings while the balance have pursued teaching and research careers.

Training and Professional Development Opportunities

Program evaluation, internships.

Post-Graduate Employment Opportunities

Federal law enforcement, secret service, IRS, Immigration and Customs, Homeland Security, corrections, police and corrections planning and analysis.

Post-Graduate Career Placements

IRS, ICE, Naval Criminal Investigations, criminal justice leadership, police chief, sheriff, lawyer.

CRM J

505 Comparative Criminal Justice 3 Comparative study of crime laws and criminal justice systems in selected foreign countries. (Cross-listed course offered as CRM J 505, POL S 505).

510 Leadership in Criminal Justice 3 Study of leadership models and theories as they apply to criminal justice institutions.

- 511 **Criminal Justice Management 3** Examines the theoretical framework for understanding criminal justice organizations through examining management theory, organizational dynamics, and administration research.
- 512 **Juvenile Justice 3** Examination of the major theories and contemporary issues related to juvenile delinquency, the juvenile justice system, gangs, and juvenile corrections.
- 513 **Multicultural Issues in Criminal Justice 3** Critical examination of race, gender, and other diversity and cultural issues within the U.S. criminal justice system.
- 514 **Professional Development in Criminal Justice and Criminology 1** Professional aspects of research, teaching, and service activities in criminal justice and criminology.
- 520 **Criminal Justice Research Methods 3** The design and execution of criminal justice research; critical examination of current research methods in criminal justice.
- 521 **Advanced Topics in Criminal Justice Research Methods 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 520. Exploration of specialized topics in research methodology; topics may include qualitative methods, GIS, ethnography, and survey design.
- 522 **Foundations of Quantitative Methods 3** Application of foundational quantitative methods utilized in the field of Criminal Justice and Criminology.
- 523 **Intermediate Quantitative Methods 3** Course Prerequisite: CRM J 522. Intermediate-level quantitative methods including logistic regression, factor analysis, propensity scoring and model building.
- 524 **Advanced Topics in Quantitative Methods 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 523. Advanced quantitative methods used in criminal justice, including time series, HLM, multi-level modeling, spatial analysis, and repeated measures analysis.
- 530 **Criminal Justice: Process and Institutions 3** Processes of criminal justice in the context of the social, political, and economic environments.
- 531 **Drugs, Alcohol, and Crime 3** Examination of the research and theory surrounding the relationship between alcohol, drugs, crime, and the criminal justice system.
- 540 **Seminar in Evaluation Research 3** Interrelationship of ideology, data, policy development, and policy implementation in public policy analysis. (Cross-listed course offered as CRM J 540, POL S 541).
- 541 **Seminar in Corrections 3** Current issues related to the control, management, and sanctioning of criminal offenders.
- 542 **Community Corrections 3** Examines correctional processes in a community setting, including probation, parole, and innovative community-based strategies for dealing with the offender.
- 555 **Seminar in Criminological Theory 3** Individual, situational and ecological correlates of criminal behavior; data sources and empirical research.
- 560 **Prosecution and Adjudication 3** The function of courts and the behavior of prosecutors, defense attorneys and judges within the criminal justice system.
- 570 **The Police and Society 3** Community and selected social institutional factors as related to their influence on police systems.
- 572 **Seminar in Comparative Policing 3** Study of the history, organization, and policies of policing systems in selected countries and of transnational policing.
- 580 **Gender and Justice 3** Criminal justice system's treatment of women offenders, victims, and professionals.
- 590 **PRACTICUM V 1-6** May be repeated for credit; cumulative maximum 6 hours. S, F Grading.
- 591 **Seminar in the Administration of Criminal Justice 3** May be repeated for credit; cumulative maximum 6 hours. Current issues, problems, and critical concerns within the field of administration of criminal justice.
- 592 **Proseminar in Administration, Justice, and Applied Policy Studies 3** May be repeated for credit; cumulative maximum 6 hours. Same as POL S 542.
- 593 **Special Topics in Criminological Theory 3** May be repeated for credit; cumulative maximum 6 hours. Intense examination of a contemporary criminological theory, school, or paradigm.
- 594 **Special Topics in Comparative Criminology and Criminal Justice 3** May be repeated for credit; cumulative maximum 6 hours. Intensive study of specific topics in comparative criminal justice or criminology.
- 595 **Advanced Topics in Criminal Justice Institutions and Processes 3** May be repeated for credit; cumulative maximum 6 hours. In-depth study of issues associated with criminal justice institutions and processes.
- 596 **Special Topics: Criminal Justice and Public Health 3** May be repeated for credit; cumulative maximum 6 hours. Examination of public health ramifications of criminal justice policy and practice; public health approaches to violence and substance abuse prevention.
- 600 **Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 **Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 **Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18

May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Crop Science

Degree offered: Doctor of Philosophy (Crop Science)

Faculty working with graduate students: 86

Graduate students: 35

Graduate students receiving assistantships or scholarships: 100%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Fifteen hours of 500-level grade coursework are required; not included but required are 2 credits of Crops 510 Seminar and 1 credit of Crops 512 State Tour. Two credits of Crops 511 Research Proposal and Development are also required (S/F grading). No more than half of the graded credit may be transfer credit. Seventy-two credits are required for the degree.

Program Description

The Department of Crop and Soil Sciences at Washington State University department offers M.S. and Ph.D. programs in Crop Science, with the ability to conduct graduate research in a variety of specialized areas within each discipline. Current research in Crop Science is being conducted in the areas of plant breeding and genetics, molecular genetics, crop production, turf management, weed science, plant physiology, and cereal chemistry. We work with wheat, forages, barley, grain legumes, brassicas and turf. We have several research projects conducted in cooperation with the United States Department of Agriculture (USDA) through the USDA Agricultural Research Service (USDA-ARS) and USDA Natural Resources Conservation Service (USDA-NRCS) in addition to research projects being conducted in association with other universities. Research facilities include state of the art laboratories and greenhouse facilities, and research farms located in Pullman, as well as throughout the state at five Research and Extension Centers. Graduate students learn valuable skills and knowledge working side by side with faculty members and research technicians providing them the opportunity to play an integral role in the advancement of their major advisor's research. Students also have the opportunity to gain leadership, communication, and instructional experience through the option of serving as teaching assistants for one or more courses within their discipline. Qualified students typically receive competitive teaching or research assistantships. These assistantships provide non-resident and resident tuition waivers, paid health insurance, and stipends to help cover living expenses.

Degree Description

Training and Professional Development Opportunities

Students have the opportunity to gain leadership, communication, and instructional experience through the option of serving as teaching assistants for one or more courses within their discipline. Extension program delivery, and Graduate School teacher training and grant proposal writing workshop opportunities are also available.

Post-Graduate Employment Opportunities

Crop scientists with advanced degrees may find employment in government agencies, national labs, academia, private business, agricultural consulting, and international agriculture.

CROPS

503 Advanced Cropping Systems 3 Understanding the management of constraints to crop production and quality; biological, physical, and chemical approaches to crop health management. Field trips required. (Cross-listed course offered as CROP SCI 403, PL P 403). Recommended preparation: CROP SCI 305; PL P 429.

- 504 Plant Transmission Genetics 3** Transmission of genes across generations; detailed study of the basic laws of genetics to predict and describe inheritance.
- 505 Advanced Classical and Molecular Breeding 3** Characterization and principles of improving crop quality and adaptation traits with emphasis on molecular breeding strategies. Required preparation must include upper-division course in biology, genetics, or plant breeding.
- 510 Seminar 1** May be repeated for credit. Literature review; preparation and presentation of reports in crop science.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 512 Topics in Crop Science V 1-2** May be repeated for credit. Concepts of plant breeding, seed physiology, and technology; crop physiology and management.
- 545 Quantitative Trait Improvement 3** Concepts and applications in modern plant breeding programs.
- 554 Chromosome Structure and Function 3** Structural and functional organization of eukaryotic chromosomes. Required preparation must include upper-division course in biology, genetics, or plant breeding.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Crop Science

Degree offered: Master of Science in Crop Science

Faculty working with graduate students: 92

Graduate students: 17

Graduate students receiving assistantships or scholarships: 100%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Twenty-one hours of graded credit are required, including seminar and state-wide tour. Twenty-six credits are required overall.

Program Description

The Department of Crop and Soil Sciences at Washington State University department offers M.S. and Ph.D. programs in Crop Science, with the ability to conduct graduate research in a variety of specialized areas within each discipline. Current research in Crop Science is being conducted in the areas of plant breeding and genetics, molecular genetics, crop production, turf management, weed science, plant physiology, and cereal chemistry. We work with wheat, forages, barley, grain legumes, brassicas and turf. We have several research projects conducted in cooperation with the United States Department of Agriculture (USDA) through the USDA Agricultural Research Service (USDA-ARS) and USDA Natural Resources Conservation Service (USDA-NRCS) in addition to research projects being conducted in association with other universities. Research facilities include state of the art laboratories and greenhouse facilities, and research farms located in Pullman, as well as throughout the state at five Research and Extension Centers. Graduate students learn valuable skills and knowledge working side by side with faculty members and research technicians providing them the opportunity to play an integral role in the advancement of their major advisor's research. Students also have the opportunity to gain leadership, communication, and instructional experience through the option of serving as teaching assistants for one or more courses within their discipline. Qualified students typically receive competitive teaching or research assistantships. These assistantships provide non-resident and resident tuition waivers, paid health insurance, and stipends to help cover living expenses.

Degree Description

Training and Professional Development Opportunities

Students have the opportunity to gain leadership, communication, and instructional experience through the option of serving as teaching assistants for one or more courses within their discipline. Extension program delivery, and Graduate School teacher training and grant proposal writing workshop opportunities are also available.

Post-Graduate Employment Opportunities

Crop scientists with advanced degrees may find employment in government agencies, national labs, academia, private business, agricultural consulting, and international agriculture.

Faculty

Stephan Albrecht, Robert Allan, Ashok Alva, Oumarou Badini, Byung-Kee Baik, Vanessa Bailey, Chuck Benbrook, Chris Benedict, Harvey Bolton, Rick Boydston, Vicki Bradley, David Brown, Ian Burke, Colin Campbell, Kimberly Campbell, Lynne Carpenter-Boggs, Arron Carter, Paolo Castiglione, Weidong Chen, Douglas Cobos, Craig Cogger, Douglas Collins, Harold Collins, Clarice Coyne, Ali Daryabeigi Zand, Joan Davenport, Kefyalew Desta, James Durfey, Nichole Embertson, Aaron Esser, Guanglong Feng, Markus Flury, Ann-Marie Fortuna, Steven Fransen, Bruce Frazier, John Gardner, Kulvinder Gill, Jessica Goldberger, Hero Gollany, Stephanie Greene, Stephen Guy, James Harsh, Jinguo Hu, David Huggins, Scot Hulbert, Devra Jarvis, William Johnston, Stephen Jones, Ann Kennedy, Kimberlee Kidwell, Theodore Kisha, Andris Kleinhofs, Thorsten Knappenberger, Richard Koenig, Drew Lyon, Kholoud Mashal, Mark Mazzola, Phillip Miklas, Timothy Miller, Alexei Morgounov, Craig Morris, Michael Neff, O Norberg, William Pan, Chris Pannkuk, Vickie Parker-Clark, Lucas Patzek, Jane Payumo, Francis Pierce, Catherine Reardon, John Reganold, Diana Roberts, William Schillinger, Brenton Sharratt, Zhenqing Shi, Daniel Skinner, Jeffrey Smith, Gwen Stahnke, Mark Stannard, Camille Steber, Robert Stevens, Jason Streubel, Michael Swan, Mark Swanson, Faruk Toklu, Jeffrey Ullman, Steven Ullrich, Stephen Vanvleet, Dietrich Vonwettstein, Matthew Williams, Joseph Yenish and Frank Young.

CROPS

- 503 Advanced Cropping Systems 3** Understanding the management of constraints to crop production and quality; biological, physical, and chemical approaches to crop health management. Field trips required. (Cross-listed course offered as CROP SCI 403, PL P 403). Recommended preparation: CROP SCI 305; PL P 429.
- 504 Plant Transmission Genetics 3** Transmission of genes across generations; detailed study of the basic laws of genetics to predict and describe inheritance.
- 505 Advanced Classical and Molecular Breeding 3** Characterization and principles of improving crop quality and adaptation traits with emphasis on molecular breeding strategies. Required preparation must include upper-division course in biology, genetics, or plant breeding.
- 510 Seminar 1** May be repeated for credit. Literature review; preparation and presentation of reports in crop science.

- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 512 Topics in Crop Science V 1-2** May be repeated for credit. Concepts of plant breeding, seed physiology, and technology; crop physiology and management.
- 545 Quantitative Trait Improvement 3** Concepts and applications in modern plant breeding programs.
- 554 Chromosome Structure and Function 3** Structural and functional organization of eukaryotic chromosomes. Required preparation must include upper-division course in biology, genetics, or plant breeding.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Crop Science

Degree offered: Master of Science in Crop Science - Non Thesis

Faculty working with graduate students: 95

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10
Spring: July 1

Requirements

Twenty-six hours of graded coursework are required, including seminar and state-wide tour. Thirty hours are required overall.

Doctor of Education (Ed.D) – Educational Administration

Degree offered: Doctor of Education in Educational Administration

Faculty working with graduate students: 14

Program offered: Pullman, Spokane, Tri-Cities, Vancouver

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Not Accepting Applications

WSU is not accepting applications for this degree at this time.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman

campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The education administration program offers graduate studies at the master's and doctoral levels, plus administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer a specialization in K-12 educational leadership. Program faculty provide a balance and integration of practical experience, theory, and research and aim to prepare educational leaders who function as scholar-practitioners. All campuses offer the educational leadership master's degrees, certification programs, and access to the state-wide doctor of education degree; one-year residency is required for the doctor of philosophy degree. The University's educational leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. The administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. The goal of these standards and our programs is to prepare educational leaders who can provide effective leadership to promote learning for all children in K-12 schools. Washington State University's innovative field-based principal and superintendent certification programs serve certification candidates in a cohort-based program that promotes a close professional network.

Faculty

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Paul Goldman, James Howard, Kristin Huggins, Joan Kingrey, Chad Lochmiller, Forrest Parkay, Dennis Ray, Nancy Sanders, Gay Selby, Gene Sharratt and Danny Talbot.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.

- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.

- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDRES**
- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.

- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.
- Teaching and Learning**
- T & L**
- 501 Bilingual/ESL Education 3** May be repeated for credit; cumulative maximum 6 hours. Work with students from diverse linguistic and cultural backgrounds in educational settings.
- 502 Assessment for Teaching and Learning V 2-3** Instruction in sound assessment practices for preservice and inservice graduate students.
- 503 ESL Methods and Material for Secondary Content Teachers 2** Research-based ESL strategies and methods for pre-service and secondary content area teachers.
- 504 Advanced Study in Linguistics for Educators 3** Use of linguistics to better understand second language learning and teaching and the physical aspects of acquiring a language.
- 505 ESL Methods for General Educators (K-8) 2** Course Prerequisite: For candidates admitted to MIT. Research-based ESL strategies and methods for pre-service and experienced teachers.
- 506 Multicultural Classroom Instruction and Management 4** Instructional and management strategies for maximizing students' opportunities to learn in a multicultural setting.
- 507 Seminar in Literacy in Multicultural Settings I 3** Multicultural perspective to curriculum development and classroom literacy practices.
- 508 Seminar in Literacy in Multicultural Settings II 3** Course Prerequisite: TCH LRN 507. Multicultural perspective to curriculum development and classroom literacy practices.
- 509 Research in Curriculum and Assessment for Bilingual/ESL Education 3** Research in curriculum development for and assessment of language minority students. Recommended preparation: TCH LRN 510; TCH LRN 549.
- 510 Theoretical Foundations of Bilingual/ESL Education 3** Theoretical foundations related to research and instructional strategies for effective schooling of language minority students. Credit not granted for TCH LRN 410 and 510. Credit not granted for both TCH LRN 410 and TCH LRN 510.
- 512 Language and Cultural Factors in Mathematics 3** Research and instructional strategies related to linguistic and cultural influences on learning math.
- 513 Seminar in Middle School Education 3** For experienced teachers. Curriculum patterns and recent research regarding instruction and materials in the contemporary middle school.
- 514 Methods and Materials for Bilingual/ESL Education 3** Research and instructional methods related to English language acquisition across content areas. Credit not granted for both TCH LRN 414 and TCH LRN 514. Recommended preparation: Recommended: TCH LRN 410 or 510; TCH LRN 509; TCH LRN 549.
- 515 The Education of Cultural and Linguistic Minority Students 3** Issues in the education of language minority students.
- 516 Advanced Study in Computer-Assisted Language Learning 3** Research, theory, and practice in computer-assisted language learning.
- 517 Educational Technology in K-8 Schools 2 (1-2)** Course Prerequisite: For candidates admitted to MIT. Technology standards for teachers, technology use in schools, production techniques and instructional methods.
- 518 Integrating Technology into the Curriculum 3** Examination and articulation of the potential for new technologies to expand learning opportunities.
- 519 Instructional Media Production I 3** Instructional media development, emphasizing the theory and methods of instructional design, digital media production and evaluation.
- 520 Topics in Special Student Populations V 1-4** May be repeated for credit; cumulative maximum 6 hours. For K-12 teachers. Knowledge of special student populations and guidance in developing appropriate curricula.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 523 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 524 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 525 Classroom Management Seminar V 2-3** Course Prerequisite: For candidates admitted to MIT. Contemporary issues in management of elementary, middle school, and secondary classrooms; issues of abuse.
- 526 Research in Multicultural Education 3** Course Prerequisite: TCH LRN 515. Research and instructional practices focusing on multicultural education.
- 527 Seminar in Teacher Education Instruction 1** May be repeated for credit; cumulative maximum 4 hours. Teacher preparation program components and rationale, university teaching strategies, and evaluation methods.

- 528 Literacy within the Disciplines 3** Explores literacy research and practices that enhance the learning of various disciplines taught in K-12 settings.
- 529 Place-Based Education 3** Theory and practice of place-based education with an emphasis on community-based action research and curriculum planning.
- 530 Innovations in Reading V 2-3** Graduate-level counterpart of TCH LRN 431; additional requirements.
- 531 Frameworks for Research in Mathematics and Science Education 3** Exploration of research frameworks and methodologies specific to mathematics and science education.
- 532 Children's Literature in the Curriculum 2** Theory and classroom applications for selecting and using literature and storytelling in content areas; reading, writing, language development, the arts.
- 533 Middle Level Mathematics Pedagogy and Philosophy 3** Middle-school philosophy; understanding of effective standards and research-based instructional methods.
- 534 Conceptualization of Proportional Thinking 3** Investigation of the development of K-14 students' understanding of proportional reasoning.
- 535 Gender, Power and Education 3** Interdisciplinary focus on the relationships among gender, power and education.
- 536 Cultural Studies in Education 3** Historical and conceptual background of the field of cultural studies.
- 537 Seminar in Language, Literacy, and Culture 3** Interrelationships between schools, literacy, and student cultural background.
- 538 Writing Across the Curriculum 3** Writing for learning at grade levels K-12.
- 539 Innovations in Language Arts 3** The most recent developments in language arts instruction for pre-service and in-service teachers K-12.
- 540 Elementary School Social Studies 3** Course Prerequisite: For candidates admitted to MIT. For candidates admitted to graduate teacher preparation and experienced teachers. Elementary structures of various social sciences; research findings related to instruction; classroom applications and materials.
- 541 Teacher Professional Certification: Pre-Assessment Seminar V 1-3** May be repeated for credit; cumulative maximum 6 hours. Candidates evaluate current teaching against standards to determine steps for professional growth plans which measure positive impact on student learning.
- 542 Teacher Professional Certification: Researching Exemplary Practices V 1-3** May be repeated for credit; cumulative maximum 6 hours. Teachers will apply exemplary practices, continue to assess their performance and college evidence of positive impact on student learning.
- 543 Teacher Professional Certification: Culminating Seminar V 1-3** May be repeated for credit; cumulative maximum 6 hours. Candidates will complete ProCert requirements to document positive impact on students' learning; set new goals; learn about National Board options.
- 544 Advanced Children's Literature 3** Trends, issues, and research in children's literature.
- 546 Teaching Writing in the Elementary School 3** Theory and research relevant to instructional approaches and practices for teaching writing in elementary schools.
- 547 Teaching Folk Literature to Children and Adolescents 3** Folk literature as a genre in child and adolescent literature; curriculum applications; reading, language development, social studies, creative expression.
- 548 Teaching Adolescent Literature 3** Evaluating, selecting, and using literature for middle school and teenage students.
- 549 Communicating in a Multilingual Society 3** Study of language in social and educational context and its relation to cultural and linguistic diversity. Recommended preparation: TCH LRN 510.
- 550 Second Language Learning and Literacy 3** Research on second language teaching and learning in literacy education with a focus on English language learners in US schools. Recommended preparation: Admission to a doctoral program.
- 551 Psychology of Reading V 2-3** Psychological, perceptual, motivational, developmental and physiological aspects of reading.
- 552 Literacy Development I 3** Course Prerequisite: For candidates admitted to MIT. For candidates admitted to graduate teacher preparation. Review of current research and approaches to instruction in the development of literacy in elementary and middle grades.
- 553 Assessment and Instruction for Reading: K-8 4 (3-3)** Evaluation techniques and instructional practices for impacting the reading achievement of K-8 students.
- 554 Sociolinguistics 3** Interaction between language use and sociopolitical and cultural contexts; cultural and linguistic delivery and educational opportunity. Recommended preparation: TCH LRN 504.
- 555 Seminar in Literacy Development 3** May be repeated for credit; cumulative maximum 6 hours. Current and historical research in reading/language arts, infancy through college and adult years; papers presented by faculty, invited speakers, and students.
- 556 Literacy Development II 3** Course Prerequisite: For candidates admitted to MIT. Review of current research and approaches to instruction in the development of literacy in elementary and middle grades.
- 557 Research in Reading 3** Exploration of qualitative and quantitative reading research covering topics of current and historical importance.
- 558 Improving Comprehension through Literature 3** Key theoretical concepts and their implications for improved comprehension instruction, using children's literature.
- 559 Readings in Cultural Studies and Social Thought in Education 1** May be repeated for credit; cumulative maximum 3 hours. Current scholarship in the field of cultural studies in education and practices of schools.
- 560 Research in Teaching 3** May be repeated for credit; cumulative maximum 6 hours. Recent developments in research on teaching; both quantitative and qualitative research methodologies emphasized.

- 561 Elementary School Mathematics 3** Course Prerequisite: For candidates admitted to MIT. Research on curriculum and instruction issues in elementary school mathematics.
- 564 Elementary School Mathematics Methods 3** Course Prerequisite: For candidates admitted to MIT. Introduction to research, theory, and methods of teaching K-8 mathematics; emphasis on integrating theory and practice.
- 565 Introduction to Scholarly Inquiry 1** Introduction to the Ed.M program including the scholarship and research requirements and the role of students and action research.
- 566 Democratic Education 3** Rationale and skill to assist teachers in making classrooms more democratic.
- 567 Social Foundations of Literacy 3** Social, cultural and political factors which influence the acquisition and use of literacy. Recommended preparation: Admission to a doctoral program.
- 568 Psychological Foundations and Assessment of Literacy 3** Historical look that blends the assessment of literacy and its psychological components. Recommended preparation: Admission to a doctoral program.
- 569 Critical Analysis of Children's and Young Adult Literature 3** Multicultural analysis of children's and adolescent literature and its pedagogical and sociopolitical implications and possibilities. Recommended preparation: Admission to a doctoral program.
- 570 Theory and Research in Electronic Literacies 3** . Ideas of literacy and effects of technology on literacy and policy, particularly those issues addressing diverse learners.
- 571 Elementary School Science 3** Course Prerequisite: For candidates admitted to MIT. Theories and research underlying science programs with classroom implications.
- 572 Elementary School Science Methods 3** Course Prerequisite: For candidates admitted to MIT. Theoretical base to design and implement appropriate standards-based elementary science instruction.
- 573 Theory and Research in Computer-Assisted Language Learning 3** Information and tools needed to contribute to the CALL research literature.
- 574 Science for All: An Individual and Multicultural Perspective 3** Course Prerequisite: For candidates admitted to MIT. Implications of cultural and individual diversity for understanding western scientific and mathematical thought; an activity-based, educational perspective.
- 575 Globalization and Identity in Education 3** Issues relating to the complexities of globalization and identity in education.
- 576 Youth Cultures in Education 3** Analysis of how youth cultures operate in society and how they are practiced in schools.
- 577 Curriculum Theory 3** Curriculum theory as the interdisciplinary study of educational experience.
- 578 National Board for Professional Teaching Standards (NBPTS) I 3** Development of evidence aligned with National Board standards and allowance for reflection on the impact of teaching and student learning. Required background must include: Bachelor's degree from accredited institution, valid state teaching/counseling certificate, completion of minimum 3 years successful full-time teaching in a U.S. P-12 school.
- 579 National Board for Professional Teaching Standards (NBPTS) II 3** Construct/submit portfolio of evidence meeting national standards in classrooms for National Board Certification assessment. Required background must include: Bachelor's degree from accredited institution, valid state teaching/counseling certificate, completion of minimum 3 years successful full-time teaching in a U.S. P-12 school.
- 580 Multicultural Education in a Global Society 3** Multicultural and multilingual education from a global perspective; development of multicultural curriculum. Credit not granted for more than one of TCH LRN 480, 580, 582. Credit not granted for both TCH LRN 480 and TCH LRN 580.
- 581 Learning and Development in Mathematics and Science 3** This course explores and illustrates what we know about various aspects of mathematical learning at various grade levels.
- 583 Problem Solving in Elementary and Middle Level Education 3** Course Prerequisite: For candidates admitted to MIT. Integration of knowledge and skills to address complex cases in teaching and learning.
- 584 Research in Teaching Mathematics and Science 3** Development of an understanding for the research literature that is particularly related to mathematics and science teaching.
- 585 Focused Reading and Conference in Math/Science Education V 1-3** May be repeated for credit; cumulative maximum 9 hours. Designed to foster ongoing scholarship for individuals interested in mathematics and/or science educational research.
- 587 Environment, Culture and Education 3** Role of education in the social, ecological, and political conflicts between culture and environment.
- 588 Action Research: Teachers as Research 3** Theoretical concepts, research, issues, models, and strategies for implementation of action research.
- 589 Race, Identity and Representation in Education 3** Interdisciplinary research in race, identity and representations in education.
- 590 Internship V 2-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Opportunities in professional positions.
- 591 Research Internship in Math/Science Education 3** May be repeated for credit; cumulative maximum 6 hours. Provides opportunities for students to work closely with an accomplished researcher to observe, learn, and practice research methods.
- 592 Social Theory in Education 3** Social theory and how it applies to intellectual work in education. Recommended preparation: Admission to a doctoral program.
- 593 Pre-internship and Seminar 2 (1-3)** Course Prerequisite: For candidates admitted to MIT. Instructional practice in diverse classroom settings and reflection on that practice.
- 594 Integrating Fine Arts into K-8 Curriculum 2** Course Prerequisite: For candidates admitted to MIT. Integrating Fine Arts (art, music, dance, drama) into K-8 curriculum; designed for pre-service MIT.
- 595 Internship and Seminar 10 (1-27)** Course Prerequisite: TCH LRN 593. Instructional practice in classroom settings, reflection on practice; professional certification.

- 596 Topics in In-Service Education V 1-3** May be repeated for credit; cumulative maximum 12 hours. Advanced study of research, practice, and contemporary issues in education.
- 597 Topics in In-Service Education V 1-3** May be repeated for credit; cumulative maximum 9 hours. New developments and applications on selected in-service and staff development topics.
- 598 Research Seminar in Mathematics and Science Education 1** May be repeated for credit; cumulative maximum 4 hours. Through targeted readings and discussion, students will develop knowledge base proficiencies related to areas of mathematics/science education.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D) – Educational Administration

Degree offered: Doctor of Philosophy (Education)

Faculty working with graduate students: 15

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Not Accepting Applications

WSU is not accepting applications for this degree at this time.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and

Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The education administration program offers graduate studies at the master's and doctoral levels, plus administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer a specialization in K-12 educational leadership. Program faculty provide a balance and integration of practical experience, theory, and research and aim to prepare educational leaders who function as scholar-practitioners. All campuses offer the educational leadership master's degrees, certification programs, and access to the state-wide doctor of education degree; one-year residency is required for the doctor of philosophy degree. The University's educational leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. The administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. The goal of these standards and our programs is to prepare educational leaders who can provide effective leadership to promote learning for all children in K-12 schools. Washington State University's innovative field-based principal and superintendent certification programs serve certification candidates in a cohort-based program that promotes a close professional network.

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Paul Goldman, James Howard, Kristin Huggins, Joan Kingrey, Chad Lochmiller, Forrest Parkay, Paul Pitre, Dennis Ray, Nancy Sanders, Gay Selby, Gene Sharratt and Danny Talbot.

ED AD

- 501 **Philosophy of Education** 3 Development of American educational philosophy.
- 503 **Values and Ethics for Educational Leaders** 3 Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 **Social Context of Education** 2 The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 **Social Foundations of Education** 3 Educational adaptations to the economic and social trends and forces.
- 510 **Improvement of Instruction** 3 Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 **Leadership Studies for Social Justice** 3 Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 **Organizational Behavior** 3 Human behavior within various social and cultural organizational settings.
- 514 **Basic Principles of Curriculum Design** V 2-3 The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 **Curriculum Implementation** 3 Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 **Instructional and Curricular Leadership** V 2-3 Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 **Media Literacy and Educational Technology** 3 Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 **Seminar in Curriculum and Instruction** V 2-3 Contemporary issues, analyses and developments of educational programs.

- 521 **Topics in Education** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 **Topics in Education** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 **Introduction to Qualitative Research in Education** 3 Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 **Advanced Qualitative Research in Education** 3 Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 **Special Topics in Qualitative Research in Education** V 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 **Applied Research for Educational Leaders** 3 Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 **Student Personnel Services in Higher Education** V 2-3 Philosophy, structure, functions, and organization of student affairs administration.
- 561 **Introduction to College Student Development** 3 Student development theory, related research and the application of theory to practice in student affairs work.
- 562 **Professional Issues in Student Affairs Administration** 3 Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 **Research in College Student Development** 3 Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 **Practicum in Higher Education** 3 (0-9) Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.

- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.

- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D.) – Educational Administration

Degree offered: Master of Arts in Education

Faculty working with graduate students: 15

Program offered: Pullman, Tri-Cities

Deadline: Fall: January 10

Spring: September 1

Not Accepting Applications

WSU is not accepting applications for this degree at this time.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman

campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The education administration program offers graduate studies at the master's and doctoral levels, plus administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer a specialization in K-12 educational leadership. Program faculty provide a balance and integration of practical experience, theory, and research and aim to prepare educational leaders who function as scholar-practitioners. All campuses offer the educational leadership master's degrees, certification programs, and access to the state-wide doctor of education degree; one-year residency is required for the doctor of philosophy degree. The University's educational leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. The administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. The goal of these standards and our programs is to prepare educational leaders who can provide effective leadership to promote learning for all children in K-12 schools. Washington State University's innovative field-based principal and superintendent certification programs serve certification candidates in a cohort-based program that promotes a close professional network.

Faculty

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Paul Goldman, James Howard, Kristin Huggins, Joan Kingrey, Chad Lochmiller, Forrest Parkay, Paul Pitre, Dennis Ray, Nancy Sanders, Gay Selby, Gene Sharratt and Danny Talbot.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.

- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.

- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D.) – Educational Administration

Degree offered: Master of Education

Faculty working with graduate students: 15

Program offered: Pullman, Tri-Cities, Vancouver

Deadline: Fall: January 10

Spring: September 1

Not Accepting Applications

WSU is not accepting applications for this degree at this time.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman

campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The education administration program offers graduate studies at the master's and doctoral levels, plus administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer a specialization in K-12 educational leadership. Program faculty provide a balance and integration of practical experience, theory, and research and aim to prepare educational leaders who function as scholar-practitioners. All campuses offer the educational leadership master's degrees, certification programs, and access to the state-wide doctor of education degree; one-year residency is required for the doctor of philosophy degree. The University's educational leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. The administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. The goal of these standards and our programs is to prepare educational leaders who can provide effective leadership to promote learning for all children in K-12 schools. Washington State University's innovative field-based principal and superintendent certification programs serve certification candidates in a cohort-based program that promotes a close professional network. 4000 Character Limit. 4000 Character Limit.

Faculty

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Paul Goldman, James Howard, Kristin Huggins, Joan Kingrey, Chad Lochmiller, Forrest Parkay, Paul Pitre, Dennis Ray, Nancy Sanders, Gay Selby, Gene Sharratt and Danny Talbot.

ED AD

- 501 **Philosophy of Education 3** Development of American educational philosophy.
- 503 **Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 **Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 **Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 **Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 **Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 **Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 **Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 **Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 **Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 **Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 **Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.

- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.

- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D) – Educational Leadership

Degree offered: Doctor of Education

Faculty working with graduate students: 11

Graduate students: 64

Program offered: Pullman, Spokane, Tri-Cities, Vancouver

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

Courses are sequenced to allow students at all campuses to complete program requirements within a four-year time frame (contingent upon successful completion of dissertation research). In addition to program offerings at the regional campuses, students attend two-week summer institutes at the Pullman campus for two consecutive summers, after completion of at least 12 graded credit hours including a research methods course (typically EdRes 563). The purpose of the summer institutes is to build a learning community and support network among the statewide cohort, and to form inquiry groups that will focus dissertation research on common problems of leadership for school improvement. During the third or fourth year of the program, students fulfill the program's residency requirements by enrolling full-time (10-18 credits) in dissertation research (EdAd 800).

Program Description

WSU's Educational Leadership program offers graduate studies at

the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The Statewide Doctor of Education (Ed.D.) program is designed as a modified cohort-based program, offered through all WSU campuses. Students in all regions of the state follow the same application process for admission; once admitted, students may access course offerings and advisement through any of WSU's campuses. Courses are sequenced to allow students at all campuses to complete program requirements within a four-year time frame (contingent upon successful completion of dissertation research). In addition to program offerings at the regional campuses, students attend two-week summer institutes at the Pullman campus for two consecutive summers. The purpose of the summer institutes is to build a learning community and support network among the statewide cohort, and to form inquiry groups that will focus dissertation research on common problems of leadership for school improvement.

Post-Graduate Employment Opportunities

K-12 district leadership positions, leadership in public administration or non-profit agencies

Post-Graduate Career Placements

K-12 superintendent, K-12 school district administrator

- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.

- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDRES

- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.

- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.
- Teaching and Learning**
- T & L**
- 501 Bilingual/ESL Education 3** May be repeated for credit; cumulative maximum 6 hours. Work with students from diverse linguistic and cultural backgrounds in educational settings.
- 502 Assessment for Teaching and Learning V 2-3** Instruction in sound assessment practices for preservice and inservice graduate students.
- 503 ESL Methods and Material for Secondary Content Teachers 2** Research-based ESL strategies and methods for pre-service and secondary content area teachers.
- 504 Advanced Study in Linguistics for Educators 3** Use of linguistics to better understand second language learning and teaching and the physical aspects of acquiring a language.
- 505 ESL Methods for General Educators (K-8) 2** Course Prerequisite: For candidates admitted to MIT. Research-based ESL strategies and methods for pre-service and experienced teachers.
- 506 Multicultural Classroom Instruction and Management 4** Instructional and management strategies for maximizing students' opportunities to learn in a multicultural setting.
- 507 Seminar in Literacy in Multicultural Settings I 3** Multicultural perspective to curriculum development and classroom literacy practices.
- 508 Seminar in Literacy in Multicultural Settings II 3** Course Prerequisite: TCH LRN 507. Multicultural perspective to curriculum development and classroom literacy practices.
- 509 Research in Curriculum and Assessment for Bilingual/ESL Education 3** Research in curriculum development for and assessment of language minority students. Recommended preparation: TCH LRN 510; TCH LRN 549.
- 510 Theoretical Foundations of Bilingual/ESL Education 3** Theoretical foundations related to research and instructional strategies for effective schooling of language minority students. Credit not granted for TCH LRN 410 and 510. Credit not granted for both TCH LRN 410 and TCH LRN 510.
- 512 Language and Cultural Factors in Mathematics 3** Research and instructional strategies related to linguistic and cultural influences on learning math.
- 513 Seminar in Middle School Education 3** For experienced teachers. Curriculum patterns and recent research regarding instruction and materials in the contemporary middle school.
- 514 Methods and Materials for Bilingual/ESL Education 3** Research and instructional methods related to English language acquisition across content areas. Credit not granted for both TCH LRN 414 and TCH LRN 514. Recommended preparation: Recommended: TCH LRN 410 or 510; TCH LRN 509; TCH LRN 549.
- 515 The Education of Cultural and Linguistic Minority Students 3** Issues in the education of language minority students.
- 516 Advanced Study in Computer-Assisted Language Learning 3** Research, theory, and practice in computer-assisted language learning.
- 517 Educational Technology in K-8 Schools 2 (1-2)** Course Prerequisite: For candidates admitted to MIT. Technology standards for teachers, technology use in schools, production techniques and instructional methods.
- 518 Integrating Technology into the Curriculum 3** Examination and articulation of the potential for new technologies to expand learning opportunities.
- 519 Instructional Media Production I 3** Instructional media development, emphasizing the theory and methods of instructional design, digital media production and evaluation.
- 520 Topics in Special Student Populations V 1-4** May be repeated for credit; cumulative maximum 6 hours. For K-12 teachers. Knowledge of special student populations and guidance in developing appropriate curricula.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.

- 522 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 523 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 524 Topics in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent research, development, issues, and/or applications in selected areas of education.
- 525 Classroom Management Seminar V 2-3** Course Prerequisite: For candidates admitted to MIT. Contemporary issues in management of elementary, middle school, and secondary classrooms; issues of abuse.
- 526 Research in Multicultural Education 3** Course Prerequisite: TCH LRN 515. Research and instructional practices focusing on multicultural education.
- 527 Seminar in Teacher Education Instruction 1** May be repeated for credit; cumulative maximum 4 hours. Teacher preparation program components and rationale, university teaching strategies, and evaluation methods.
- 528 Literacy within the Disciplines 3** Explores literacy research and practices that enhance the learning of various disciplines taught in K-12 settings.
- 529 Place-Based Education 3** Theory and practice of place-based education with an emphasis on community-based action research and curriculum planning.
- 530 Innovations in Reading V 2-3** Graduate-level counterpart of TCH LRN 431; additional requirements.
- 531 Frameworks for Research in Mathematics and Science Education 3** Exploration of research frameworks and methodologies specific to mathematics and science education.
- 532 Children's Literature in the Curriculum 2** Theory and classroom applications for selecting and using literature and storytelling in content areas; reading, writing, language development, the arts.
- 533 Middle Level Mathematics Pedagogy and Philosophy 3** Middle-school philosophy; understanding of effective standards and research-based instructional methods.
- 534 Conceptualization of Proportional Thinking 3** Investigation of the development of K-14 students' understanding of proportional reasoning.
- 535 Gender, Power and Education 3** Interdisciplinary focus on the relationships among gender, power and education.
- 536 Cultural Studies in Education 3** Historical and conceptual background of the field of cultural studies.
- 537 Seminar in Language, Literacy, and Culture 3** Interrelationships between schools, literacy, and student cultural background.
- 538 Writing Across the Curriculum 3** Writing for learning at grade levels K-12.
- 539 Innovations in Language Arts 3** The most recent developments in language arts instruction for pre-service and in-service teachers K-12.
- 540 Elementary School Social Studies 3** Course Prerequisite: For candidates admitted to MIT. For candidates admitted to graduate teacher preparation and experienced teachers. Elementary structures of various social sciences; research findings related to instruction; classroom applications and materials.
- 541 Teacher Professional Certification: Pre-Assessment Seminar V 1-3** May be repeated for credit; cumulative maximum 6 hours. Candidates evaluate current teaching against standards to determine steps for professional growth plans which measure positive impact on student learning.
- 542 Teacher Professional Certification: Researching Exemplary Practices V 1-3** May be repeated for credit; cumulative maximum 6 hours. Teachers will apply exemplary practices, continue to assess their performance and college evidence of positive impact on student learning.
- 543 Teacher Professional Certification: Culminating Seminar V 1-3** May be repeated for credit; cumulative maximum 6 hours. Candidates will complete ProCert requirements to document positive impact on students' learning: set new goals; learn about National Board options.
- 544 Advanced Children's Literature 3** Trends, issues, and research in children's literature.
- 546 Teaching Writing in the Elementary School 3** Theory and research relevant to instructional approaches and practices for teaching writing in elementary schools.
- 547 Teaching Folk Literature to Children and Adolescents 3** Folk literature as a genre in child and adolescent literature; curriculum applications; reading, language development, social studies, creative expression.
- 548 Teaching Adolescent Literature 3** Evaluating, selecting, and using literature for middle school and teenage students.
- 549 Communicating in a Multilingual Society 3** Study of language in social and educational context and its relation to cultural and linguistic diversity. Recommended preparation: TCH LRN 510.
- 550 Second Language Learning and Literacy 3** Research on second language teaching and learning in literacy education with a focus on English language learners in US schools. Recommended preparation: Admission to a doctoral program.
- 551 Psychology of Reading V 2-3** Psychological, perceptual, motivational, developmental and physiological aspects of reading.
- 552 Literacy Development I 3** Course Prerequisite: For candidates admitted to MIT. For candidates admitted to graduate teacher preparation. Review of current research and approaches to instruction in the development of literacy in elementary and middle grades.
- 553 Assessment and Instruction for Reading: K-8 4 (3-3)** Evaluation techniques and instructional practices for impacting the reading achievement of K-8 students.
- 554 Sociolinguistics 3** Interaction between language use and sociopolitical and cultural contexts; cultural and linguistic delivery and educational opportunity. Recommended preparation: TCH LRN 504.

- 555 Seminar in Literacy Development 3** May be repeated for credit; cumulative maximum 6 hours. Current and historical research in reading/language arts, infancy through college and adult years; papers presented by faculty, invited speakers, and students.
- 556 Literacy Development II 3** Course Prerequisite: For candidates admitted to MIT. Review of current research and approaches to instruction in the development of literacy in elementary and middle grades.
- 557 Research in Reading 3** Exploration of qualitative and quantitative reading research covering topics of current and historical importance.
- 558 Improving Comprehension through Literature 3** Key theoretical concepts and their implications for improved comprehension instruction, using children's literature.
- 559 Readings in Cultural Studies and Social Thought in Education 1** May be repeated for credit; cumulative maximum 3 hours. Current scholarship in the field of cultural studies in education and practices of schools.
- 560 Research in Teaching 3** May be repeated for credit; cumulative maximum 6 hours. Recent developments in research on teaching; both quantitative and qualitative research methodologies emphasized.
- 561 Elementary School Mathematics 3** Course Prerequisite: For candidates admitted to MIT. Research on curriculum and instruction issues in elementary school mathematics.
- 564 Elementary School Mathematics Methods 3** Course Prerequisite: For candidates admitted to MIT. Introduction to research, theory, and methods of teaching K-8 mathematics; emphasis on integrating theory and practice.
- 565 Introduction to Scholarly Inquiry 1** Introduction to the Ed.M program including the scholarship and research requirements and the role of students and action research.
- 566 Democratic Education 3** Rationale and skill to assist teachers in making classrooms more democratic.
- 567 Social Foundations of Literacy 3** Social, cultural and political factors which influence the acquisition and use of literacy. Recommended preparation: Admission to a doctoral program.
- 568 Psychological Foundations and Assessment of Literacy 3** Historical look that blends the assessment of literacy and its psychological components. Recommended preparation: Admission to a doctoral program.
- 569 Critical Analysis of Children's and Young Adult Literature 3** Multicultural analysis of children's and adolescent literature and its pedagogical and sociopolitical implications and possibilities. Recommended preparation: Admission to a doctoral program.
- 570 Theory and Research in Electronic Literacies 3** Ideas of literacy and effects of technology on literacy and policy, particularly those issues addressing diverse learners.
- 571 Elementary School Science 3** Course Prerequisite: For candidates admitted to MIT. Theories and research underlying science programs with classroom implications.
- 572 Elementary School Science Methods 3** Course Prerequisite: For candidates admitted to MIT. Theoretical base to design and implement appropriate standards-based elementary science instruction.
- 573 Theory and Research in Computer-Assisted Language Learning 3** Information and tools needed to contribute to the CALL research literature.
- 574 Science for All: An Individual and Multicultural Perspective 3** Course Prerequisite: For candidates admitted to MIT. Implications of cultural and individual diversity for understanding western scientific and mathematical thought; an activity-based, educational perspective.
- 575 Globalization and Identity in Education 3** Issues relating to the complexities of globalization and identity in education.
- 576 Youth Cultures in Education 3** Analysis of how youth cultures operate in society and how they are practiced in schools.
- 577 Curriculum Theory 3** Curriculum theory as the interdisciplinary study of educational experience.
- 578 National Board for Professional Teaching Standards (NBPTS) I 3** Development of evidence aligned with National Board standards and allowance for reflection on the impact of teaching and student learning. Required background must include: Bachelor's degree from accredited institution, valid state teaching/counseling certificate, completion of minimum 3 years successful full-time teaching in a U.S. P-12 school.
- 579 National Board for Professional Teaching Standards (NBPTS) II 3** Construct/submit portfolio of evidence meeting national standards in classrooms for National Board Certification assessment. Required background must include: Bachelor's degree from accredited institution, valid state teaching/counseling certificate, completion of minimum 3 years successful full-time teaching in a U.S. P-12 school.
- 580 Multicultural Education in a Global Society 3** Multicultural and multilingual education from a global perspective; development of multicultural curriculum. Credit not granted for more than one of TCH LRN 480, 580, 582. Credit not granted for both TCH LRN 480 and TCH LRN 580.
- 581 Learning and Development in Mathematics and Science 3** This course explores and illustrates what we know about various aspects of mathematical learning at various grade levels.
- 583 Problem Solving in Elementary and Middle Level Education 3** Course Prerequisite: For candidates admitted to MIT. Integration of knowledge and skills to address complex cases in teaching and learning.
- 584 Research in Teaching Mathematics and Science 3** Development of an understanding for the research literature that is particularly related to mathematics and science teaching.
- 585 Focused Reading and Conference in Math/Science Education V 1-3** May be repeated for credit; cumulative maximum 9 hours. Designed to foster ongoing scholarship for individuals interested in mathematics and/or science educational research.
- 587 Environment, Culture and Education 3** Role of education in the social, ecological, and political conflicts between culture and environment.
- 588 Action Research: Teachers as Research 3** Theoretical concepts, research, issues, models, and strategies for implementation of action research.

- 589 Race, Identity and Representation in Education 3** Interdisciplinary research in race, identity and representations in education.
- 590 Internship V 2-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Opportunities in professional positions.
- 591 Research Internship in Math/Science Education 3** May be repeated for credit; cumulative maximum 6 hours. Provides opportunities for students to work closely with an accomplished researcher to observe, learn, and practice research methods.
- 592 Social Theory in Education 3** Social theory and how it applies to intellectual work in education. Recommended preparation: Admission to a doctoral program.
- 593 Pre-Internship and Seminar 2 (1-3)** Course Prerequisite: For candidates admitted to MIT. Instructional practice in diverse classroom settings and reflection on that practice.
- 594 Integrating Fine Arts into K-8 Curriculum 2** Course Prerequisite: For candidates admitted to MIT. Integrating Fine Arts (art, music, dance, drama) into K-8 curriculum; designed for pre-service MIT.
- 595 Internship and Seminar 10 (1-27)** Course Prerequisite: TCH LRN 593. Instructional practice in classroom settings, reflection on practice; professional certification.
- 596 Topics in In-Service Education V 1-3** May be repeated for credit; cumulative maximum 12 hours. Advanced study of research, practice, and contemporary issues in education.
- 597 Topics in In-Service Education V 1-3** May be repeated for credit; cumulative maximum 9 hours. New developments and applications on selected in-service and staff development topics.
- 598 Research Seminar in Mathematics and Science Education 1** May be repeated for credit; cumulative maximum 4 hours. Through targeted readings and discussion, students will develop knowledge base proficiencies related to areas of mathematics/science education.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D) – Educational Leadership

Degree offered: Doctor of Philosophy (Education)

Faculty working with graduate students: 11

Graduate students: 4

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Requirements

The program of study for the Ph.D. with a Specialization in Educational Leadership requires a total of 72 semester hours, including at least 36 semester hours of graded course work and at least 24 semester hours of EdAd 800 for completion and defense of the doctoral dissertation. In addition to core courses in Educational Leadership, a cognate area of at least 9 semester hours of graded coursework is required; the cognate may consist of a special emphasis within the College of Education (e.g., educational psychology or cultural studies) or outside the College of Education (e.g., anthropology, economics, health policy administration, political science, public administration). The Ph.D. dissertation requires the completion of an original, empirical research study that makes a contribution to scholarship in the field of leadership studies. A one-year residency of full-time enrollment (a minimum of 10 credits for 2 consecutive semesters) is required for the Ph.D. with a specialization in Educational Leadership. Most courses for the degree are offered at all WSU campuses.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational lead-

ership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The program for the Doctor of Philosophy (Ph.D.) in Education with a specialization in Educational Leadership is intended to prepare scholars and researchers and focuses on developing and applying theoretical and research knowledge and skills to the field of leadership studies. The Ph.D. program is designed primarily for students who intend to pursue careers in policy, research, or college and university teaching. It may also be appropriate for students who are interested in careers in k-20 education or related fields, though it is more theory and research oriented than the Doctor of Education (Ed.D.) degree.

Post-Graduate Employment Opportunities

University research faculty.

Post-Graduate Career Placements

University research faculty, community college dean

Faculty

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Kristin Huggins, Joan Kingrey, Teena McDonald, Xyanthe Neider, Forrest Parkay, Gay Selby, Danny Talbot and Kelly Ward.

ED AD

- 501 **Philosophy of Education** 3 Development of American educational philosophy.
- 503 **Values and Ethics for Educational Leaders** 3 Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 **Social Context of Education** 2 The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 **Social Foundations of Education** 3 Educational adaptations to the economic and social trends and forces.

- 510 **Improvement of Instruction** 3 Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 **Leadership Studies for Social Justice** 3 Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 **Organizational Behavior** 3 Human behavior within various social and cultural organizational settings.
- 514 **Basic Principles of Curriculum Design** V 2-3 The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 **Curriculum Implementation** 3 Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 **Instructional and Curricular Leadership** V 2-3 Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 **Media Literacy and Educational Technology** 3 Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 **Seminar in Curriculum and Instruction** V 2-3 Contemporary issues, analyses and developments of educational programs.
- 521 **Topics in Education** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 **Topics in Education** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 **Special Topics** 1 May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 **Introduction to Qualitative Research in Education** 3 Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 **Advanced Qualitative Research in Education** 3 Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 **Special Topics in Qualitative Research in Education** V 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.

- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDPSY

- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDRES

- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.

- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

Doctor of Education (Ed.D) – Educational Leadership

Degree offered: Master of Arts in Education

Faculty working with graduate students: 11

Graduate students: 4

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Requirements

The Program for the M.A. requires a minimum of 30 semester hours, including at least 21 hours of graded coursework and 4 hours of EdAd 700 for completion and defense of the master's thesis. At least 18 hours of the graded coursework must be in the Educational Leadership program.

Program Description

WSU's Educational Leadership program offers graduate studies at

the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The Educational Leadership Master of Arts in Education (M.A.), a thesis degree designed for professional educators who plan to subsequently pursue a research-based doctoral program (Ph.D.). It is offered only on the Pullman campus and is closely aligned with the Principal and Program Administrator Certification program.

Post-Graduate Employment Opportunities

K-12 administrator, preparation for advanced graduate study, administration in public or non-profit agency, leadership positions in higher education

Post-Graduate Career Placements

K-12 school district program administrator, principal, teacher, and higher education administration

Faculty

Michele Acker-Hocevar, Gail Furman, Gordon Gates, Kristin Huggins, Joan Kingrey, Teena McDonald, Xyanthe Neider, Forrest Parkay, Gay Selby, Danny Talbot and Kelly Ward.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.

- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).

- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Doctor of Education (Ed.D) – Educational Leadership

Degree offered: Master of Education

Faculty working with graduate students: 11

Graduate students: 68

Program offered: Pullman, Spokane, Tri-Cities, Vancouver

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Requirements

The Master of Education (Ed.M.) is a non-thesis degree, the Program of Study requires a minimum of 35 semester hours, including at least 33 hours of graded coursework and 2 hours of EdAd 702 for completion of a master's comprehensive examination.

Program Description

WSU's Educational Leadership program offers graduate studies at the Master's and doctoral levels and administrator certification programs for the superintendent, residency principal, and residency program administrator certificates. The Master's (M.A. and Ed.M.) and doctoral (Ed.D. and Ph.D.) degree programs offer specializations in educational leadership. Program faculty are dedicated to meeting students' needs as current and future educational leaders and to preparing future professors for work in academia. The program provides a balance and integration of practical experience, theory, and research and aims to prepare educational leaders who function as scholar-practitioners. Educational leadership programs are offered at all of WSU's campuses (Pullman, Spokane, Tri-Cities, and Vancouver). All campuses offer the Educational Leadership Master's degrees, certification programs, and access to the statewide doctor of education degree (Ed.D.). One-year residency at the Pullman campus is required for the doctor of philosophy degree (Ph.D.). WSU's Educational Leadership program is one of 70 doctoral-granting programs nationwide selected for membership in the University Council for Educational Administration, a national consortium dedicated to the improvement of educational leadership preparation and practice. WSU's graduate students have the opportunity to participate in UCEA's annual convention and other professional activities. WSU's administrator certification

programs are organized around the national ISLLC (Interstate School Leaders Licensure Consortium) standards, which have been adopted as the certification standards for Washington State licensure. WSU's innovative cohort-based and field-based certification programs for principals and superintendents promote a close professional network. Faculty members for certification programs have extensive experience as school principals and/or central office administrators.

Degree Description

The Educational Leadership Master of Education (Ed.M.) is a non-thesis degree program designed for professional educators preparing for leadership positions in K-12 schools. It is offered at all four WSU campuses (Pullman, Spokane, Tri-Cities and Vancouver) and is closely aligned with the Principal and Program Administrator Certification program. Models for delivery of the master's program (e.g., sequencing of courses) differ slightly across the four campuses, although basic requirements for the degree are the same across the campuses.

Post-Graduate Employment Opportunities

K-12 administrator, preparation for advanced graduate study, administration in public or non-profit agency

Post-Graduate Career Placements

K-12 school district program administrator, principal, and teacher

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.

- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.

- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.

- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Early Childhood Leadership and Administration – Cert in Early Childhood Ldr Adm

Degree offered: Graduate Certificate in Early Childhood Leadership and Administration

Not Accepting Applications

WSU is not accepting applications for this degree at this time.

Requirements

Please see the program/department for more information.

Economics

Degree offered: Doctor of Philosophy (Economics)

Faculty working with graduate students: 24

Graduate students: 68

Graduate students receiving assistantships or scholarships: 44%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), TOEFL

Deadline: Fall: January 10

Requirements

Must successfully complete three preliminary core exams (end of first year) Written Doctoral Examination Must complete two fields must complete one additional course elective

Program Description

The PhD in Economics is designed to prepare students for careers as professional economists in academia, government, and the private sector.

Degree Description

The PhD in Economics is designed to prepare students for careers as professional economists in academia, government, and the private sector. The program is structured so that a student with a Bachelor of Arts degree in Economics and an appointment as a graduate assistant should be able to complete the required coursework within three academic years, excluding summer sessions. Students with a Master of Arts in Applied Economics degree may be able to complete the required coursework in less time, depending on the content and quality of the previous work. The length of time required to complete the dissertation varies greatly but students usually complete the entire program, including the dissertation, within four years.

Training and Professional Development Opportunities

None

Post-Graduate Employment Opportunities

Professional Economists in academia, government, and the private sector

Post-Graduate Career Placements

Health Research Scientist, Texas A&M Assistant Professor, Eastern Washington University Economist and Research Fellow, Center for Disease Control in Atlanta

Faculty

Raymond Batina, Michael Brady, Kenneth Casavant, Andrew Cassey, Hayley Chouinard, Benjamin Cowan, Ana Espinola-Arredondo, T Fortenbery, Gregmar Galinato, Rosa Gallardo, Mark Gibson, Bidisha Mandal, Thomas Marsh, Jill McCluskey, Vicki McCracken, R Mittelhammer, Felix Munoz-Garcia, Joseph Neibergs, Robert Rosenman, Jeremy Sage, C Shumway, Philip Wandschneider, Jia Yan and Jonathan Yoder.

ECONS

- 500 Macroeconomic Theory I** 3 Introduction to dynamics, growth and investment, overlapping generations models, Ramsey model, consumption and investment. (Cross-listed course offered as ECONS 500, FIN 500). Required preparation must include intermediate macroeconomics and one year of calculus. Required preparation must include intermediate macroeconomics and one year of calculus.
- 501 Microeconomic Theory I** 3 Microeconomic theory, multi-variate optimization, consumer and producer theory, competitive partial equilibrium, introduction to imperfect competition. (Cross-listed course offered as ECONS 501, FIN 501). Required preparation must include intermediate microeconomics and one year of calculus. Required preparation must include intermediate microeconomics and one year of calculus.
- 502 Macroeconomic Theory II** 3 Course Prerequisite: ECONS 500. Macroeconomic theory, short-run fluctuations and nominal rigidities, monetary economics and inflation, real business cycle models, unemployment international macroeconomics. (Cross-listed course offered as ECONS 502, FIN 502).
- 503 Microeconomic Theory II** 3 Course Prerequisite: ECONS 501. General equilibrium, welfare economics and social choice, market failure, game theory, economics of information. (Cross-listed course offered as ECONS 503, FIN 503).
- 504 Production and Consumption Economics** 3 Course Prerequisite: ECONS 502; ECONS 503. Advanced duality topics, demand and supply system modeling, financial economics and risk. (Cross-listed course offered as ECONS 504, FIN 504).
- 505 Economics for Agricultural Decision Making** 3 Managerial economics with specific applications to agricultural issues.
- 510 Statistics for Economists** 3 Statistical theory underlying econometric techniques utilized in quantitative analysis of problems in economics and finance. (Cross-listed course offered as ECONS 510, FIN 510). Required preparation must include college calculus and matrix algebra. Required preparation must include college calculus and matrix algebra.
- 511 Econometrics I** 3 Course Prerequisite: ECONS 510. Single equation linear and nonlinear models; estimation, inference, finite and asymptotic properties, effects and mitigation of violations of classical assumptions. (Cross-listed course offered as ECONS 511, FIN 511).
- 512 Econometrics II** 3 Course Prerequisite: ECONS 501; ECONS 511. Econometric methods for systems estimation; simultaneous equations, discrete and limited dependent variable, panel data, and time series data. (Cross-listed course offered as ECONS 512, FIN 512).
- 513 Econometrics III** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Linear and non-linear models and maximum likelihood estimation and inference; semi-parametric and parametric methods; limited dependent variable models.
- 514 Econometrics IV** 3 Course Prerequisite: ECONS 502; ECONS 503; ECONS 512. Constrained estimation, testing hypotheses, bootstrap resampling, BMM estimation and inference, nonparametric regression analysis, and an introduction to Bayesian econometrics.
- 521 Topics in Economic Sciences V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Current topics in the development and application of the economic sciences. Required preparation must include intermediate micro- and macro-economics, and econometrics course work.
- 525 Master's Econometrics** 3 Theory and practice of multiple regression methods; applications to the study of economic and other phenomena; use of computer regression programs. Required preparation must include introductory statistics course.
- 526 Master's Microeconomic Analysis I** 3 Master's-level, calculus-based analysis of consumer and producer behavior, partial and general equilibrium, and strategic behavior. Required preparation must include intermediate microeconomics and calculus course work.
- 527 Master's Microeconomic Analysis II** 3 Master's-level, linear algebra-based analysis of consumer and producer theory, comparative statics and constrained optimization. Required preparation must include intermediate microeconomics and calculus course work.
- 529 Research Methods V** 1-2 May be repeated for credit; cumulative maximum 3 hours. Prepare and communicate professional-quality research with an emphasis on learning how to identify, develop, write, and present research.

- 532 Environmental and Natural Resource Economics 3** Economic principles and models applied to natural resource and environmental problems, issues, and policies.
- 533 International Trade and Policy 3** International trade theories, policies, and research issues related to world trade with emphasis on agricultural commodity markets.
- 534 Production Economics 3** Course Prerequisite: ECONS 526. Production economics theory and methods applied to problems of production response, economic optimization, technology, policy, risk and dynamics.
- 555 Managerial Economics for Decision Making 3** Course Prerequisite: Admission to the MBA program. Optimal economic decision making for business in a global environment. Not open to economics graduate students.
- 571 International Trade 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Recent developments in trade theory and policy, including international factor movements, empirical analysis of trade flows and strategic trade policies.
- 572 International Development 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Structural and two-sector growth models of developing countries and countries in transition; empirical estimation of sources of growth.
- 581 Natural Resource Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic dynamics of natural resource systems.
- 582 Environmental Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Economic theory for environmental issues; externalities, property rights, and welfare analysis; policy design and implementation; non-market valuation and cost/benefit analysis.
- 583 Public Sector Economics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Public sector and public choice economics, including government debt and tax policy, public decision making, bureaucratic behavior and rent-seeking, with applications.
- 593 Applications in Microeconomic Topics 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Applied topics in healthcare, sports, transportation and other markets. (Cross-listed course offered as ECONS 593, FIN 593).
- 594 Theory of Industrial Organization 3** Course Prerequisite: ECONS 502; ECONS 503; ECONS 511. Theory of market structure and firm behavior, including price and non-price competition, information and strategic behavior, and technological change. (Cross-listed course offered as ECONS 594, FIN 594).
- 596 Advanced Topics in Financial Economics V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Admission to PhD programs in business. Topics may include financial theory and empirical methods as applied to financial management, investments, international finance, and markets/institutions. (Cross-listed course offered as FIN 596, ECONS 596).
- 598 PhD Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Seminar focusing on PhD students presenting their own research and critically assessing the research of other PhD students.
- 599 Special Topics in Economics 3**

- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Educational Psychology

Degree offered: Doctor of Philosophy (Education)

Faculty working with graduate students: 6

Graduate students: 13

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Requirements

Doctoral students with a specialization in educational psychology take a foundation set of courses. To provide in-depth education in the program in students select supporting coursework. This is done in consultation with the student's doctoral committee. Each student has the opportunity of individualizing the program of study to meet his/her professional goals that may include course work from other departments (e.g., Department of Human Development, Sociology, and Statistics).

Program Description

Individuals with training and experience in educational psychology have strong methodological skills and a deep understanding of learning theory to work on challenging educational problems. As a consequence, educational psychologists enjoy a wide variety of options for employment and career advancement in a variety of education and research settings. For example, educational

psychologists are highly sought after for jobs in industry, state agencies, laboratories, school districts, and universities. Simply stated, this intriguing field presents an ever-changing, challenging, and rewarding work environment. The work in such areas may be rewarded, for example, by the ability to make contributions to the improvement of educational settings (e.g., schools, universities), to have a direct influence on individuals through the development of programs, methods, and tools to meet their needs, or to provide information to individuals who shape policy. Experienced individuals in this profession can expect to earn a good salary and maintain an interesting and fulfilling career.

Degree Description

The educational psychology program, with core requirements in research, evaluation, and measurement and learning theory, provides students with a solid academic foundation in educational measurement and evaluation. In 2009, the College of Education Learning and Performance Research Center (formally the Assessment and Evaluation Center) was established at WSU to provide leadership, training, consultation, and state-of-the-art solutions to challenging educational research questions at the university, state, national, and international levels. Assistantships for educational psychology students in the center provide unique opportunities to apply theoretical concepts and methodologies of program evaluation and educational and psychological measurement to specific practical projects in various educational settings through partnerships with school districts, state agencies, and other social service organizations. Successful professionals in this field have strong methodological skills, an understanding of researchable topics, the ability to develop a research program, the ability to communicate and work with a wide variety of professionals, and the skills to understand nuance and ambiguity in the work environment. Through faculty and student partnerships across campus, the program provides an exciting, interdisciplinary atmosphere for course and field study. Consistent with the scientist-practitioner model of professional training in psychology, students in the doctoral program in educational psychology are required to integrate the theoretical and research offerings of the university with substantial practicum and internship experiences by completing an internship directly related to the specific area of professional training.

Post-Graduate Employment Opportunities

Research, evaluation, and measurement positions at school districts, state education agencies, and universities; positions in the testing industry; researcher at national firms studying educational issues; assessment specialist at national foundation.

Post-Graduate Career Placements

Evaluator for Appalachian Education Laboratory, West Virginia; assessment specialist for the regional educational agency in Cedar Rapids, Iowa; assistant professor in measurement, statistics, and evaluation, Indiana State University; research scientist, Duke Energies, South Carolina; assistant professor of Educational Technology, Morehead State University, Minnesota; Project Director of Psychometrics, Applied Measurement Professionals.

COPSY

- 501 Historical and Philosophical Foundations of Counseling Psychology 3** Course Prerequisite: Admission to Counseling Psychology PhD program. History of counseling psychology; philosophical and psychological systems; current identity of counseling psychology as an academic discipline and a profession.
- 502 Social Psychology Foundations in Educational and Counseling Psychology 3** Social psychology with a special emphasis on the relevance to education and counseling psychology.
- 503 Community Counseling 3** Course Prerequisite: Graduate student in Community Counseling program. Counseling in community settings.
- 511 Theories, Research, and Techniques in Counseling Psychology I 3** Philosophical assumptions, theory of personality, counseling process, techniques and relevant research in the major theories of counseling and personality.
- 512 Counseling Techniques and Microskills 3** Course Prerequisite: COUN PSY 511. Foundation course for all clinical experiences in counseling; communication and interpersonal skills under faculty supervision will be emphasized.
- 513 Career Counseling: Theories and Methods 3** Theories, concepts, methods and findings in career counseling; vocational assessment and prediction.
- 515 Ethics and Professional Problems in Counseling Psychology 3** Professional problems; ethical, legal, and training issues, practices, and new issues.
- 516 Life Span Development and Counseling Issues 3** Major theories and issues in human development and their application to counseling practice including case conceptualization, treatment and intervention planning and psychological assessment and research.
- 517 Diagnoses, Psychopathology and Counseling Psychology 3** Course Prerequisite: COUN PSY 511. Psychopathology and the application of counseling theories to diagnoses, case conceptualization, assessments, treatment plans and research.
- 518 Theoretical Foundations of Group Counseling 3** Course Prerequisite: COUN PSY 512 or concurrent enrollment. History, philosophy and theoretical foundations; the group counselor, members, and issues in group counseling.

- 523 Topics in Counseling Psychology V** 1-4 May be repeated for credit; cumulative maximum 8 hours. Recent research, developments, issues, and/or applications in selected areas of counseling psychology.
- 525 Counseling Diverse Populations 3** Course Prerequisite: COUN PSY 512. Research and theories regarding the influence of culture, gender, and lifestyle on counseling processes; application of appropriate assessment/treatment strategies.
- 527 Individual Appraisal I 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Cognitive assessment of individuals, with an emphasis on the theoretical background and practical skills needed to administer, score, and interpret individual intelligence tests; assessment of learning disabilities, AD/HD, and individual achievement.
- 528 Individual Appraisal II 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Interpretation of representative personality assessment inventories and symptom checklists used in counseling practice; integration of results in psychological reports.
- 529 Counselor Supervision: Theory, Research, and Practice 3** Course Prerequisite: Admission to Counseling Psychology PhD program. Survey of major theoretical approaches, techniques, and research in models of counselor supervision and training.
- 531 Current Issues in School Counseling I 3** Course Prerequisite: Admission to MA program in School Counseling. Issues of immediate concern to school counselors: drug abuse, family violence, adolescent suicide, sexual orientation, crisis intervention, consultation and referral.
- 532 Current Issues in School Counseling II 3** Course Prerequisite: COUN PSY 531. Additional coverage of contemporary issues of concern to school counselors; comprehensive developmental school programs, school community dynamics, parental involvement, consultation.
- 533 Master's Internship in Community Counseling 4** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of counseling theory and techniques in an agency setting.
- 535 Master's Internship in School Counseling 4** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment. Supervised experience in the application of guidance and counseling theory and techniques in a school setting.
- 537 Professional Development in Counseling Psychology 3** NBCC requirements; growth and development, social and cultural foundations, the helping relationship, group dynamics, career, appraisal and research.
- 541 Clinical and Experimental Hypnosis Seminar 3** Course Prerequisite: Student in counseling, educational, experimental, or clinical psychology. Clinical and experimental hypnosis, emphasizing applied research and clinical methods.
- 542 Cross-cultural Research in Counseling and Assessment 3** Cross-cultural research methods, concepts, and findings in counseling and assessment.
- 551 Doctoral Practicum in Counseling Psychology I 4 (2-6)** Course Prerequisite: Admission to Counseling Psychology PhD program; COUN PSY 512; COUN PSY 513 or concurrent enrollment; COUN PSY 515 or concurrent enrollment; COUN PSY 517 or concurrent enrollment. Supervised experiences in the application of counseling psychology theory and techniques.
- 552 Doctoral Practicum in Counseling Psychology II 4 (2-6)** Course Prerequisite: COUN PSY 551. Supervised experiences in the application of counseling psychology theory and techniques.
- 553 Doctoral Practicum in Counseling Psychology III 4 (3-3)** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: COUN PSY 552. Supervised experiences in the application of counseling psychology theory and techniques.
- 561 Continuing Counseling ESA Certification V** 2-6 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Initial Counselor Certification; equivalent of 180 full days of school counselor experience; by department consent only. Peer review requirements for continuing level ESA Counselor Certification.
- 590 Seminar in Research in Counseling Psychology 3** Course Prerequisite: By interview only. Recent developments in counseling psychology research and design applied to PhD dissertation proposals.
- 596 Pet Loss and Human Bereavement 1** Addresses human bereavement and grief in the context of the human/animal relationship.
- 597 Counseling Psychology Internship V** 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience, individual and group counseling, evaluation, assessment, supervision, and teaching.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- ED AD**
- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.

- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).

- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDRES**
- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

SOC

- 510 Development of Social Theory 3** Examination of the foundations of social theory.
- 517 Seminar in Contemporary Sociological Theory 3** Recent developments in sociological theory, analysis, application and appraisal of specific theoretical systems.
- 519 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 520 Research Methods in Sociology 3** Methodology of social research at the professional level.
- 521 Regression Models 3** Simple and multiple regression, structural equation models, nonlinear applications, applications for discrete dependent variables.
- 522 Advanced Sociological Methodology 3** May be repeated for credit; cumulative maximum 12 hours. Scaling theory, sampling theory, experimental design, measurement of association, multivariate analysis, current methods and techniques. Recommended preparation: SOC 521.
- 523 Qualitative Methods Practicum 3** Introduction to qualitative research methods as used in social sciences; epistemological underpinnings and empirical techniques. Recommended preparation: SOC 520.
- 525 Practicum in Survey Research 3** Practical experience in design and implementation of telephone and mail surveys; participation in all aspects of conducting a survey. Recommended preparation: SOC 520.
- 526 Experimental Methods 3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SOC 521. Experimental methods including design and analysis, settings, manipulations, measures and human subjects considerations.
- 530 Demography 3** Population studies; causes, effects, and measurement of changes in fertility, mortality, and migration; population estimation and projection.
- 531 Human Ecology 3** Ecosystem context of human life; change viewed ecologically; sociological use and misuse of ecological concepts; issues in theory and research.
- 532 Environmental Sociology 3** Societal-environmental interactions; impacts of human societies on the physical environment; environmental impacts on human behavior and social organization.
- 535 Technology and Society 3** Analysis of sociotechnical systems; effects of technology on society; the social shaping of technologies and their environmental impacts.
- 536 Special Topics in Environmental Sociology V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 9 hours. Special topics in environmental sociology.
- 542 Social Stratification: Class, Race and Gender Inequalities 3** Theoretical and empirical research in both classic stratification literature and recent scholarship on class, race/ethnicity and gender.
- 545 Sociology of Community 3** Community stability and change: interaction processes; decision making; societal linkages; effects on well-being.
- 553 Social Organization and the Family 3** The family as a social institution; principles of social organization applied to family relationships; macro-level analyses of family structure.
- 554 Social Psychology of the Family 3** The family as an interacting group; social psychological theories and research applied to family relationships; effects of families on individuals.
- 556 Sociology of Aging and the Life Course 3** Theory and research on the changes individuals undergo over the life course; influences of history, social structure, agency and social relations on lives.
- 574 Labor Market Inequality 3** Overview of research on the causes and consequences of inequality in U.S. work organizations.
- 580 Sociology of Race Relations 3** Analysis of race/ethnic relations; historical and current theoretical explanations of race/ethnic relations.
- 582 Social Movements 3** Theories and methods in social movement studies.
- 590 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 591 The Sociology Profession 1** May be repeated for credit; cumulative maximum 2 hours. Requirements, operations, problems, and possibilities of the sociology profession.
- 592 Special Topics in Sociology 3** May be repeated for credit; cumulative maximum 9 hours.
- 593 Special Topics in Sociology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Special topics in sociology.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Educational Psychology

Degree offered: Master of Arts in Education

Faculty working with graduate students: 4

Graduate students: 5

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Program Description

Individuals with training and experience in educational psychology have strong methodological skills and a deep understanding of learning theory to work on challenging educational problems. As a consequence, educational psychologists enjoy a wide variety of options for employment and career advancement in a variety of education and research settings. For example, educational psychologists are highly sought after for jobs in industry, state agencies, laboratories, school districts, and universities. Simply stated, this intriguing field presents an ever-changing, challenging, and rewarding work environment. The work in such areas may be rewarded, for example, by the ability to make contributions to the improvement of educational settings (e.g., schools, universities), to have a direct influence on individuals through the development of programs, methods, and tools to meet their needs, or to provide information to individuals who shape policy. Experienced individuals in this profession can expect to earn a good salary and maintain an interesting and fulfilling career.

Degree Description

The Ed.M. and M.A. degrees with specialization in educational psychology are a concentration in research, evaluation, psychometrics, and cognition. While students at the Master's level in educational psychology complete a common core of courses, a portion of each Master's degree program is composed of courses selected by the student and his/her advisory committee to tailor the program of study around the student's personal interests and professional aspirations. M.A. or Ed.M. recipients in educational psychology are well prepared to continue doctoral level training if so desired. However, an M.A. or Ed.M. would give access to entry level positions in this intriguing field that presents an ever-changing, challenging, and rewarding work environment. The M.A. and the Ed.M. are both options available to a student. The M.A. does require the completion of a written thesis, whereas the Ed.M. requires an examination. The former is encouraged if a student is considering the pursuit of a doctoral degree. The work in such areas may include for example, the opportunity to make contributions to the improvement of educational settings (e.g., schools, universities), to have some influence on individuals through consultation on programs, methods, or to provide information through analysis to individuals who shape policy. Experienced individuals in this profession can expect to earn a good salary and maintain an interesting and fulfilling career in employment in private firms, school districts, business, industry, or state agencies as program evaluators, student assessment coordinators, research technicians, or data analysts, as examples.

Post-Graduate Employment Opportunities

Research, evaluation, and measurement positions at school

districts, state education agencies, and universities; positions in the testing industry; researcher at national firms studying educational issues; assessment specialist at national foundation.

Post-Graduate Career Placements

Evaluator for Appalachian Education Laboratory, West Virginia; assessment specialist for the regional educational agency in Cedar Rapids, Iowa; assistant professor in measurement, statistics, and evaluation, Indiana State University; research scientist, Duke Energies, South Carolina; assistant professor of Educational Technology, Morehead State University, Minnesota; Project Director of Psychometrics, Applied Measurement Professionals.

- 569 Seminar in Quantitative Techniques in Education** V 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation** 3 Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation** 3 Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.

- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Educational Psychology

Degree offered: Master of Education

Faculty working with graduate students: 4

Graduate students: 1

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Program Description

Individuals with training and experience in educational psychology

have strong methodological skills and a deep understanding of learning theory to work on challenging educational problems. As a consequence, educational psychologists enjoy a wide variety of options for employment and career advancement in a variety of education and research settings. For example, educational psychologists are highly sought after for jobs in industry, state agencies, laboratories, school districts, and universities. Simply stated, this intriguing field presents an ever-changing, challenging, and rewarding work environment. The work in such areas may be rewarded, for example, by the ability to make contributions to the improvement of educational settings (e.g., schools, universities), to have a direct influence on individuals through the development of programs, methods, and tools to meet their needs, or to provide information to individuals who shape policy. Experienced individuals in this profession can expect to earn a good salary and maintain an interesting and fulfilling career.

Degree Description

The Ed.M. and M.A. degrees with specialization in educational psychology are a concentration in research, evaluation, psychometrics, and cognition. While students at the Master's level in educational psychology complete a common core of courses, a portion of each Master's degree program is composed of courses selected by the student and his/her advisory committee to tailor the program of study around the student's personal interests and professional aspirations. M.A. or Ed.M. recipients in educational psychology are well prepared to continue doctoral level training if so desired. However, an M.A. or Ed.M. would give access to entry level positions in this intriguing field that presents an ever-changing, challenging, and rewarding work environment. The M.A. and the Ed.M. are both options available to a student. The M.A. does require the completion of a written thesis, whereas the Ed.M. requires an examination. The former is encouraged if a student is considering the pursuit of a doctoral degree. The work in such areas may include for example, the opportunity to make contributions to the improvement of educational settings (e.g., schools, universities), to have some influence on individuals through consultation on programs, methods, or to provide information through analysis to individuals who shape policy. Experienced individuals in this profession can expect to earn a good salary and maintain an interesting and fulfilling career in employment in private firms, school districts, business, industry, or state agencies as program evaluators, student assessment coordinators, research technicians, or data analysts, as examples.

Post-Graduate Employment Opportunities

Research, evaluation, and measurement positions at school districts, state education agencies, and universities; positions in the testing industry; researcher at national firms studying educational issues; assessment specialist at national foundation

Post-Graduate Career Placements

Evaluator for Appalachian Education Laboratory, West Virginia; assessment specialist for the regional educational agency in Cedar Rapids, Iowa; assistant professor in measurement, statistics, and evaluation, Indiana State University; research scientist, Duke Energies, South Carolina; assistant professor of Educational Technology, Morehead State University, Minnesota; Project Director of Psychometrics, Applied Measurement Professionals.

EDPSY

- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18

May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Electrical Engineering

Degree offered: Doctor of Philosophy (Electrical and Computer Engineering)

Faculty working with graduate students: 36

Graduate students: 41

Graduate students receiving assistantships or scholarships: 73%

Tests required: GRE (Combined), TOEFL

Deadline: Fall: January 10th

Spring: July 1st

Requirements

Qualifying Examination in 3rd Semester

Program Description

WSU's reputation for high-quality education, research, and public service enables it to continue achieving its missions. Graduate students play an essential part in carrying out the School's mission to conduct research that will make a difference to industry, government, and society. Graduate-level programs in electrical and computer engineering include power engineering; microelectronics; electromagnetics and optical communications, control, and signal processing; embedded systems and software engineering.

Roger Alexander, David Bakken, Benjamin Belzer, Anjan Bose, Shira Broschat, Diane Cook, Zhe Dang, Jose Delgado-Frias, Thomas Fischer, Carl Hauser, Deuk Heo, Lawrence Holder, Scott Hudson, Christopher Hundhausen, Sankar Jayaram, Anantharaman Kalyanaraman, Min Kim, George Larue, Robert Lewis, Chen-Ching Liu, John Miller, Robert Olsen, Mohamed Osman, Partha Pande, Patrick Pedrow, John Ringo, Sandip Roy, Ali Saberi, John Schneider, Behrooz Shirazi, Krishnamoorthy Sivakumar, Wenzhan Song, Anurag Srivastava, Li Tan, Vaithianath Venkatasubramanian and Kung-Chi Wang.

Electrical Engineering

E E

- 501 Linear System Theory 3** Dynamic systems from the state variable approach; observability, controllability, stability, and sensitivity of differential and nondifferential systems.
- 502 Linear Multivariable Control 3** Course Prerequisite: E E 501. Optimal linear feedback control, optimal stochastic observers, LQG/LTR design methodology, modern Wiener-Hopf design, robust controllers.
- 503 Structure, Dynamics and Control of Large-scale Networks 3** Course Prerequisite: E E 501; E E 507. Introduction and development of computational and analytical methods required to characterize large-scale networks.
- 504 Modern Optics 3** Diffraction theory, Fourier transforming and imaging properties of lenses, spatial filtering, holography, temporal and spatial coherence, imaging through random media.
- 505 Nonlinear System Theory 3** Course Prerequisite: E E 501. Overview of nonlinear phenomena, Lyapunov stability, input-output stability, periodic orbits, singular perturbation, differential geometric methods, bifurcations and complex behaviors.
- 507 Random Processes in Engineering 3** Functions of random variables; random sequences; stochastic processes; mean-square stochastic calculus; ergodicity; spectral density; linear transformations, filtering, dynamic systems.
- 508 Estimation Theory for Signal Processing, Communications, and Control 3** Course Prerequisite: E E 501; E E 507. Principles of statistical estimation; LLSE; Kalman filtering; smoothing; prediction; maximum-likelihood and Bayesian estimation.
- 509 Adaptive Control 3** Course Prerequisite: E E 501. Model reference adaptive systems (MRAS), adaptive observers, adaptive control, on-line identification, robustness issues, and self-tuning regulators.
- 511 Protection of Power Systems II 3** Protection of electrical equipment as related to electric power systems with emphasis on digital algorithms.
- 518 Advanced Electromagnetic Theory I 3** Electromagnetic waves, electromagnetic theorems and concepts, solutions to the wave equation in rectangular, cylindrical and spherical coordinates.
- 520 Plasma Engineering 3** Electromagnetics, kinetic theory, and fluid mechanics of plasmas in space, arcs, plasma processing, coronas, and fusion reactors.

- 521 Analysis of Power Systems 3** Concepts and practices of modern power engineering, including steady-state and dynamic analysis, economics and control design.
- 523 Power Systems Stability and Control 3** Dynamic analysis of interconnected electric power system; modeling of synchronous generators, loads and transmission network; small-signal stability and transient stability analysis; dynamic stability controls.
- 524 Advanced Computer Architecture 3** Instruction set architectures, pipelining and super pipelining, instruction level parallelism, superscalar and VLIW processors, cache memory, thread-level parallelism and VLSI.
- 525 Power System Applications of Power Electronics 3** Course Prerequisite: E E 521. Power electronic converters in modern power systems, FACTS devices, HVDC, compensation; microgrids and integration renewable energy resources; modeling and control.
- 527 Antenna Theory and Design 3** Antenna fundamentals, analytical techniques, characteristics and design procedures for selected types of wire, broadband, and aperture antennas.
- 528 Advanced Topics in Electromagnetics 3** May be repeated for credit; cumulative maximum 6 hours. Advanced topics of current interest in wave propagation (electromagnetics, acoustics, or optics).
- 530 Digital Signal Processing II 3** Course Prerequisite: E E 507. Frequency selective digital filtering, least-squares filtering, adaptive filtering, multirate signal processing.
- 535 Numerical Solutions to EM Problems 3** Theory and use of finite-difference time-domain; numeric dispersion; absorbing boundary conditions; scattering; radiation; time-domain vs. frequency-domain.
- 536 Power Systems Economics and Electricity Markets 3** Economic dispatch and optimal power flow; electricity market; short-term load forecasting; electricity price forecasting; price-based unit commitment; arbitrage in electricity markets; market power analysis.
- 545 Data Compression 3** Course Prerequisite: E E 507. Source coding with a fidelity criterion; quantization theory; predictive, transform and subband coding; noiseless source codes.
- 548 Information Theory and Channel Coding 3** Course Prerequisite: E E 507. Information theory; entropy, mutual information, source and channel coding theorems, channel capacity, Gaussian channels; channel coding: block and convolutional codes.
- 551 Data Communication Systems 3** Course Prerequisite: E E 507. Digital communications; multi-amplitude/phase signal constellations; probability of error performance; cutoff rate; Viterbi algorithm; trellis coded modulation.
- 555 Computer Communication Networks 3** Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 562 Fault Tolerant Computer Systems 3** Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 571 Advanced Wireless Integrated Circuits and Systems 3** Analysis and design methodologies of state-of-the-art wireless integrated circuits and systems.
- 576 Analog Integrated Circuits 3** Analysis and design of analog integrated circuits in CMOS and BiCMOS technologies; current mirrors, gain stages, operational amplifiers, frequency response, and compensation.
- 581 Advanced Topics in Power Systems V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: E E 521. Power system operations including AGC, economic dispatch and security; power system dynamics; intelligent systems applications.
- 582 Advanced Topics V 1-3** May be repeated for credit.
- 586 VLSI Systems Design 3** VLSI models, layout algorithms, design methodologies, simulation and layout tools, algorithm design for VLSI implementation.
- 587 System on Chip (SoC) Design and Test 3** System on Chip (SoC) and sub-micron integrated circuit design and testing.
- 595 Directed Study in Electrical Engineering V 1 (0-3) to 3 (0-9)** May be repeated for credit. Current topics in electrical engineering.
- 596 Advanced Analog Integrated Circuits 3** MOS and BiCMOS technologies; MOS and BiCMOS operational amplifiers; A/D, D/A converters; switched-capacitor filters; continuous-time filters.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Electrical Engineering

Degree offered: Master of Science in Electrical Engineering

Faculty working with graduate students: 36

Graduate students: 41

Graduate students receiving assistantships or scholarships: 73%

Program offered: Pullman, Spokane, Tri-Cities

Tests required: TOEFL, GRE (Combined)

Deadline: Fall: January 10th

Spring: July 1st

Requirements

The program must consist of 30 or more hours of credit including 21 or more hours of coursework for which a grade of A-F is given and nine or more credits of thesis research (EE 700).

Program Description

WSU's reputation for high-quality education, research, and public service enables it to continue achieving its missions. Graduate students play an essential part in carrying out the School's mission to conduct research that will make a difference to industry, government, and society. Graduate-level programs in electrical and computer engineering include power engineering; microelectronics; electromagnetics and optical communications, control, and signal processing; embedded systems and software engineering.

Degree Description

The program must consist of 30 or more hours of credit including 21 or more hours of coursework for which a grade of A-F is given and nine or more credits of thesis research (EE 700). Under the thesis option (all programs), the student is expected to complete a significant research project and submit a thesis, which adheres to EECS standards and the formatting requirements of the advisory committee and the Graduate School. The thesis work should be submitted for refereed publication prior to scheduling the final exam. It is the student's responsibility to meet the deadlines specified by the Graduate School. All students on financial aid from WSU must choose the thesis option.

Post-Graduate Employment Opportunities

The success of our graduate students in industry and higher education reflects the excellence of the School of EECS and its programs. In industry, our graduate degree holders are presidents, CEOs, CIOs, vice presidents, directors, and division and department managers. Some have founded at least one company and initiated and promoted new technologies, operations and sales strategies. Others have excelled as senior designers, project managers, senior scientists, and lead engineers. In higher education, they are professors, deans, and research directors. Graduate degrees have enriched their lives and careers, while affecting positively the economy of the state and nation. All are excellent role models for their peers and our students.

Post-Graduate Career Placements

Microsoft, Boeing, Intel, PNNL

Degree offered: Master of Science in Engineering

Faculty working with graduate students: 5

Graduate students: 7

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

This is an interdisciplinary program administered through the College of Engineering and Architecture's Office of the Associate Dean of Research and Graduate Programs, with students typically advised and funded through one of several departments in the College. The interdisciplinary nature of this degree provides considerable flexibility in designing programs of study tailored to the specialized needs of each student. Areas of specialization include (but are not limited to): biological systems engineering, atmospheric research, materials science and engineering, and bioengineering. These students often work in one of our interdisciplinary centers such as: Bioengineering Research Center (BRC), Center for Environmental, Sediment, and Aquatic Research (CESAR), Center for Environmental Education and Outreach (CEREO), Center for Materials Research (CMR), Engineering Education Research Center (EERC), Laboratory for Atmospheric Research (LAR), and the Wood Materials Research Lab (WMEL). Thesis and non-thesis options are available in the M.S. degree program.

Engineering

Degree offered: Master of Science in Engineering – Non Thesis

Faculty working with graduate students: 4

Graduate students: 4

Graduate students receiving assistantships or scholarships: 25%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

No additional requirements.

Program Description

This is an interdisciplinary program administered through the College of Engineering and Architecture's Office of the Associate Dean of Research and Graduate Programs, with students typically advised and funded through one of several departments in the College. The interdisciplinary nature of this degree provides considerable flexibility in designing programs of study tailored to the specialized needs of each student. Areas of specialization include (but are not limited to): biological systems engineering, atmospheric research, materials science and engineering, and bioengineering. These students often work in one of our interdisciplinary centers such as: Bioengineering Research Center (BRC), Center for Environmental, Sediment, and Aquatic Research (CESAR), Center for Environmental Education and Outreach (CEREO), Center for Materials Research (CMR), Engineering Education Research Center (EERC), Laboratory for Atmospheric Research (LAR), and the Wood Materials Research Lab (WMEL). Thesis and non-theses options are available in the M.S. degree program.

Engineering and Technology Management

Degree offered: Master of Engineering and Technology Management

Faculty working with graduate students: 9

Graduate students: 100

Program offered: DDP

Deadline: Fall: July 15 (January 10 international)
Spring: November 1 (July 1 international)
Summer: March 15 (Default international)

Requirements

Students must complete six classes from the core areas of study and four electives to equal 10 classes (30 graded credits); and students must choose either a 3 credit comprehensive exam or a 4+ credit project. Students must enroll in two hours of E M 702 the final semester regardless of which option they choose.

Program Description

Washington State University's Engineering and Technology Management (ETM) Program is designed for working professionals who want to develop skills to manage technology and people. The program prepares engineering and business professionals to make strategic and operational decisions and become leaders in the management of technology. Courses are designed to provide practicing engineers with the knowledge, tools, and skills to become proficient managers of projects, operations, organizations, and people. The ETM program is specifically tailored for professionals who want to advance their careers while still working full time. Live, online lectures are available from anywhere and at any time. Students will focus on: Customer-oriented approaches global technology and innovation strategies, performance management in technical organizations, management of scarce resources, interdisciplinary team approach

Degree Description

A Master's Degree in Engineering and Technology Management (METM) requires 30 semester hours (10 courses) of course work and three to four+ credits of a final non-thesis project report or comprehensive exam (E M 702). The program is interdisciplinary, with course offerings in engineering management and technology related business courses. E M courses are delivered via the Internet to students worldwide. Elluminate Web conferencing software allows faculty and students to interact and collaborate in a virtual classroom environment in real-time. Each class session is a self-contained Webinar presented and facilitated by your instructor. All course webinars are presented and managed using WSU's Angel Learning Management System, a Web-enabled course hosting platform. Students must be familiar with the software used in the METM Program before taking classes. Links are posted on the program web site.

Training and Professional Development Opportunities

Students may choose either one of the many graduate certificates or the full master of engineering and technology management degree. Many students earn one or more certificates while working towards the Master's degree. Others begin in the certificate program and migrate to a full degree program.

Post-Graduate Employment Opportunities

The Master of Engineering and Technology Management Program (METM) prepares engineering and business professionals to make strategic and operational decisions and become leaders in the management of technology. The program provides technology team managers with the knowledge, tools, and skills to become proficient managers of projects, operations, organizations, and people. The program is specifically tailored for professionals who want to advance their careers while still working fulltime.

Faculty

Rick Cherf, Robert Crick, William Gray, James Holt, Luna Magpili, David Paulus, John Ringo, Hal Rumsey and George Sudikatus.

Engineering Management

E M

- 501 Management of Organizations 3** Exploration of issues related to individual behavior in work organizations, including motivation, leadership, team-building, and team management skills.
- 505 Finance for Technical Systems 3** Time value of money, capital budgeting, accounting principles, cost, valuation, risk, cost accounting and sensitivity analyses: concepts for engineering decision-making.
- 508 Legal Concepts for Engineering and Technical Managers 3** Basic legal obligations of engineering/technical managers; identify, minimize and recognize risks and liability; contemporary legal environment and business law.
- 520 Construction Project Management 3** Construction project bids, proposals, contracts, project delivery/organization; estimating, scheduling, resource loading, project monitoring and controls, safety and quality
- 522 Supervision and Leadership for Engineering and Technology Managers 3** Strategies of supervision with practical application techniques presented to create individual and organizational motivation.
- 526 Constraints Management 3** Identifies factors that block improvements in any system; effective breakthrough solutions; continual systems improvements for manufacturing, administration, projects. Credit not granted for both E M 426 and E M 526.
- 530 Applications of Constraints Management 3** Understanding and applying proved solutions developed by the theory of constraints in areas of production, project management, finance, and distribution. Credit not granted for both E M 430 and E M 530.
- 534 Contemporary Topics in Constraints Management 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: E M 526 or 530. Contemporary teaching tools, software packages, current techniques and thought in managing complex systems using the theory of constraints.
- 538 Lean Agility 3** Integration of the best of Lean, Six Sigma, and Theory of Constraints to accelerate the continuous improvement process.
- 540 Operations Research for Managers 3** Applying linear, integer, goal programming; network optimization; queuing analysis; dynamic programming; simulation; Markov analysis; and forecasting to engineering management decisions.
- 545 Technical Decision Analysis 3** Decision analysis provides a structured discipline for describing, analyzing, and finalizing decisions involving uncertainty. Recommended preparation: Basic STAT course.
- 555 Enterprise Resource Management 3** Focusing the flow of quality, timely products and cooperative supply chain operations and planning using simulation and effective enterprise resource management.
- 560 Integrated Supply Chain Management 3** How technical managers analyze and manage the flow of materials, services, and information for products from inception to final customer.
- 564 Project Management 3** Technical tools, Critical Path Method (CPM), Program Evaluation Review Technique (PERT), cost/schedule control systems, behavioral issues and organizational structure. Credit not granted for both E M 464 and E M 564.
- 565 Introduction to Systems Management 3** Design manufacture, operation of complex system development for engineering managers; project planning, organizing, and controlling tools for engineering system constraints.
- 566 System Engineering Analysis and Practice 3** Problem-solving methodologies based on system concepts and design applications for complex, large-scale technical systems pertinent to program managers.
- 567 System Supportability and Logistics Management 3** Supportability and logistics engineering and management in a system life cycle, from concept to retirement.
- 570 Six Sigma Quality Management 3** Graduate-level counterpart of E M 470; additional requirements.
- 575 Performance Management in Technical Organizations 3** Management of high technology organizations; planning, measurement, and human factors in improving high technology organizations; productivity, motivation and performance systems.
- 580 Quality Control and Reliability 3** Quality analysis, modeling process, product quality, statistical process control, process capability studies; sampling concepts, reality models, predictions, design testing. Credit not granted for both E M 480 and E M 580. Recommended preparation: STAT 430.
- 585 Quality Improvement Using Design of Experiments 3** Design for quality improved products; processes and services using designed experiments, including robust/parameter design. Credit not granted for both E M 485 and E M 585. Recommended preparation: Undergraduate statistics.
- 590 Design for Product and Service Realization 3** Techniques and tools to optimize cost, quality, time to market, and to improve comprehensive product design, manufacturability and service components. Credit not granted for both E M 490 and E M 590.
- 591 Strategic Management of Technology and Innovations in Engineering 3** Management of technological innovation; integrating strategy, new product development, corporate entrepreneurship, and innovation; features action-oriented cases.
- 595 Advanced Topics in Engineering Management I V 1-3** May be repeated for credit; cumulative maximum 9 hours. A wide range of current high-interest engineering management topics.
- 596 Advanced Topics in Engineering Management II 3** May be repeated for credit; cumulative maximum 9 hours. A wide range of current high-interest engineering management topics.

600 Special Projects or Independent Study V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Engineering Nanotechnology – Cert in Eng Nanotechnology

Degree offered: Graduate Certificate in Engineering Nanotechnology

Faculty working with graduate students: 30

Graduate students: 5

Program offered: Pullman, Tri-Cities

Deadline: Fall: January 10

Spring: July 1

Requirements

The student must complete a minimum of 9 credits from the following list of 3-credit courses: ME 509 MEMS Engineering, ME 520 Multiscale Modeling, MSE 506 Biomaterials, MSE 508 Polymer Nanocomposites and Functionalities, MSE 517 Thin Films, MSE 592 Transmission Electron Microscopy. Note: courses in which a grade of B- or below is obtained may not count towards completion of the requirements.

Program Description

Nanotechnology is the vanguard of a revolution in technology and industry. Fundamental nanoscale processes, nanomaterials, nanoscale devices and systems, and instrumentation for nanotechnology have been identified as key component areas by the National Nanotechnology Initiative. This certificate program is designed for working professionals who wish to develop expertise in this emerging technology to advance their careers or graduate students who wish to have an emphasis in this area. The program will provide a suite of classes that will offer a focused and comprehensive emphasis in engineering nanotechnology.

Degree Description

This certificate program is designed for working professionals who wish to develop expertise in this emerging technology to advance their careers or graduate students who wish to have an emphasis in this area. Students must complete a minimum of nine credits from a specific list of three-credit 500-level courses found at <http://www.mme.wsu.edu/grad/certificate.html>.

Post-Graduate Employment Opportunities

This certificate program is designed for working professionals who wish to develop expertise in this emerging technology to advance their careers or graduate students who wish to have an emphasis

in this area.

Faculty

Gaurav Ameta, Stephen Antolovich, David Bahr, Amit Bandyopadhyay, Susmita Bose, Jow-Lian Ding, Indranath Dutta, Prashanta Dutta, Karl Englund, David Field, Sankar Jayaram, Uma Jayaram, William Kinsel, Jacob Leachman, David Lin, Kelvin Lynn, Konstantin Matveev, Sinisa Mesarovic, Changki Mo, M Norton, Jitesh Panchal, Charles Pezeshki, Cecilia Richards, Robert Richards, Lloyd Smith, Anita Vasavada, Michael Wolcott, Hussein Zbib, Jinwen Zhang and Weihong Zhong.

Mechanical Engineering

M E

- 501 Continuum Mechanics 3** Unified presentation of principles common to all branches of solid and fluid mechanics; viscous fluids, elasticity, viscoelasticity, and plasticity.
- 502 Sustainability Assessment for Engineering Design 3** Sustainability assessment, including environmental, societal, and economic assessment, in design and planning for entire product life cycle.
- 503 Systems Design Approaches for Sustainability 3** Sustainability in systems design methodologies; systems modeling and decision-making for sustainability; multidisciplinary design optimization; research topics.
- 509 MEMS Engineering 3 (2-3)** Introduction to the design, fabrication and application of microelectromechanical systems. (Cross-listed course offered as ME 509, MSE 509).
- 513 Crystal Plasticity 3** Dislocation theory; slip; climb; mechanical properties of polycrystalline materials and application to important deformation processes. (Cross-listed course offered as MSE 513, ME 513, MATSE 513).
- 514 Thermodynamics of Solids 3** Thermodynamic properties of solid solutions; models for substitutional and interstitial solutions; configurational and non-configurational contributions; calculation of phase diagrams. (Cross-listed course offered as MSE 514, ME 514).
- 515 Advanced Heat Transfer 3** Derivation of the energy conservation equation; laminar and turbulent forced convection heat transfer with internal and external flow; free convection.
- 516 Conduction and Radiation Heat Transfer 3** Principles of conduction and radiation heat transfer with focus on solving conduction and radiation problems of engineering interest.

- 517 Thin Films 3** Materials science aspect of thin films, including growth, characterization, and properties for electrical, mechanical, corrosion, and optical behavior. (Cross-listed course offered as MSE 517, ME 517).
- 520 Multiscale Modeling in Thermomechanics of Materials 3** Multiscale problems in thermomechanics of materials; practical and computational aspects of homogenization, granular materials, dislocation plasticity and atomistic methods. (Cross-listed course offered as ME 520, MSE 520).
- 521 Fundamentals of Fluids I 3** Governing equations of fluid mechanics accompanied by applications of Navier-Stokes equation to simple flow situations, boundary layer analysis.
- 526 Statistical Thermodynamics 3** Microscopic development of equilibrium; classical and quantum particle statistics; statistical description of real and ideal gases, solids, and liquids.
- 527 Macroscopic Thermodynamics 3** Advanced thermodynamics from macroscopic viewpoint; basic postulates, equilibrium, stability, property relations; application to thermal-fluid and solid mechanics; irreversible thermodynamics.
- 530 Elasticity 3** Theory of kinematics of solid deformable bodies; conservation laws applied to an elastic continuum; generalized linear stress-strain behavior with applications. (Cross-listed course offered as ME 530, MSE 530).
- 531 Theory of Plasticity 3** The fundamentals of the theory of plasticity; the classical theory of plasticity; the classical theory and modern continuum theories of large elastoplastic deformations. (Cross-listed course offered as ME 531, MSE 531).
- 532 Finite Elements 3** Theory of finite elements; applications to general engineering systems considered as assemblages of discrete elements. (Cross-listed course offered as CE 532, ME 532).
- 534 Mechanics of Composite Materials 3** Analysis of micro-mechanical and macromechanical behavior of composite materials with emphasis on fiber-reinforced composite; prediction of properties; stiffness and strength theories; laminated beams and plates; dynamic behavior; environmental effects. (Cross-listed course offered as ME 534, MSE 534).
- 537 Fracture Mechanics and Mechanisms 3** Fracture mechanics and mechanisms and the microstructural origins of toughness in metals, polymers and composites. (Cross-listed course offered as MSE 537, ME 537).
- 540 Advanced Dynamics of Physical Systems 3** Newtonian dynamics, rotating coordinate systems; Lagrangian and Hamiltonian mechanics; gyroscopic mechanics, other applications.
- 556 Numerical Modeling in Fluid Mechanics 3** Fundamental concepts in development of numerical models for fluid flow with applications to steady and unsteady flows.
- 565 Nuclear Reactor Engineering 3** Reactor power distribution; thermal and exposure limits; critical heat flux and pressure design; neutronic/thermal hydraulic relationships; transient/accident analysis.
- 574 Foundations of CAD 3** Topics fundamental to the creation of CAD, engineering visualization, and virtual reality based engineering software.
- 575 Geometric Modeling 3** Study of the mathematics behind the creation of complex shapes for CAD using curves, surfaces, and solids.
- 579 Advanced Topics in Mechanical Engineering V 1-3** May be repeated for credit.
- 581 Control Systems 3** Analysis and design of feedback control systems.
- 598 Seminar 1** May be repeated for credit. Current research interests.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Materials Science and Engineering**
- MSE**
- 503 Advanced Topics in Materials Engineering V 1-3** May be repeated for credit; cumulative maximum 6 hours.
- 505 Advanced Materials Science 3** Broad baseline in materials science including relationships between structure and properties. (Cross-listed course offered as MSE 505, MATSE 505).
- 506 Biomaterials 3** Overview of the different types of materials used in biomedical applications such as implants and medical devices. Credit not granted for both MSE 406 and MSE 506. (Cross-listed course offered as MSE 506 and MATSE 506.)
- 508 Polymer Nanocomposites and Functionalities 3** Structures, properties, fabrication and applications of nano-scale material and their polymer nanocomposites; functionalities including flame retardant, electrically, thermal and damping properties.

- 509 MEMS Engineering 3** (2-3) Introduction to the design, fabrication and application of microelectromechanical systems. (Cross-listed course offered as ME 509, MSE 509).
- 513 Crystal Plasticity 3** Dislocation theory; slip; climb; mechanical properties of polycrystalline materials and application to important deformation processes. (Cross-listed course offered as MSE 513, ME 513, MATSE 513).
- 514 Thermodynamics of Solids 3** Thermodynamic properties of solid solutions; models for substitutional and interstitial solutions; configurational and non-configurational contributions; calculation of phase diagrams. (Cross-listed course offered as MSE 514, ME 514).
- 515 Electronic Properties of Materials 3** Electron energy bands in solids, electrical conduction in metals and semiconductors, applications to semi-conduction devices based on silicon and III-V compounds.
- 516 Phase Transformations 3** Thermodynamics, nucleation, interface motion, mechanisms and kinetics of chemical reactions between solid metals and their environment. (Cross-listed course offered as MSE 516, MATSE 516).
- 517 Thin Films 3** Materials science aspect of thin films, including growth, characterization, and properties for electrical, mechanical, corrosion, and optical behavior. (Cross-listed course offered as MSE 517, ME 517).
- 520 Multiscale Modeling in Thermomechanics of Materials 3** Multiscale problems in thermomechanics of materials; practical and computational aspects of homogenization, granular materials, dislocation plasticity and atomistic methods. (Cross-listed course offered as ME 520, MSE 520).
- 521 Statistics of Microstructures 3** Stereology, orientation and spatial distributions, percolation, measurement techniques and application to modeling of microstructures. (Cross-listed course offered as MSE 521, MATSE 521). Recommended preparation: MATH 540.
- 523 Ceramics Processing 3** Fundamentals of ceramic processing science for thin films and bulk ceramics.
- 530 Elasticity 3** Theory of kinematics of solid deformable bodies; conservation laws applied to an elastic continuum; generalized linear stress-strain behavior with applications. (Cross-listed course offered as ME 530, MSE 530).
- 531 Theory of Plasticity 3** The fundamentals of the theory of plasticity; the classical theory of plasticity; the classical theory and modern continuum theories of large elasto-plastic deformations. (Cross-listed course offered as ME 531, MSE 531).
- 534 Mechanics of Composite Materials 3** Analysis of micro-mechanical and macromechanical behavior of composite materials with emphasis on fiber-reinforced composite; prediction of properties; stiffness and strength theories; laminated beams and plates; dynamic behavior; environmental effects. (Cross-listed course offered as ME 534, MSE 534).
- 537 Fracture Mechanics and Mechanisms 3** Fracture mechanics and mechanisms and the microstructural origins of toughness in metals, polymers and composites. (Cross-listed course offered as MSE 537, ME 537).
- 543 Polymer Materials and Engineering 3** Preparation and structure-property relationship of polymer materials with emphasis on fracture mechanics and toughening. (Cross-listed course offered as CE 593, MSE 543). Required preparation must include MSE 402. Required preparation must include MSE 402.
- 544 Natural Fibers 3** Structural aspects and properties of natural fibers including anatomy, ultrastructure, and chemistry. (Cross-listed course offered as CE 594, MSE 544).
- 545 Polymer and Composite Processing 3** Polymer and composite processing from fundamental principles to practical applications. (Cross-listed course offered as CE 595, MSE 545).
- 546 Engineered Wood Composites 3** Theory and practice of wood composite materials, manufacture and development. (Cross-listed course offered as CE 596, MSE 546).
- 547 Polymers and Surfaces for Adhesion 3** Physical chemistry of polymers and surfaces needed to understand interface morphology, adhesion mechanisms and bond performance. (Cross-listed course offered as CE 597, MSE 547). Required preparation must include MSE 402, or 404. Required preparation must include MSE 402 or 404.
- 548 Natural Fiber Polymer Composites 3** Fundamentals, development and application of composite materials produced from polymers reinforced with natural fibers and wood as major components. (Cross-listed course offered as CE 598, MSE 548).
- 549 Nondestructive Testing of Structural Materials 3** Principles of nondestructive testing applied to wood-based materials, steel, concrete, and masonry. (Cross-listed course offered as CE 536, MSE 549).
- 592 Transmission Electron Microscopy 3** Development of the principles and applications of electron optics in microscopy.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Engineering Science

Degree offered: Doctor of Philosophy (Engineering Science)

Faculty working with graduate students: 32

Graduate students: 32

Graduate students receiving assistantships or scholarships: 90%

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Program Description

These interdisciplinary programs are administered through the College of Engineering and Architecture's Office of the Associate Dean of Research and Graduate Programs, with students typically advised and funded through one of several departments in the College. The interdisciplinary nature of these degrees provides considerable flexibility in designing programs of study tailored to the specialized needs of each student. Areas of specialization include (but are not limited to): biological systems engineering, atmospheric research, materials science and engineering, and bioengineering. These students often work in one of our interdisciplinary centers such as: Bioengineering Research Center (BRC), Center for Environmental, Sediment, and Aquatic Research (CESAR), Center for Environmental Education and Outreach (CEREO), Center for Materials Research (CMR), Engineering Education Research Center (EERC), Laboratory for Atmospheric Research (LAR), and the Wood Materials Research Lab (WMEL).

Qualifying exams (written); dissertation prospectus

Program Description

The Department of English at Washington State University offers graduate programs leading to the degrees of Master of Arts (M.A.) and Doctor of Philosophy (Ph.D.). Providing opportunities for diverse coursework and extensive pedagogical training, these programs emphasize interpretive and critical thinking, breadth of disciplinary preparation, grounding in current theory and methodology, and respect for the value of multiple perspectives. Students may elect to concentrate either on literary study (British, American, and postcolonial Anglophone literatures) or on rhetoric and composition. The English Department also participates in Washington State's interdisciplinary American Studies program, which offers opportunities for M.A. and Ph.D. students to take specialized seminars in American Studies. All students admitted to the various M.A. and Ph.D. programs will have been carefully selected from pools of applicants. They are expected to pursue their degree programs with success and to earn the M.A. degree in two years and the Ph.D. in four. The final oral examination - the culmination of all degree programs - is understood to be a conversation among colleagues, a forum in which the candidate discusses his or her own scholarly goals and asks questions as well as answering them. The intent is that it serve as a welcome into the profession of English studies.

Degree Description

Students entering the Ph.D. program in English are expected to

have completed a master's degree in English or in a related field of study at an accredited college or university, and to show promise of doing excellent work at the doctoral level. Students who complete a master's degree at WSU must reapply for admission to the Ph.D. program. Ph.D. candidates must demonstrate general competence in two foreign languages or advanced competence in one (see Language Proficiency Requirements, below). All doctoral students are expected to take part actively in planning their own literary and language programs and in meeting deadlines set by the department and by the WSU Graduate School. The objective of the Ph.D. program - including concentrations either in literature or in rhetoric and composition - is to prepare scholars for employment in a wide variety of post-secondary institutions of learning by providing both generalized and specialized training in literary/cultural theory and criticism, as well as opportunities to develop critical and research skills in literary and intellectual history, rhetorical theory, genre studies, composition studies, pedagogical theory, linguistics, and other related fields. The Ph.D. candidate's course of study is not designed to confront the student with every significant piece of writing in the respective field (i.e., English and American literature or rhetoric and composition). Rather, the coursework aims to produce mature critics and scholars who are widely read in English and American literature, knowledgeable about the methods of systematic scholarship, and competent to function professionally, not only in the modern university, but also in related research institutions such as historical societies, museums, and publishing firms.

ENGL

501 Seminar in the Teaching of Writing: Methodology of Composition 3 Development of a workable definition of the methods of composing through a review of relevant research and problem-solving exercises.

- 502 Seminar in the Teaching of Writing: Contemporary Theories 3** Course Prerequisite: ENGLISH 501. Contemporary theories of composition and their application to the classroom.
- 506 Seminar in 16th Century English Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 507 Shakespeare 3** Plays, poems, criticism, and background materials.
- 508 Seminar in Assessment of Writing 3** Problems involved in the diagnosis and assessment of student writing.
- 509 Seminar in Classical Rhetoric and its Influences 3** Study of GREEK and Roman rhetorical theories and their influences.
- 510 Backgrounds of American Literature 3** Studies of American writing in cultural contexts.
- 511 Seminar in 17th and 18th Century American Literature 3**
- 512 Introduction to Graduate Study 3**
- 513 Theory and Method in American Studies 3** Major theories and methods currently used by American studies scholars; key concepts in cultural analysis. (Cross-listed course offered as AMER ST 513, ENGLISH 513, HISTORY 513).
- 514 Seminar in 20th Century American Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 515 Contemporary Theories of Rhetoric 3** Contemporary critical theory and cultural studies and reconsiderations of suasive discursive practices.
- 521 Seminar in British Romantic Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 522 Seminar in Victorian Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 525 Seminar in English Literature of the 17th Century 3** May be repeated for credit; cumulative maximum 6 hours.
- 527 Seminar in English Literature of the Restoration and 18th Century 3** May be repeated for credit; cumulative maximum 6 hours.
- 529 Seminar in 19th Century American Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 531 Administering a Writing Program 3** Combining theory and practice in writing program supervision and management. Interns will work under direct faculty supervision.
- 532 Teaching Writing to Nontraditional Students 3** Course Prerequisite: ENGLISH 501. Theory and practice of the teaching of basic writers.
- 534 Theories and Methods of the Teaching of Technical and Professional Writing 3** Historical and theoretical bases for production of scientific discourse; training in its practical applications.
- 543 Phonology 3** Technical introductions to the analysis of the sound systems of human languages. Credit not granted for both ENGLISH 443 and 543.
- 544 Syntax 3** Technical introduction to the generative analysis of sentence structure with a focus on English. Credit not granted for both ENGLISH 444 and 544.
- 546 Topics in Teaching English as a Second Language 3** May be repeated for credit; cumulative maximum 6 hours. May be repeated for credit; cumulative maximum 6 hours. Topics and controversies related to second language acquisition theory and pedagogy.

- 548 Seminar in Critical and Cultural Theory 3** May be repeated for credit; cumulative maximum 6 hours. Critical and cultural theory relevant to advanced literary studies and /or the advanced study of rhetoric and composition.
- 549 Seminar in 20th Century British Literature 3** May be repeated for credit; cumulative maximum 6 hours.
- 550 Seminar in Poetry or Non-fiction Prose 3** May be repeated for credit; cumulative maximum 6 hours. Historical and generic studies in poetry and non-fiction prose.
- 554 History of the English Language 3** Language related to the origin, history, and literature of its speakers. Credit not granted for both ENGLISH 454 and ENGLISH 554.
- 567 Seminar in Prose Fiction 3** May be repeated for credit; cumulative maximum 6 hours. Historical and generic studies of prose fiction.
- 573 Seminar in American Literature 3** May be repeated for credit; cumulative maximum 12 hours. Major topics and figures.
- 580 Seminar in Medieval Literature 3** May be repeated for credit; cumulative maximum 6 hours. The Literature of Western Europe from 450 to 1500.
- 584 English Literature of the 16th Century 3** Advanced study of English Renaissance literature, including More, Sidney, Spenser, Marlowe, and Shakespeare, in age of Humanism and Reformation. Credit not granted for both ENGLISH 484 and ENGLISH 584.
- 590 Research in English Studies 1** May be repeated for credit; cumulative maximum 6 hours. Directed reading and interpretive problems in English studies.
- 591 Topics in Pedagogy 3** Theory and practice of designing and teaching courses in literature, rhetoric, composition, theory, or cultural studies.
- 595 Topics in English 3** May be repeated for credit; cumulative maximum 6 hours. Language, English pedagogy, or literature of special or current interest; reading theories, teaching of writing, current literary theories.
- 597 Topics in Composition and Rhetoric 3** May be repeated for credit; cumulative maximum 6 hours. Rhetoric and composition theory and praxis.
- 598 Teaching Apprenticeship 1** May be repeated for credit.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

English

Degree offered: Master of Arts in English

Faculty working with graduate students: 36

Graduate students: 21

Graduate students receiving assistantships or scholarships: 95%

Tests required: GRE (Verbal), GRE (Quantitative), TOEFL

Deadline:

Fall: January 10

Program Description

The Department of English at Washington State University offers graduate programs leading to the degrees of Master of Arts (M.A.) and Doctor of Philosophy (Ph.D.). Providing opportunities for diverse coursework and extensive pedagogical training, these programs emphasize interpretive and critical thinking, breadth of disciplinary preparation, grounding in current theory and methodology, and respect for the value of multiple perspectives. Students may elect to concentrate either on literary study (British, American, and postcolonial Anglophone literatures) or on rhetoric and composition. The English Department also participates in Washington State's interdisciplinary American Studies program, which offers opportunities for M.A. and Ph.D. students to take specialized seminars in American Studies. All students admitted to the various M.A. and Ph.D. programs will have been carefully selected from pools of applicants. They are expected to pursue their degree programs with success and to earn the M.A. degree in two years and the Ph.D. in four. The final oral examination - the culmination of all degree programs - is understood to be a conversation among colleagues, a forum in which the candidate discusses his or her own scholarly goals and asks questions as well as answering them. The intent is that it serve as a welcome into the profession of English studies.

Degree Description

Master of Arts in English: Literature Emphasis This broad program provides a solid foundation for more specialized doctoral study in English or American literature, American studies, comparative literature, or postcolonial anglophone literatures, as well as for professional training in such areas as law, information technology, divinity, journalism, and business. Students pursuing an M.A. in literature may choose either to write a thesis or to prepare a final

portfolio. Master of Arts in English: Rhetoric and Composition Emphasis This program allows students to specialize in the theory and pedagogy of composition. The degree is designed to prepare candidates for teaching positions at the college level or for doctoral programs with a specialization in composition and rhetoric. Language proficiency requirements are based on the candidate's expected needs and may be met by linguistics or other language studies. Candidates in this degree option must fulfill the following requirements.

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Entomology

Degree offered: Doctor of Philosophy (Entomology)

Faculty working with graduate students: 28

Graduate students: 30

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI, IELTS

Deadline: Fall: March 25

Spring: October 25

Requirements

Collegiate teaching experience is required. This can include the preparation, introductory remarks and conduct of at least three lecture or lab sessions for an entomology course. Doctoral students are required to participate in at least five 1-credit seminars. Courses: Students may choose between GEOL 102, Soils 413, Phys 101 or Phys 102 for the Physical Science requirement. Students may choose between ENTOM 340, 361, 545, 546, 548, 572 or IPM 201, 452 or 462 for the Applied Entomology requirement. Students may choose between ENTOM 539 or 540 for the Taxonomy requirement. Students may choose between MBIOS 303 or 514 for the Biochemistry requirement.

Program Description

The Entomology Program at Washington State University provides students the opportunity to work on real world issues that support

a safe, sustainable and abundant food supply; address human and animal health issues; and protect many other natural resources. Entomology graduate students are able to tailor their individual research program based on their specific interests. The Entomology Graduate Program encourages the interaction of students with leaders in the field of entomology locally, nationally and world-wide. We have an excellent history of producing graduates who go on to lucrative careers in their area of expertise and to professionally follow their passions.

Degree Description

The Department of Entomology offers graduate programs leading to Doctoral and Master of Science degrees. The curriculum provides the opportunity to study the basic and applied aspects of the science. Facilities and training are available for graduate study in major areas of entomology, including (but not limited to) apiculture; behavior; integrated biological control and sustainable pest management; ecology; forest entomology; insect/plant interactions; medical/veterinary entomology; population genetics; physiology; systematic; biological diversity and environmental toxicology. Departmental faculty, adjunct faculty, and affiliate faculty may all serve as student advisors. Faculty are housed both on campus and at Research and Extension Centers throughout the state; the ability to significantly interact with both on- and off-campus advisors and mentors offers students opportunities and perspectives not available in most programs. We maintain strong cooperative interactions with the USDA ARS lab in Yakima, Washington. Students whose major advisor resides at a Research and Extension Center (Wenatchee, Prosser, Puyallup, Mt. Vernon or USDA Wapato) typically come to Pullman for at least two semesters then relocate to the center where they will conduct their research and take the remainder of their coursework via AMS/WECN. Each student's program of study is individualized based on their research interests, prior academic experience, and collaboration with their major advisor.

Training and Professional Development Opportunities

Students have access to excellent labs and greenhouse facilities on the Pullman campus and at Research and Extension centers located throughout Washington State. Students are encouraged to attend Entomological Society of America meetings, as well as other professional meetings, where they present their research, and learn from other scientists in their chosen field.

Post-Graduate Employment Opportunities

New opportunities open daily for entomology graduates that include: federal government agencies (EPA, USDA, APHIS); state departments of agriculture and ecology; state agricultural research stations; university extension service; agrichemical company field representatives in research and sales; agricultural consulting firms; private agribusiness firms; timber and seed production companies; international development agencies; pest control operators; parkland and golf course pest management specialists; mosquito abatement districts; weed control districts; food processing industry; ornamental plant protection; public health service; industrial pest control consultant; the armed forces and homeland security.

Post-Graduate Career Placements

The Entomology Department has excellent record of career placement for its graduates nationally and internationally. Our

graduates have found careers in teaching, research and extension at colleges and universities; with federal and state agencies (e.g. USDA, FDA, and Washington State Department of Agriculture); in private industry; entrepreneurial endeavors; pesticide education programs; and forensics laboratories.

Faculty

Carol Anelli, Elizabeth Beers, Carol Black, Jay Brunner, Allan Felsot, Stephen Garczynski, Laurel Hansen, Vincent Hebert, David Horton, David James, Andrew Jensen, Vincent Jones, Peter Landolt, Laura Lavine, Bethany Marshall, Joseph Munyaneza, Jeb Owen, Merrill Peterson, Gary Piper, Walter Sheppard, William Snyder, John Stark, Daniel Suomi, Lynell Tanigoshi, Thomas Unruh, Doug Walsh, Terry Whitworth and Richard Zack.

BIOL

- 352 Cell Physiology 3** Course Prerequisite: BIOLOGY 107; CHEM 345. Function and control at the cell-tissue level.
- 372 General Ecology 4 (3-3)** Course Prerequisite: BIOLOGY 106; CHEM 102 or 105. Relationship of organisms with physical and biotic components of their environment at the population, community, and ecosystem level.

CHEM

- 332 Physical Chemistry 3** Course Prerequisite: MATH 273 with a C or better; MATH 220 with a C or better; PHYSICS 202 with a C or better. Elementary quantum theory; molecular structure and spectra; bonding theory; reaction rates; photochemistry and radiation chemistry; energy states and statistical thermodynamics.

ENTOM

- 340 Agricultural Entomology 3 (2-3)** Course Prerequisite: BIOLOGY 106 or 107. Control, identification, and biology of insects and related arthropods. Course equivalent to OSU's Ent 311 and UI's Ent 322.
- 343 General Entomology 3** Biology, natural history, and importance of insects and related arthropods.
- 361 Honey Bee Biology 3** Biology of the honey bee, including behavior, genetics, evolution, pollination, sociality, and beekeeping practices.

GEOL

- 102 Physical Geology 4 (3-3)** Course Prerequisite: Certified major in sciences, engineering, or in the Honors College. Modern concepts of earth science; mineral rock, resource, and map study. Field trip required. Credit not granted for more than one of GEOLOGY 101, 102, 180.

Integrated Pest Management

IPM

- 201 Introduction to Pest Management in a Quality Environment 2** Pest management to maximize plant protection and safeguard the quality of the environment.
- 452 Pesticides and the Environment 2** Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.
- 462 Systems of Integrated Pest Management 3 (2-3)** Utilization of the systems approach in agricultural pest management; design, implementation, and analysis of IPM programs for selected crops.

Integrated Pest Management

MBIOS

- 301 General Genetics 4** Course Prerequisite: BIOLOGY 106 or 120; BIOLOGY 107; CHEM 101 or 105; CHEM 102 or 106. Principles of modern and classical genetics. (Cross-listed course offered as MBIOS 301, BIOLOGY 301).
- 303 Introductory Biochemistry 4** Course Prerequisite: CHEM 102 or 345. Modern biochemistry for undergraduates in the biological sciences.

Integrated Pest Management

PHYS

- 101 General Physics 4 (3-3)** Course Prerequisite: MATH 107 or 108 with a grade of C or better, ALEKS math placement score 60% or higher, or passing MATH 140, 171, 202, or 206. Algebra/trigonometry-based physics; topics in mechanics, wave phenomena, temperature, and heat; oriented toward non-physical science majors. Credit not granted for more than one of PHYSICS 101, 201, or 205.
- 102 General Physics 4 (3-3)** Course Prerequisite: PHYSICS 101 with a grade of C or better; MATH 107 or 108 with a grade of C or better, ALEKS math placement score 60% or higher, or passing MATH 140, 171, 202, or 206. Algebra/trigonometry-based physics; topics in electricity, magnetism, optical phenomena, relativity, and quantum theory; oriented toward non-physical science majors. Credit not granted for more than one of PHYSICS 102, 202, or 206.

SOILS

- 413 Soil Physics 3 (2-3)** Characterization of soil properties including water content and potential and hydraulic conductivity; modeling water, solute transport, erosion and contamination of groundwater.
- 500 Seminar 1** May be repeated for credit.
- 501 Proposal Defense Seminar 2** Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.
- 504 Experimental Methods in Plant Physiology 3 (2-3)** Advanced techniques and instrumental methods applicable to research in plant physiology.
- 509 Plant Anatomy 4 (2-6)** Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.
- 512 Molecular Mechanisms of Plant Development 3** Physiology of growth; metabolism during development and reproduction.
- 513 Plant Metabolism 3** Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.
- 514 Fish Genetics 2** Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.
- 517 Stress Physiology of Plants 3** Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.
- 519 Introduction to Population Genetics 3** Survey of basic population and quantitative genetics.
- 520 Conservation Genetics 2** Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.
- 521 Quantitative Genetics 3** Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.
- 531 Principles of Systematic Biology 3** Systematic theory; history and current views; approaches to phylogenetic analysis and classification.
- 533 Modern Methods in Phylogenetics 4 (2-6)** Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.
- 537 Plant Cell Biology 3** Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.
- 540 Stable Isotope Theory and Methods 3 (2-3)** Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 548 Evolutionary Ecology of Populations 3** Evolutionary dynamics of natural populations and the co-evolution of species.
- 556 Biochemical Adaptation 3** Relationships between enzyme/macromolecule adaptation and animal performance.
- 559 Hormones, Brain and Behavior 3** Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.
- 560 Plant Ecophysiology 3** Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.
- 561 Environmental Physiology 3** Individual and evolutionary adaptations to changing environments with emphasis on recent literature.
- 562 Community Ecology 3** Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.
- 563 Field Ecology 2 (0-6)** Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.
- 564 Molecular Ecology and Phylogeography 3** Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.
- 565 Ecology and Evolution of Disease 3** Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.
- 566 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 567 Ecological Restoration 3** Introduction to major issues in restoration ecology; major ecological dimensions of restoration.
- 568 Conservation Ecology 3** Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.
- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4 (3-3)** Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.

- 575 Systems Biology of Reproduction** 3 Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.
- 576 Epigenetics and Systems Biology** 3 Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences** 3 Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Comparative Biology of Social Traditions** 3 Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing** 2 Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching** 2 Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology** V 1-3 May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences** 1 May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I** 1 May be repeated for credit. Literature and problems.
- 597 Teaching Practicum** V 1-4 May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar** 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Advanced Inorganic Chemistry I** 3 Periodic table survey, typical compounds and their reactivity; models and reactivity, acid-base, oxidation-reduction, and electronic structure contributions.
- 503 Advanced Topics in Inorganic Chemistry** V 1-3 May be repeated for credit. Recent significant developments.
- 509 Chemical Group Theory** 3 Mathematical definitions of groups and representations, applications to chemical structure and spectra, ligand field theory, chemical reactions and selection rules.
- 510 Introduction to Proteomics** 2 Techniques and applications for the analysis of the proteome. Recommended preparation: MBIOS 303 or equivalent.
- 512 Bioanalysis** 2 Methods for the measurement of biological compounds.
- 514 Mass Spectrometry** 2 Current methods, techniques and interpretation of mass spectrometric analysis. Recommended preparation: CHEM 425 or equivalent.
- 517 Chromatography** 2 Recommended preparation: CHEM 425 or equivalent.
- 518 Electrochemistry** 2 Recommended preparation: CHEM 425 or equivalent.
- 520 Advanced Analytical Chemistry** 3 Statistics in chemical analysis; sampling; control of contamination and losses in analysis; electrochemical methods; separation in analysis; spectroscopic techniques. Recommended preparation: CHEM 425 or equivalent.
- 521 Radiochemistry and Radiotracers** 2 Graduate-level counterpart of CHEM 421; additional requirements. Recommended preparation: CHEM 425 or equivalent.
- 522 Radiochemistry Laboratory** 1 (0-3) Graduate-level counterpart of CHEM 422; additional requirements. Required preparation must include CHEM 222, CHEM 331, and PHYSICS 202 or equivalent.
- 527 Environmental Chemistry** 2 Natural water chemistry, AGRI processes, kinetics, thermodynamics, modeling in lake, river, and sea water.
- 529 Selected Topics in Analytical Chemistry** V 1-3 May be repeated for credit. Selected current developments.
- 531 Advanced Physical Chemistry I** 3 Classical physical chemistry including basic thermodynamics and kinetics; an introductory discussion of surface chemistry and electrochemistry. Recommended preparation: CHEM 331 or equivalent.

- 532 Advanced Physical Chemistry II 3** Introduction to quantum mechanics; postulates of quantum mechanics; exact solutions and approximation methods. Recommended preparation: CHEM 332 or equivalent.
- 534 Chemical Statistical Mechanics 3** Statistical theory of thermodynamic variables and chemical equilibrium; calculation of equilibrium properties from spectral data; fluctuations about equilibrium; quantum statistics.
- 536 Quantum Chemistry 3** Course Prerequisite: CHEM 532. Quantum mechanics applied to chemical problems: states of atoms and molecules, transitions and spectra, ladder operators and many electron methods.
- 537 Advanced Topics in Physical Chemistry V 1-3** May be repeated for credit. Selected subjects; irreversible thermodynamics; chemical bonding; NMR; ligand field theory; x-ray diffraction; neutron diffraction.
- 540 Physical Organic Chemistry 3** Course Prerequisite: CHEM 542. The major classes of organic reaction mechanisms and their significance; kinetics and introductory theory.
- 542 Advanced Organic Chemistry 3** Synthesis of organic compounds; recent developments from current literature.
- 543 Bioorganic Chemistry 3** Course Prerequisite: CHEM 542. Chemistry of biological systems, medicinal chemistry, protein chemistry, enzyme mechanisms and inhibitors.
- 544 Advanced Topics in Organic Chemistry V 1-3** May be repeated for credit. Current research in organic chemistry.
- 545 Synthetic Organic Chemistry 3** Course Prerequisite: CHEM 542. Modern synthetic methods and strategies; detailed reaction mechanisms, reaction scope and issues in catalysis will be discussed.
- 546 Spectroscopic Identification of Organic Compounds 3** Structural interpretation of mass spectrometry and IR, UV-VIS and NMR spectrometry of small molecule organic compounds.
- 550 Special Topics in Nuclear Processes and Radioactive Waste Management V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By instructor permission. Fundamental chemistry of the nuclear industry, chemical processing and waste management.
- 555 Teaching Chemistry 1** Teaching chemistry; workshops for new graduate teaching assistants in chemistry focusing on tutorials and labs.
- 564 Molecular Phenomena 3** Phenomena which yield information on structures, energy levels, and interactions of molecules in solid, liquid, and gaseous phases.
- 572 Enzyme Reaction Mechanisms 3** Course Prerequisite: CHEM 542. Methods used to explore enzyme mechanisms; how enzymes catalyze reactions; overview of enzyme co-factors and exploration of differing classes of enzyme catalyzed reactions.
- 581 Environmental Chemistry I 3** Chemistry of natural and pollutant species and their reactions in the atmospheric environment.
- 590 Introduction to Research Topics 1** Presentation and description of research areas and projects of current interest to faculty.
- 592 Seminar in Analytical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in analytical chemistry taken from research in progress or current literature.
- 593 Seminar in Physical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in physical chemistry taken from research in progress or current literature.
- 594 Seminar in Organic Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in organic chemistry taken from research in progress or current literature.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 540 Taxonomy of Immature Insects V 2-4** Identification of eggs, larvae, nymphs, and pupal stages of insects. Insect collection required.
- 548 Medical and Veterinary Entomology 3** Biology and ecology of parasitic arthropods and their direct impacts on human and animal health; transmission of pathogens. Credit not granted for both ENTOM 448 and ENTOM 548.
- 550 Insect Physiology 3** General principles of insect physiology; the mechanisms of vital processes in insects; organ, cellular, subcellular, chemical and physical levels. Required preparation must include BIOLOGY 332, 352, CHEM 345, ENTOM 340, or 343.
- 555 Agricultural Chemical Technology for Crop Protection & Production 3** Mechanistic examination of agricultural chemical technology; synthetic and biological pesticides and fertilizers; mechanism of biological activity; deployment; management.

- 556 Insecticides: Toxicology and Mode of Action** 1 Insecticides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 557 Herbicides: Toxicology and Mode of Action** 1 Herbicides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 558 Pesticide Topics** 1 Current issues concerning pesticides in terms of toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 590 Special Topics in Entomology** V 1-4 May be repeated for credit; cumulative maximum 10 hours. Credit not granted for both ENTOM 490 and ENTOM 590.
- 593 Seminar** 1 May be repeated for credit. Reporting and discussing problems and research in entomology.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 505 Geophysics** 4 (3-3) Theory and application of geophysical methods for hydrology, environmental, engineering, exploration, and structural geology; review of techniques. (Cross-listed course offered as GEOLOGY 405).
- 520 Advanced Topics in Sedimentology** 3 (2-3) May be repeated for credit; cumulative maximum 6 hours. Modern aspects of sedimentary rocks. Field trip required.
- 521 Clastic Depositional Systems** 3 (2-3) Clastic sedimentary environments; architectural elements and facies analysis. Field trip required.
- 523 Advanced Topics in Stratigraphy** 3 May be repeated for credit.
- 525 Carbonate Depositional Systems** 3 (2-3) Modern carbonate environments and processes; ancient carbonate rock sequences; carbonate platform-to-basin transition; diagenesis of carbonate rocks. Field trip required.
- 538 Orogenic Systems** I 3 Field-base course examines tectonic processes active in the northern Cordillera. Field trip required and final research paper.
- 540 Tectonics** 3 Nature and origin of the Earth's major tectonic features.
- 541 Structural Analysis** 3 (2-3) Structural analysis of complexly deformed rocks in orogenic belts. Field trip required.
- 545 Astrobiology** 3 Origin, evolution, distribution and future of life in the universe; fundamental concepts of life and habitable environments on Earth and other planetary bodies within and outside of the solar system. Credit not granted for both GEOLOGY 445 and GEOLOGY 545.
- 550 Advanced Mineralogy** 3 Elements of crystal chemistry and crystal physics.
- 552 Analytical Methods in Earth Sciences** 3 (2-3) Theory and practical experience in EMPA, XRD, XRF, and ICPMS analysis.
- 560 Advanced Igneous Petrology** 3 (2-3) Origin, evolution, and tectonic significance of igneous rocks. Field trip required.
- 562 Watershed Biogeochemistry** 3 Sources, transformations, fates and impacts of biogeochemically important compounds as they move downstream through watersheds to the coastal zone.
- 567 Volcanology** 3 (2-3) Volcanic process, eruption mechanisms, volcanic deposits, hazard assessment. Field trip required. Credit not granted for both GEOLOGY 467 and GEOLOGY 567.
- 578 Groundwater Geobiology** 3 (2-3) Interaction of groundwater geology and the environment including microbial populations with emphasis on microbial transport in the sub-surface and bioremediation approaches.
- 579 Groundwater Geochemistry** V 2-4 May be repeated for credit; cumulative maximum 4 hours. Organic and inorganic aqueous geochemistry; controls on groundwater contaminant fate.
- 583 Radiogenic Isotopes and Geochronology** 3 Radiogenic isotopes and their uses as chronometers (radiometric dating) and as tracers of earth evolution and differentiation.
- 584 Stable Isotope Geochemistry** 3 Principles and applications of isotope geochemistry in the geological sciences.
- 588 Methods in Radiogenic Isotope Geochemistry** 3 (1-6) Course Prerequisite: GEOLOGY 583. Laboratory-based course in modern analytical methods in radiogenic isotope geochemistry.
- 595 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 596 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 597 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 598 Seminar** 1 May be repeated for credit; cumulative maximum 3 hours. Research papers presented by students, faculty, and visiting scientists on geological research. Credit not granted for both GEOLOGY 498 and GEOLOGY 598.

- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 552 Pesticides and the Environment 2** Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.
- 501 Cell Biology 3** Cellular structure and function; membrane biochemistry and transport; cell-cell communication; regulation of cell cycle and apoptosis; cell signaling; cancer biology. Credit not granted for both MBIOS 401 and MBIOS 501. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 529 highly recommended.
- 503 Advanced Molecular Biology I 3** DNA replication and recombination in prokaryotes and eukaryotes; recombinant DNA methods and host/vector systems; genome analysis; transgenic organisms. Recommended preparation: Introductory genetics and biochemistry coursework.
- 504 Advanced Molecular Biology II 3** Gene expression and regulation in prokaryotes and eukaryotes, including transcription, RNA processing, and translation; chromatin structure; DNA repair. Recommended preparation: Introductory genetics and biochemistry coursework.
- 505 Cell Biology of Disease 3** Course Prerequisite: MBIOS 301; MBIOS 303. Discussion of human diseases characterized by cell biological defects, using popular press and research articles as a source of information. Credit not granted for both MBIOS 405 and 505.
- 507 Critical Analysis of Scientific Literature 2** Course Prerequisite: MBIOS 503; MBIOS 513 or concurrent enrollment. Dissection and discussion of current molecular bioscience papers to foster development of critical reading of primary literature.
- 508 Quantitative Approaches in Molecular Biosciences 2** Quantitative methods and techniques using examples from the current molecular biosciences primary literature. Recommended preparation: One semester of calculus.
- 513 General Biochemistry 3** Structure and function of proteins, nucleic acids and biological membranes; principles of enzymology; biochemical methodology. Credit not granted for both MBIOS 413 and MBIOS 513. Recommended preparation: Introductory biochemistry coursework.
- 514 General Biochemistry 3** Course Prerequisite: MBIOS 513. Metabolism of carbohydrates, proteins, fats, bioenergetics; photosynthesis; control of metabolic processes. Credit not granted for both MBIOS 414 and MBIOS 514.
- 528 Molecular and Cellular Reproduction 3 (2-2)** State of the art concepts of the molecular, cellular, and physiological aspects of mammalian reproduction. (Cross-listed course offered as MBIOS 528, ANIM SCI 558).
- 529 Selected Topics in Cell Biology 1** Selected topics in cell biology using current literature. Recommended preparation: Concurrent enrollment with MBIOS 501 highly recommended.
- 540 Immunology 3** Principles of basic immunology. Credit not granted for both MBIOS 440 and MBIOS 540. Recommended preparation: Introductory microbiology coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 541 Research Seminar 1** May be repeated for credit; cumulative maximum 2 hours. Literature reviews and research reports.
- 542 General Virology 3** The biology of bacterial, animal, and plant viruses. Credit not granted for both MBIOS 442 and MBIOS 542. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 548 Selected Topics in Immunology & Virology 1** May be repeated for credit. Selected topics in immunology and virology using the current literature. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: Concurrent enrollment with MBIOS 540 or 542.
- 549 Seminar in Immunology 1** May be repeated for credit; cumulative maximum 2 hours. Seminar series on advances in immunology. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: MBIOS 540 or concurrent enrollment.
- 550 Microbial Physiology 3** Basic microbial physiology and its relevance to the processes of applied microbiology. Credit not granted for both MBIOS 450 and MBIOS 550. Recommended preparation: Introductory genetics, biochemistry or microbiology coursework.
- 561 Biochemical Signaling in Plants, Animals and Microorganisms 3** Course Prerequisite: MBIOS 513. New research on intra and extra cellular biochemical signaling, including communication in plants and hormone action in animals. (Cross-listed course offered as MBIOS 561, MPS 561).
- 566 Physical Biochemistry 3** Techniques for the study of biological structure and function; spectroscopy, magnetic resonance, diffusion, sedimentation, electron microscopy, diffraction and scattering. Credit not granted for both MBIOS 466 and MBIOS 566. Recommended preparation: Introductory biophysical or physical chemistry coursework.

- 568 Advanced Topics in Molecular Biosciences V** 1-3 May be repeated for credit. Course Prerequisite: MBIOS 513 or concurrent enrollment. Recent research in selected areas of molecular biosciences.
- 574 Protein Biotechnology** 3 Biotechnology related to the isolation, modification and large scale commercial production, patenting and marketing of useful recombinant proteins and products. (Cross-listed course offered as MBIOS 574, CHE 574). Recommended preparation: MBIOS 513.
- 578 Bioinformatics** 3 (2-3) Computer analysis of protein and nucleic acid sequences, functional genomics and proteomics data; modeling biological networks and pathways. Credit not granted for both MBIOS 478 and MBIOS 578. Recommended preparation: Introductory genetics or biochemistry coursework.
- 579 Molecular Biosciences Seminar V** 1-2 May be repeated for credit; cumulative maximum 10 hours. Required of all graduate students in molecular biosciences.
- 580 Science Information Literacy** 2 Efficient methods to locate and effectively use a wide variety of information resources that will be useful in the work world.
- 583 Professional Skills Seminar** 1 Covers many aspects of professionalism, including professional behavior, professional dress, and professional sensitivity in social settings.
- 584 Medical Genetics** 3 The mechanisms of human heredity and how these mechanisms can influence human health.
- 593 Research Proposal** 2 May be repeated for credit; cumulative maximum 4 hours. Written and oral presentation of an area in molecular biosciences. May be repeated for credit; cumulative maximum 4 hours.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Graduate Seminar** 1 Introduction to graduate and interdisciplinary research.
- 514 Optoelectronics Lab I** 1 (0-3) May be repeated for credit; cumulative maximum 3 hours. Experiments with optical systems: Imaging, interference, coherence, information storage/processing, gas and solid state lasers, optical fibers, and communications systems.
- 515 Optoelectronics Lab II V** 1 (0-3) to 3 (0-9) May be repeated for credit; cumulative maximum 3 hours. Experiments in optical physics, physical properties of light, laser physics, waveguides, quantum confined semiconductor structures and ultrafast dynamics and nonlinear optics.
- 521 Classical Mechanics I** 3 Laws of motion as developed by Newton, d'Alembert, Lagrange, and Hamilton; dynamics of particles and rigid bodies.
- 522 Classical Mechanics II** 3 Continuation of PHYSICS 521. Classical mechanics of liquids and deformable solids; stress, deformation and strain, flow, oscillations and waves.
- 533 Thermal and Statistical Physics I** 3 Thermodynamic laws and potentials, kinetic theory, hydrodynamics and transport coefficients; introduction to statistical mechanics, ensembles, partition functions.
- 534 Thermal and Statistical Physics II** 3 Phase transitions and critical phenomena, Ginzburg-Landau theory, Bose-Einstein condensation, superfluids, Fermi systems, low-temperature expansions.
- 541 Electromagnetic Theory** 3 Special relativity and the classical electromagnetic field; emission, propagation, and absorption of electromagnetic waves.
- 542 Electrodynamics** 3 Interaction of matter and electromagnetic radiation; classical and quantum electrodynamics.
- 545 Nonlinear Optics** 3 Nonlinear wave propagation theory applied to several nonlinear-optical phenomena; experimental techniques that probe a material's nonlinearity.
- 546 Quantum Electronics** 3 The physics of lasers and of coherent optical radiation generation and propagation.
- 550 Quantum Theory I** 3 Introduction to quantum theory; physical and mathematical foundations; application to atomic systems.
- 551 Quantum Theory II** 3 Symmetry and invariance; angular momentum theory; approximation methods.
- 552 Quantum Theory III** 3 Scattering theory; relativistic wave mechanics; quantum field theory.
- 561 Atomic and Molecular Physics** 3 Physics of atoms and molecules using quantum theory.
- 563 Physics of the Solid State** 3 Lattice vibrations and defects; ionic and electronic conductivities; band theory; magnetic properties; luminescence.
- 566 Biological Physics** 3 Fundamental physics and thermodynamics of the cell; mechanics of biomolecular machines. Credit not granted for both PHYSICS 466 and PHYSICS 566.
- 571 Methods of Theoretical Physics** 3 Mathematical methods for theoretical physics; linear algebra, tensor analysis, complex variables, differential equations, integral equations, variational calculus, and group theory.

- 575 Advanced Solid State Physics 3** Quantum theory of solids; Green's functions, correlation functions and other field-theoretic methods; magnetism, superconductivity and transport properties.
- 581 Advanced Topics 3** May be repeated for credit; cumulative maximum 12 hours. Topics of current interest in advanced physics. (Cross-listed course offered as PHYSICS 581, ASTRONOM 581).
- 590 Seminar 1** May be repeated for credit.
- 592 Wave Propagation Seminar 2** May be repeated for credit; cumulative maximum 4 hours. Waves in the continuum; elastic, plastic, and hydrodynamic waves; shock waves.
- 598 Teaching Undergraduate Physics Laboratories 1** May be repeated for credit; cumulative maximum 4 hours. Principles and practices of teaching, planning and management of undergraduate physics laboratories; choice and care of equipment.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Seminar 1** May be repeated for credit. Presentation of research information.
- 502 Advanced Topics in Soils V 1-3** May be repeated for credit; cumulative maximum 6 hours. Interpretation, presentation, and discussion of current research on soils, uses, and management.
- 503 Advanced Soil Analysis V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Soil research techniques; application of modern instrumentation to soil analysis.
- 505 Teaching Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised experience in classroom teaching; classroom preparation for lectures, discussions, laboratories; preparation and grading of exams.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 513 Environmental Soil Physics 3 (2-3)** Physical properties of soils and their relationships to moisture, aeration, and temperature; plant-soil-atmospheric relationships; solute transport and soil salinity. Recommended preparation: SOIL SCI 201 and general physics.
- 514 Environmental Biophysics 2** Physical environment of living organisms (temperature, humidity, radiation, wind); heat and mass exchange and balance in plant and animal systems. Recommended preparation: Introductory biology, physics, and calculus.
- 515 Environmental Biophysics Laboratory 1 (0-3)** Course Prerequisite: Soil Sci 514 or concurrent enrollment. Experimental methods and procedures in environmental measurements; temperature, wind, radiation, and humidity measurements in biological environments.
- 521 Physical Chemistry of Soils 3** Chemical equilibrium and kinetics of soil solution speciation, mineral precipitation and dissolution, adsorption and partitioning reactions, and ion exchange. Soil constituents; soil solutions: mineral equilibria; absorption reactions; acid/base reactions; oxidation-reduction; soil contaminants.
- 531 Soil Microbiology 3 (2-3)** Biology and significance of organisms inhabiting soil and their role in nutrient cycling, ecosystem function, agriculture, and bioremediation.
- 533 Advanced Vadose Processes 2** Methods and models for water, heat, vapor and solute transport in the vadose zone; transfer functions to describe solute transport; non-linear parameter estimation; fate and transport of water, heat, and solutes in the vadose zone; hydrological and geochemical processes in unsaturated subsurface materials. Recommended preparation: upper division or graduate course in soil physics or chemistry.
- 541 Soil-Plant-Microbial Interactions 3** Soil-plant-microbial relationships to plant nutrition, plant health, and environmental cleanup; rhizosphere chemistry and microbial ecology. Required preparation must include two upper-division courses in biology, microbiology or soils.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).

- 547 Soil Fertility Management 3** Philosophy of fertilizer recommendations based on soil and plant tissue testing; principles of fertilizer manufacture, placement and use. Required preparation must include introductory soils and upper-division soil fertility courses.
- 568 ArcGIS and Geospatial Analysis 4 (2-6)** Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 574 Remote Sensing and Geospatial Analysis 3 (1-4)** Digital image processing theory and geographic information systems applied to landscape analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.

- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Entomology

Degree offered: Master of Science in Entomology

Faculty working with graduate students: 28

Graduate students: 30

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), TOEFL, TOEFLI, GRE (Quantitative), GRE (Verbal), IELTS

Deadline: Fall: March 25

Spring: October 25

Requirements

Collegiate teaching experience is required. This can include the preparation, introductory remarks and conduct of at least three lecture or lab sessions for an entomology course. Master's students are required to participate in two 1-credit seminars. Course Information: Students may choose between GEOL 102, Soils 413, Phys 101 or Phys 102 for the Physical Science requirement. Students may choose between ENTOM 340, 361, 545, 546, 548, 572 or IPM 201, 452 or 462 for the Applied Entomology requirement. Students may choose between ENTOM 539 or 540 for the Taxonomy requirement. Students may choose between MBIOS 303 or 514 for the Biochemistry requirement.

Program Description

The Entomology Program at Washington State University provides students the opportunity to work on real world issues that support a safe, sustainable and abundant food supply; address human and animal health issues; and protect many other natural resources. Entomology graduate students are able to tailor their individual research program based on their specific interests. The Entomology Graduate Program encourages the interaction of students with leaders in the field of entomology locally, nationally and world-wide. We have an excellent history of producing graduates who go on to lucrative careers in their area of expertise and to professionally follow their passions.

Degree Description

The Department of Entomology offers graduate programs leading to Doctoral and Master of Science degrees. The curriculum provides the opportunity to study the basic and applied aspects of the science. Facilities and training are available for graduate study in major areas of entomology, including (but not limited to) apiculture; behavior; integrated biological control and sustainable pest management; ecology; forest entomology; insect/plant interactions; medical/veterinary entomology; population genetics; physiology; systematic; biological diversity and environmental toxicology. Departmental faculty, adjunct faculty, and affiliate faculty may all serve as student advisors. Faculty are housed both on campus and at research stations throughout the state; the ability to significantly interact with both on- and off-campus advisors and mentors offers students opportunities and perspectives not available in most programs. We maintain strong cooperative interactions with the USDA ARS lab in Yakima, Washington. Students whose major advisor resides at a Research & Extension Center (Wenatchee, Prosser, Puyallup, Mt. Vernon or USDA Wapato) typically come to Pullman for at least two semesters then relocate to the center where they will conduct their research and take the remainder of their coursework via AMS/WECN. Each student's program of study is individualized based on their research interests, prior academic experience, and collaboration with their major advisor.

Training and Professional Development Opportunities

Students have access to excellent labs and greenhouse facilities on the Pullman campus and at Research and Extension centers located throughout Washington State. Students are encouraged to attend Entomological Society of America meetings, as well as other professional meetings, where they present their research, and learn from other scientists in their chosen field.

Post-Graduate Employment Opportunities

New opportunities open daily for entomology graduates, including: federal government agencies (EPA, USDA, APHIS); state departments of agriculture and ecology; state agricultural research stations; university extension service; agrichemical company field representatives in research and sales; agricultural consulting firms; private agribusiness firms; timber and seed production companies; international development agencies; pest control operators; parkland and golf course pest management specialists; mosquito abatement districts; weed control districts; food processing industry; ornamental plant protection; public health service; industrial pest control consultant; the armed forces and homeland security.

Post-Graduate Career Placements

The Entomology Department has an excellent record of career placement for its graduates nationally and internationally. Our graduates have found careers in teaching, research and extension at colleges and universities; with federal and state agencies (e.g. USDA, FDA, and Washington State Department of Agriculture); in private industry; entrepreneurial endeavors; pesticide education programs; and forensics laboratories.

Faculty

Carol Anelli, Elizabeth Beers, Carol Black, Jay Brunner, Allan Felsot, Stephen Garczynski, Laurel Hansen, Vincent Hebert, David Horton, David James, Andrew Jensen, Vincent Jones, Peter Landolt, Laura Lavine, Bethany Marshall, Joseph Munyaneza, Jeb Owen, Merrill Peterson, Gary Piper, Walter Sheppard, William Snyder, John Stark, Daniel Suomi, Lynell Tanigoshi, Thomas Unruh, Doug Walsh, Terry Whitworth and Richard Zack.

BIOL

352 Cell Physiology 3 Course Prerequisite: BIOLOGY 107; CHEM 345. Function and control at the cell-tissue level.

372 General Ecology 4 (3-3) Course Prerequisite: BIOLOGY 106; CHEM 102 or 105. Relationship of organisms with physical and biotic components of their environment at the population, community, and ecosystem level.

CHEM

332 Physical Chemistry 3 Course Prerequisite: MATH 273 with a C or better; MATH 220 with a C or better; PHYSICS 202 with a C or better. Elementary quantum theory; molecular structure and spectra; bonding theory; reaction rates; photochemistry and radiation chemistry; energy states and statistical thermodynamics.

ENTOM

340 Agricultural Entomology 3 (2-3) Course Prerequisite: BIOLOGY 106 or 107. Control, identification, and biology of insects and related arthropods. Course equivalent to OSU's Ent 311 and UI's Ent 322.

343 General Entomology 3 Biology, natural history, and importance of insects and related arthropods.

361 Honey Bee Biology 3 Biology of the honey bee, including behavior, genetics, evolution, pollination, sociality, and beekeeping practices.

Integrated Pest Management

IPM

452 Pesticides and the Environment 2 Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.

462 Systems of Integrated Pest Management 3 (2-3) Utilization of the systems approach in agricultural pest management; design, implementation, and analysis of IPM programs for selected crops.

Integrated Pest Management

MBIOS

301 General Genetics 4 Course Prerequisite: BIOLOGY 106 or 120; BIOLOGY 107; CHEM 101 or 105; CHEM 102 or 106. Principles of modern and classical genetics. (Cross-listed course offered as MBIOS 301, BIOLOGY 301).

303 Introductory Biochemistry 4 Course Prerequisite: CHEM 102 or 345. Modern biochemistry for undergraduates in the biological sciences.

Integrated Pest Management

SOILS

413 Soil Physics 3 (2-3) Characterization of soil properties including water content and potential and hydraulic conductivity; modeling water, solute transport, erosion and contamination of groundwater.

500 Seminar 1 May be repeated for credit.

501 Proposal Defense Seminar 2 Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.

504 Experimental Methods in Plant Physiology 3 (2-3) Advanced techniques and instrumental methods applicable to research in plant physiology.

509 Plant Anatomy 4 (2-6) Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.

512 Molecular Mechanisms of Plant Development 3 Physiology of growth; metabolism during development and reproduction.

- 513 Plant Metabolism 3** Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.
- 514 Fish Genetics 2** Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.
- 517 Stress Physiology of Plants 3** Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.
- 519 Introduction to Population Genetics 3** Survey of basic population and quantitative genetics.
- 520 Conservation Genetics 2** Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.
- 521 Quantitative Genetics 3** Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.
- 531 Principles of Systematic Biology 3** Systematic theory; history and current views; approaches to phylogenetic analysis and classification.
- 533 Modern Methods in Phylogenetics 4 (2-6)** Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.
- 537 Plant Cell Biology 3** Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.
- 540 Stable Isotope Theory and Methods 3 (2-3)** Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 548 Evolutionary Ecology of Populations 3** Evolutionary dynamics of natural populations and the co-evolution of species.
- 556 Biochemical Adaptation 3** Relationships between enzyme/macromolecule adaptation and animal performance.
- 559 Hormones, Brain and Behavior 3** Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.
- 560 Plant Ecophysiology 3** Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.
- 561 Environmental Physiology 3** Individual and evolutionary adaptations to changing environments with emphasis on recent literature.
- 562 Community Ecology 3** Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.
- 563 Field Ecology 2 (0-6)** Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.
- 564 Molecular Ecology and Phylogeography 3** Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.
- 565 Ecology and Evolution of Disease 3** Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.
- 566 Mathematical Genetics 3** Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.
- 567 Ecological Restoration 3** Introduction to major issues in restoration ecology; major ecological dimensions of restoration.
- 568 Conservation Ecology 3** Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.
- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4 (3-3)** Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.
- 575 Systems Biology of Reproduction 3** Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.
- 576 Epigenetics and Systems Biology 3** Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).

- 581 Comparative Biology of Social Traditions** 3 Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing** 2 Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching** 2 Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology** V 1-3 May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences** 1 May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I** 1 May be repeated for credit. Literature and problems.
- 597 Teaching Practicum** V 1-4 May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar** 1 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Advanced Inorganic Chemistry I** 3 Periodic table survey, typical compounds and their reactivity; models and reactivity, acid-base, oxidation-reduction, and electronic structure contributions.
- 503 Advanced Topics in Inorganic Chemistry** V 1-3 May be repeated for credit. Recent significant developments.
- 509 Chemical Group Theory** 3 Mathematical definitions of groups and representations, applications to chemical structure and spectra, ligand field theory, chemical reactions and selection rules.
- 510 Introduction to Proteomics** 2 Techniques and applications for the analysis of the proteome. Recommended preparation: MBIOS 303 or equivalent.
- 512 Bioanalysis** 2 Methods for the measurement of biological compounds.
- 514 Mass Spectrometry** 2 Current methods, techniques and interpretation of mass spectrometric analysis. Recommended preparation: CHEM 425 or equivalent.
- 517 Chromatography** 2 Recommended preparation: CHEM 425 or equivalent.
- 518 Electrochemistry** 2 Recommended preparation: CHEM 425 or equivalent.
- 520 Advanced Analytical Chemistry** 3 Statistics in chemical analysis; sampling; control of contamination and losses in analysis; electrochemical methods; separation in analysis; spectroscopic techniques. Recommended preparation: CHEM 425 or equivalent.
- 521 Radiochemistry and Radiotracers** 2 Graduate-level counterpart of CHEM 421; additional requirements. Recommended preparation: CHEM 425 or equivalent.
- 522 Radiochemistry Laboratory** 1 (0-3) Graduate-level counterpart of CHEM 422; additional requirements. Required preparation must include CHEM 222, CHEM 331, and PHYSICS 202 or equivalent.
- 527 Environmental Chemistry** 2 Natural water chemistry, AGRI processes, kinetics, thermodynamics, modeling in lake, river, and sea water.
- 529 Selected Topics in Analytical Chemistry** V 1-3 May be repeated for credit. Selected current developments.
- 531 Advanced Physical Chemistry I** 3 Classical physical chemistry including basic thermodynamics and kinetics; an introductory discussion of surface chemistry and electrochemistry. Recommended preparation: CHEM 331 or equivalent.
- 532 Advanced Physical Chemistry II** 3 Introduction to quantum mechanics; postulates of quantum mechanics; exact solutions and approximation methods. Recommended preparation: CHEM 332 or equivalent.
- 534 Chemical Statistical Mechanics** 3 Statistical theory of thermodynamic variables and chemical equilibrium; calculation of equilibrium properties from spectral data; fluctuations about equilibrium; quantum statistics.
- 536 Quantum Chemistry** 3 Course Prerequisite: CHEM 532. Quantum mechanics applied to chemical problems: states of atoms and molecules, transitions and spectra, ladder operators and many electron methods.

- 537 Advanced Topics in Physical Chemistry V** 1-3 May be repeated for credit. Selected subjects; irreversible thermodynamics; chemical bonding; NMR; ligand field theory; x-ray diffraction; neutron diffraction.
- 540 Physical Organic Chemistry 3** Course Prerequisite: CHEM 542. The major classes of organic reaction mechanisms and their significance; kinetics and introductory theory.
- 542 Advanced Organic Chemistry 3** Synthesis of organic compounds; recent developments from current literature.
- 543 Bioorganic Chemistry 3** Course Prerequisite: CHEM 542. Chemistry of biological systems, medicinal chemistry, protein chemistry, enzyme mechanisms and inhibitors.
- 544 Advanced Topics in Organic Chemistry V** 1-3 May be repeated for credit. Current research in organic chemistry.
- 545 Synthetic Organic Chemistry 3** Course Prerequisite: CHEM 542. Modern synthetic methods and strategies; detailed reaction mechanisms, reaction scope and issues in catalysis will be discussed.
- 546 Spectroscopic Identification of Organic Compounds 3** Structural interpretation of mass spectrometry and IR, UV-VIS and NMR spectrometry of small molecule organic compounds.
- 550 Special Topics in Nuclear Processes and Radioactive Waste Management V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By instructor permission. Fundamental chemistry of the nuclear industry, chemical processing and waste management.
- 555 Teaching Chemistry 1** Teaching chemistry; workshops for new graduate teaching assistants in chemistry focusing on tutorials and labs.
- 564 Molecular Phenomena 3** Phenomena which yield information on structures, energy levels, and interactions of molecules in solid, liquid, and gaseous phases.
- 572 Enzyme Reaction Mechanisms 3** Course Prerequisite: CHEM 542. Methods used to explore enzyme mechanisms; how enzymes catalyze reactions; overview of enzyme co-factors and exploration of differing classes of enzyme catalyzed reactions.
- 581 Environmental Chemistry I 3** Chemistry of natural and pollutant species and their reactions in the atmospheric environment.
- 590 Introduction to Research Topics 1** Presentation and description of research areas and projects of current interest to faculty.
- 592 Seminar in Analytical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in analytical chemistry taken from research in progress or current literature.
- 593 Seminar in Physical Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in physical chemistry taken from research in progress or current literature.
- 594 Seminar in Organic Chemistry 1** May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in organic chemistry taken from research in progress or current literature.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 540 Taxonomy of Immature Insects V** 2-4 Identification of eggs, larvae, nymphs, and pupal stages of insects. Insect collection required.
- 548 Medical and Veterinary Entomology 3** Biology and ecology of parasitic arthropods and their direct impacts on human and animal health; transmission of pathogens. Credit not granted for both ENTOM 448 and ENTOM 548.
- 550 Insect Physiology 3** General principles of insect physiology; the mechanisms of vital processes in insects; organ, cellular, subcellular, chemical and physical levels. Required preparation must include BIOLOGY 332, 352, CHEM 345, ENTOM 340, or 343.
- 555 Agricultural Chemical Technology for Crop Protection & Production 3** Mechanistic examination of agricultural chemical technology; synthetic and biological pesticides and fertilizers; mechanism of biological activity; deployment; management.
- 556 Insecticides: Toxicology and Mode of Action 1** Insecticides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 557 Herbicides: Toxicology and Mode of Action 1** Herbicides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 558 Pesticide Topics 1** Current issues concerning pesticides in terms of toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.

- 590 Special Topics in Entomology V 1-4** May be repeated for credit; cumulative maximum 10 hours. Credit not granted for both ENTOM 490 and ENTOM 590.
- 593 Seminar 1** May be repeated for credit. Reporting and discussing problems and research in entomology.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 552 Pesticides and the Environment 2** Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.
- 501 Cell Biology 3** Cellular structure and function; membrane biochemistry and transport; cell-cell communication; regulation of cell cycle and apoptosis; cell signaling; cancer biology. Credit not granted for both MBIOS 401 and MBIOS 501. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 529 highly recommended.
- 503 Advanced Molecular Biology I 3** DNA replication and recombination in prokaryotes and eukaryotes; recombinant DNA methods and host/vector systems; genome analysis; transgenic organisms. Recommended preparation: Introductory genetics and biochemistry coursework.
- 504 Advanced Molecular Biology II 3** Gene expression and regulation in prokaryotes and eukaryotes, including transcription, RNA processing, and translation; chromatin structure; DNA repair. Recommended preparation: Introductory genetics and biochemistry coursework.
- 505 Cell Biology of Disease 3** Course Prerequisite: MBIOS 301; MBIOS 303. Discussion of human diseases characterized by cell biological defects, using popular press and research articles as a source of information. Credit not granted for both MBIOS 405 and 505.
- 507 Critical Analysis of Scientific Literature 2** Course Prerequisite: MBIOS 503; MBIOS 513 or concurrent enrollment. Dissection and discussion of current molecular bioscience papers to foster development of critical reading of primary literature.
- 508 Quantitative Approaches in Molecular Biosciences 2** Quantitative methods and techniques using examples from the current molecular biosciences primary literature. Recommended preparation: One semester of calculus.
- 513 General Biochemistry 3** Structure and function of proteins, nucleic acids and biological membranes; principles of enzymology; biochemical methodology. Credit not granted for both MBIOS 413 and MBIOS 513. Recommended preparation: Introductory biochemistry coursework.
- 514 General Biochemistry 3** Course Prerequisite: MBIOS 513. Metabolism of carbohydrates, proteins, fats, bioenergetics; photosynthesis; control of metabolic processes. Credit not granted for both MBIOS 414 and MBIOS 514.
- 528 Molecular and Cellular Reproduction 3 (2-2)** State of the art concepts of the molecular, cellular, and physiological aspects of mammalian reproduction. (Cross-listed course offered as MBIOS 528, ANIM SCI 558).
- 529 Selected Topics in Cell Biology 1** Selected topics in cell biology using current literature. Recommended preparation: Concurrent enrollment with MBIOS 501 highly recommended.
- 540 Immunology 3** Principles of basic immunology. Credit not granted for both MBIOS 440 and MBIOS 540. Recommended preparation: Introductory microbiology coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 541 Research Seminar 1** May be repeated for credit; cumulative maximum 2 hours. Literature reviews and research reports.
- 542 General Virology 3** The biology of bacterial, animal, and plant viruses. Credit not granted for both MBIOS 442 and MBIOS 542. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 548 Selected Topics in Immunology & Virology 1** May be repeated for credit. Selected topics in immunology and virology using the current literature. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: Concurrent enrollment with MBIOS 540 or 542.
- 549 Seminar in Immunology 1** May be repeated for credit; cumulative maximum 2 hours. Seminar series on advances in immunology. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: MBIOS 540 or concurrent enrollment.
- 550 Microbial Physiology 3** Basic microbial physiology and its relevance to the processes of applied microbiology. Credit not granted for both MBIOS 450 and MBIOS 550. Recommended preparation: Introductory genetics, biochemistry or microbiology coursework.
- 561 Biochemical Signaling in Plants, Animals and Microorganisms 3** Course Prerequisite: MBIOS 513. New research on intra and extra cellular biochemical signaling, including communication in plants and hormone action in animals. (Cross-listed course offered as MBIOS 561, MPS 561).

- 566 Physical Biochemistry 3** Techniques for the study of biological structure and function; spectroscopy, magnetic resonance, diffusion, sedimentation, electron microscopy, diffraction and scattering. Credit not granted for both MBIOS 466 and MBIOS 566. Recommended preparation: Introductory biophysical or physical chemistry coursework.
- 568 Advanced Topics in Molecular Biosciences V 1-3** May be repeated for credit. Course Prerequisite: MBIOS 513 or concurrent enrollment. Recent research in selected areas of molecular biosciences.
- 574 Protein Biotechnology 3** Biotechnology related to the isolation, modification and large scale commercial production, patenting and marketing of useful recombinant proteins and products. (Cross-listed course offered as MBIOS 574, CHE 574). Recommended preparation: MBIOS 513.
- 578 Bioinformatics 3 (2-3)** Computer analysis of protein and nucleic acid sequences, functional genomics and proteomics data; modeling biological networks and pathways. Credit not granted for both MBIOS 478 and MBIOS 578. Recommended preparation: Introductory genetics or biochemistry coursework.
- 579 Molecular Biosciences Seminar V 1-2** May be repeated for credit; cumulative maximum 10 hours. Required of all graduate students in molecular biosciences.
- 580 Science Information Literacy 2** Efficient methods to locate and effectively use a wide variety of information resources that will be useful in the work world.
- 583 Professional Skills Seminar 1** Covers many aspects of professionalism, including professional behavior, professional dress, and professional sensitivity in social settings.
- 584 Medical Genetics 3** The mechanisms of human heredity and how these mechanisms can influence human health.
- 593 Research Proposal 2** May be repeated for credit; cumulative maximum 4 hours. Written and oral presentation of an area in molecular biosciences. May be repeated for credit; cumulative maximum 4 hours.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Seminar 1** May be repeated for credit. Presentation of research information.
- 502 Advanced Topics in Soils V 1-3** May be repeated for credit; cumulative maximum 6 hours. Interpretation, presentation, and discussion of current research on soils, uses, and management.
- 503 Advanced Soil Analysis V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Soil research techniques; application of modern instrumentation to soil analysis.
- 505 Teaching Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised experience in classroom teaching; classroom preparation for lectures, discussions, laboratories; preparation and grading of exams.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).
- 513 Environmental Soil Physics 3 (2-3)** Physical properties of soils and their relationships to moisture, aeration, and temperature; plant-soil-atmospheric relationships; solute transport and soil salinity. Recommended preparation: SOIL SCI 201 and general physics.
- 514 Environmental Biophysics 2** Physical environment of living organisms (temperature, humidity, radiation, wind); heat and mass exchange and balance in plant and animal systems. Recommended preparation: Introductory biology, physics, and calculus.
- 515 Environmental Biophysics Laboratory 1 (0-3)** Course Prerequisite: Soil Sci 514 or concurrent enrollment. Experimental methods and procedures in environmental measurements; temperature, wind, radiation, and humidity measurements in biological environments.
- 521 Physical Chemistry of Soils 3** Chemical equilibrium and kinetics of soil solution speciation, mineral precipitation and dissolution, adsorption and partitioning reactions, and ion exchange. Soil constituents; soil solutions: mineral equilibria; absorption reactions; acid/base reactions; oxidation-reduction; soil contaminants.
- 531 Soil Microbiology 3 (2-3)** Biology and significance of organisms inhabiting soil and their role in nutrient cycling, ecosystem function, agriculture, and bioremediation.

- 533 Advanced Vadose Processes 2** Methods and models for water, heat, vapor and solute transport in the vadose zone; transfer functions to describe solute transport; non-linear parameter estimation; fate and transport of water, heat, and solutes in the vadose zone; hydrological and geochemical processes in unsaturated subsurface materials. Recommended preparation: upper division or graduate course in soil physics or chemistry.
- 541 Soil-Plant-Microbial Interactions 3** Soil-plant-microbial relationships to plant nutrition, plant health, and environmental cleanup; rhizosphere chemistry and microbial ecology. Required preparation must include two upper-division courses in biology, microbiology or soils.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 547 Soil Fertility Management 3** Philosophy of fertilizer recommendations based on soil and plant tissue testing; principles of fertilizer manufacture, placement and use. Required preparation must include introductory soils and upper-division soil fertility courses.
- 568 ArcGIS and Geospatial Analysis 4 (2-6)** Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 574 Remote Sensing and Geospatial Analysis 3 (1-4)** Digital image processing theory and geographic information systems applied to landscape analysis.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotteling's T2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.

- 536 Statistical Computing 3** (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V** 1-2 May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Entomology

Degree offered: Master of Science in Entomology – Non Thesis

Faculty working with graduate students: 28

Graduate students: 30

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal), IELTS, TOEFL, TOEFLI

Deadline: Fall: March 25

Spring: October 25

Requirements

Collegiate teaching experience is required. This can include the preparation, introductory remarks and conduct of at least three lecture or lab sessions for an entomology course. Master's students are required to participate in two 1-credit seminars. Courses: Students may choose between GEOL 102, Soils 413, Phys 101 or Phys 102 for the Physical Science requirement. Students may choose between ENTOM 340, 361, 545, 546, 548, 572 or IPM 201, 452 or 462 for the Applied Entomology requirement. Students may choose between ENTOM 539 or 540 for the Taxonomy requirement. Students may choose between MBIOS 303 or 514 for the Biochemistry requirement.

Program Description

The Entomology Program at Washington State University provides students the opportunity to work on real world issues that support a safe, sustainable and abundant food supply; address human and animal health issues; and protect many other natural resources. Entomology graduate students are able to tailor their individual research program based on their specific interests. The Entomology Graduate Program encourages the interaction of students with leaders in the field of entomology locally, nationally and world-wide. We have an excellent history of producing graduates who go on to lucrative careers in their area of expertise and to professionally follow their passions.

Degree Description

The Department of Entomology offers graduate programs leading to Doctoral and Master of Science degrees. The curriculum provides the opportunity to study the basic and applied aspects of the science. Facilities and training are available for graduate study in major areas of entomology, including (but not limited to) apiculture; behavior; integrated biological control and sustainable pest management; ecology; forest entomology; insect/plant interactions; medical/veterinary entomology; population genetics; physiology; systematic; biological diversity and environmental toxicology. Departmental faculty, adjunct faculty, and affiliate faculty may all serve as student advisors. Faculty are housed

both on campus and at research stations throughout the state; the ability to significantly interact with both on- and off-campus advisors and mentors offers students opportunities and perspectives not available in most programs. We maintain strong cooperative interactions with the USDA ARS lab in Yakima, Washington. Students whose major advisor resides at a Research & Extension Center (Wenatchee, Prosser, Puyallup, Mt. Vernon or USDA Wapato) typically come to Pullman for at least two semesters then relocate to the center where they will conduct their research and take the remainder of their coursework via AMS/WEEN. Each student's program of study is individualized based on their research interests, prior academic experience, and collaboration with their major advisor.

Training and Professional Development Opportunities

Students have access to excellent labs and greenhouse facilities on the Pullman campus and at Research and Extension centers located throughout Washington State. Students are encouraged to attend Entomological Society of America meetings, as well as other professional meetings, where they present their research, and learn from other scientists in their chosen field.

Post-Graduate Employment Opportunities

New opportunities open every day for entomology graduates that include: federal government agencies (EPA, USDA, APHIS); state departments of agriculture and ecology; state agricultural research stations; university extension service; agrichemical company field representatives in research and sales; agricultural consulting firms; private agribusiness firms; timber and seed production companies; international development agencies; pest control operators; parkland and golf course pest management specialists; mosquito abatement districts; weed control districts; food processing industry; ornamental plant protection; public health service; industrial pest control consultant; the armed forces and homeland security.

Post-Graduate Career Placements

The Entomology Department has excellent record of career placement for its graduates nationally and internationally. Our graduates have found careers in teaching, research and extension at colleges and universities; with federal and state agencies (e.g. USDA, FDA, and Washington State Department of Agriculture); in private industry; entrepreneurial endeavors; pesticide education programs; forensics laboratories.

Faculty

Carol Anelli, Elizabeth Beers, Carol Black, Jay Brunner, Allan Felsot, Stephen Garczynski, Laurel Hansen, Vincent Hebert, David Horton, David James, Andrew Jensen, Vincent Jones, Peter Landolt, Laura Lavine, Bethany Marshall, Joseph Munyaneza, Jeb Owen, Merrill Peterson, Gary Piper, Walter Sheppard, William Snyder, John Stark, Daniel Suomi, Lynell Tanigoshi, Thomas Unruh, Doug Walsh, Terry Whitworth and Richard Zack.

BIOL

- 352 Cell Physiology 3** Course Prerequisite: BIOLOGY 107; CHEM 345. Function and control at the cell-tissue level.
- 372 General Ecology 4 (3-3)** Course Prerequisite: BIOLOGY 106; CHEM 102 or 105. Relationship of organisms with physical and biotic components of their environment at the population, community, and ecosystem level.

CHEM

- 332 Physical Chemistry 3** Course Prerequisite: MATH 273 with a C or better; MATH 220 with a C or better; PHYSICS 202 with a C or better. Elementary quantum theory; molecular structure and spectra; bonding theory; reaction rates; photochemistry and radiation chemistry; energy states and statistical thermodynamics.

ENTOM

- 340 Agricultural Entomology 3 (2-3)** Course Prerequisite: BIOLOGY 106 or 107. Control, identification, and biology of insects and related arthropods. Course equivalent to OSU's Ent 311 and UI's Ent 322.
- 343 General Entomology 3** Biology, natural history, and importance of insects and related arthropods.
- 361 Honey Bee Biology 3** Biology of the honey bee, including behavior, genetics, evolution, pollination, sociality, and beekeeping practices.

Integrated Pest Management

IPM

- 452 Pesticides and the Environment 2** Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.
- 462 Systems of Integrated Pest Management 3 (2-3)** Utilization of the systems approach in agricultural pest management; design, implementation, and analysis of IPM programs for selected crops.

Integrated Pest Management

MBIOS

- 301 General Genetics 4** Course Prerequisite: BIOLOGY 106 or 120; BIOLOGY 107; CHEM 101 or 105; CHEM 102 or 106. Principles of modern and classical genetics. (Cross-listed course offered as MBIOS 301, BIOLOGY 301).

303 Introductory Biochemistry 4 Course Prerequisite: CHEM 102 or 345. Modern biochemistry for undergraduates in the biological sciences.

Integrated Pest Management

SOILS

413 Soil Physics 3 (2-3) Characterization of soil properties including water content and potential and hydraulic conductivity; modeling water, solute transport, erosion and contamination of groundwater.

500 Seminar 1 May be repeated for credit.

501 Proposal Defense Seminar 2 Research proposal defense as part of the preliminary examination for candidacy in the Ph.D. program.

504 Experimental Methods in Plant Physiology 3 (2-3) Advanced techniques and instrumental methods applicable to research in plant physiology.

509 Plant Anatomy 4 (2-6) Developmental anatomy and morphology of vascular plants; economic forms. Credit not granted for both BIOLOGY 409 and BIOLOGY 509.

512 Molecular Mechanisms of Plant Development 3 Physiology of growth; metabolism during development and reproduction.

513 Plant Metabolism 3 Metabolic processes unique to plants, including the primary incorporation of nitrogen, sulfur, carbon dioxide and phosphate into bio-molecules.

514 Fish Genetics 2 Chromosomal, biochemical, quantitative, and ecological aspects of fish genetics with emphasis on applications to aquaculture and fish management.

517 Stress Physiology of Plants 3 Temperature, light, salinity, water effects on physiological processes; mechanistic understanding of stress.

519 Introduction to Population Genetics 3 Survey of basic population and quantitative genetics.

520 Conservation Genetics 2 Genetic studies and approaches relevant to efforts to conserve threatened and endangered populations of organisms.

521 Quantitative Genetics 3 Course Prerequisite: BIOLOGY 519. Fundamentals of quantitative genetics; evolutionary quantitative genetics.

531 Principles of Systematic Biology 3 Systematic theory; history and current views; approaches to phylogenetic analysis and classification.

533 Modern Methods in Phylogenetics 4 (2-6) Selecting, gathering, and analyzing morphological, cytological, molecular data for phylogenetic and evolutionary studies.

537 Plant Cell Biology 3 Structure and function of plant cells including membrane biology, protein targeting and molecular signaling with emphasis on current research.

540 Stable Isotope Theory and Methods 3 (2-3) Theory and practice of measuring stable isotope ratios of biologically important elements; training in the use of isotope mass spectrometers.

544 Nitrogen Cycling in the Earth's Systems 3 Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).

548 Evolutionary Ecology of Populations 3 Evolutionary dynamics of natural populations and the co-evolution of species.

556 Biochemical Adaptation 3 Relationships between enzyme/macromolecule adaptation and animal performance.

559 Hormones, Brain and Behavior 3 Classical behavioral endocrinology from molecular to whole organisms, integrating evolutionary ecology, neuroethology and behavioral neuroendocrinology.

560 Plant Ecophysiology 3 Relationships of biotic and abiotic environment to plant distribution and evolution through study of physiological processes.

561 Environmental Physiology 3 Individual and evolutionary adaptations to changing environments with emphasis on recent literature.

562 Community Ecology 3 Assembly, essential properties, levels of interactions, succession, and stability of natural communities; emphasizes an experimental approach to community investigation. Credit not granted for both BIOLOGY 462 and BIOLOGY 562. Recommended preparation: BIOLOGY 372.

563 Field Ecology 2 (0-6) Field implementation of descriptive and experimental techniques to quantify the structure, composition, and interactions within natural communities. Field trips required.

564 Molecular Ecology and Phylogeography 3 Use of genetic markers for the study of ecological phenomena, including kinship, population structure, and phylogeography.

565 Ecology and Evolution of Disease 3 Disease ecology and evolution with a focus on current literature. Recommended preparation: BIOLOGY 372; BIOLOGY 405.

566 Mathematical Genetics 3 Mathematical approaches to population genetics and genome analysis; theories and statistical analyses of genetic parameters. (Cross-listed course offered as MATH 563, BIOLOGY 566). Required preparation must include multivariate calculus, genetics, and statistics.

567 Ecological Restoration 3 Introduction to major issues in restoration ecology; major ecological dimensions of restoration.

568 Conservation Ecology 3 Prereq Graduate standing. Diagnosis of endangered species, population viability analysis, invasive species ecology, landscape ecology and ecosystem management.

569 Ecosystem Ecology and Global Change 3 Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.

- 570 Diversity of Plants 3** Morphological, life history, and ecological diversity of major plant clades; emphasis on principles of homology, character transformation, and macroevolution.
- 572 Quantitative Methods and Statistics in Ecology 4 (3-3)**
Course Prerequisite: By permission only. Philosophy and methods of formulating hypotheses as mathematical models and confronting them with data.
- 573 Ancient DNA 3** The prospects and problems associated with the study of ancient DNA are explored through reading and discussing primary literature.
- 575 Systems Biology of Reproduction 3** Current literature based course on systems biology with a molecular/epigenetic to physiological level understanding of cell, development, disease, and evolutionary biology. Credit not granted for both BIOLOGY 475 and 575.
- 576 Epigenetics and Systems Biology 3** Current literature based course on epigenetics and systems biology with topics in environmental epigenetics, disease etiology, and role epigenetics in evolutionary biology. Credit not granted for both BIOLOGY 476 and 576.
- 579 Mathematical Modeling in the Biological and Health Sciences 3** Techniques, theory, and current literature in mathematical modeling in the biological and health sciences, including computational simulation. (Course offered as BIOLOGY 579, MATH 579).
- 581 Comparative Biology of Social Traditions 3** Phylogenetic and modeling perspectives used to examine the evolution of social learning and cultural transmission in humans and other animals. (Cross-listed course offered as ANTH 581, BIOLOGY 581).
- 582 Professional Communication in Biology - Grant Writing 2** Mechanics and style of publishing biological research and findings; adaptation of writing to various venues and audiences with emphasis on grant writing.
- 585 Professional Development and Training for College and University Teaching 2** Preparation for roles as teaching assistants and as instructors of undergraduate classroom education.
- 589 Advanced Topics in Biology V 1-3** May be repeated for credit; cumulative maximum 6 hours. Recent advances in biology.
- 591 Seminar in Molecular Plant Sciences 1** May be repeated for credit; cumulative maximum 4 hours. A cross-discipline seminar, including botany, crop and soils sciences, horticulture, plant pathology, and molecular plant sciences.
- 593 Seminar I 1** May be repeated for credit. Literature and problems.
- 597 Teaching Practicum V 1-4** May be repeated for credit; cumulative maximum 4 hours. Zoology laboratory teaching internship.
- 598 IPEM Seminar 1** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Symposia and project work sessions for the WSU/UW IGERT: Program in Evolutionary Modeling. (Cross-listed course offered as ANTH 596, BIOLOGY 598).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Advanced Inorganic Chemistry I 3** Periodic table survey, typical compounds and their reactivity; models and reactivity, acid-base, oxidation-reduction, and electronic structure contributions.
- 503 Advanced Topics in Inorganic Chemistry V 1-3** May be repeated for credit. Recent significant developments.
- 509 Chemical Group Theory 3** Mathematical definitions of groups and representations, applications to chemical structure and spectra, ligand field theory, chemical reactions and selection rules.
- 510 Introduction to Proteomics 2** Techniques and applications for the analysis of the proteome. Recommended preparation: MBIOS 303 or equivalent.
- 512 Bioanalysis 2** Methods for the measurement of biological compounds.
- 514 Mass Spectrometry 2** Current methods, techniques and interpretation of mass spectrometric analysis. Recommended preparation: CHEM 425 or equivalent.
- 517 Chromatography 2** Recommended preparation: CHEM 425 or equivalent.
- 518 Electrochemistry 2** Recommended preparation: CHEM 425 or equivalent.
- 520 Advanced Analytical Chemistry 3** Statistics in chemical analysis; sampling; control of contamination and losses in analysis; electrochemical methods; separation in analysis; spectroscopic techniques. Recommended preparation: CHEM 425 or equivalent.
- 521 Radiochemistry and Radiotracers 2** Graduate-level counterpart of CHEM 421; additional requirements. Recommended preparation: CHEM 425 or equivalent.

- 522 Radiochemistry Laboratory 1** (0-3) Graduate-level counterpart of CHEM 422; additional requirements. Required preparation must include CHEM 222, CHEM 331, and PHYSICS 202 or equivalent.
- 527 Environmental Chemistry 2** Natural water chemistry, AGRI processes, kinetics, thermodynamics, modeling in lake, river, and sea water.
- 529 Selected Topics in Analytical Chemistry V** 1-3 May be repeated for credit. Selected current developments.
- 531 Advanced Physical Chemistry I** 3 Classical physical chemistry including basic thermodynamics and kinetics; an introductory discussion of surface chemistry and electrochemistry. Recommended preparation: CHEM 331 or equivalent.
- 532 Advanced Physical Chemistry II** 3 Introduction to quantum mechanics; postulates of quantum mechanics; exact solutions and approximation methods. Recommended preparation: CHEM 332 or equivalent.
- 534 Chemical Statistical Mechanics** 3 Statistical theory of thermodynamic variables and chemical equilibrium; calculation of equilibrium properties from spectral data; fluctuations about equilibrium; quantum statistics.
- 536 Quantum Chemistry** 3 Course Prerequisite: CHEM 532. Quantum mechanics applied to chemical problems: states of atoms and molecules, transitions and spectra, ladder operators and many electron methods.
- 537 Advanced Topics in Physical Chemistry V** 1-3 May be repeated for credit. Selected subjects; irreversible thermodynamics; chemical bonding; NMR; ligand field theory; x-ray diffraction; neutron diffraction.
- 540 Physical Organic Chemistry** 3 Course Prerequisite: CHEM 542. The major classes of organic reaction mechanisms and their significance; kinetics and introductory theory.
- 542 Advanced Organic Chemistry** 3 Synthesis of organic compounds; recent developments from current literature.
- 543 Bioorganic Chemistry** 3 Course Prerequisite: CHEM 542. Chemistry of biological systems, medicinal chemistry, protein chemistry, enzyme mechanisms and inhibitors.
- 544 Advanced Topics in Organic Chemistry V** 1-3 May be repeated for credit. Current research in organic chemistry.
- 545 Synthetic Organic Chemistry** 3 Course Prerequisite: CHEM 542. Modern synthetic methods and strategies; detailed reaction mechanisms, reaction scope and issues in catalysis will be discussed.
- 546 Spectroscopic Identification of Organic Compounds** 3 Structural interpretation of mass spectrometry and IR, UV-VIS and NMR spectrometry of small molecule organic compounds.
- 550 Special Topics in Nuclear Processes and Radioactive Waste Management V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By instructor permission. Fundamental chemistry of the nuclear industry, chemical processing and waste management.
- 555 Teaching Chemistry** 1 Teaching chemistry; workshops for new graduate teaching assistants in chemistry focusing on tutorials and labs.
- 564 Molecular Phenomena** 3 Phenomena which yield information on structures, energy levels, and interactions of molecules in solid, liquid, and gaseous phases.
- 572 Enzyme Reaction Mechanisms** 3 Course Prerequisite: CHEM 542. Methods used to explore enzyme mechanisms; how enzymes catalyze reactions; overview of enzyme co-factors and exploration of differing classes of enzyme catalyzed reactions.
- 581 Environmental Chemistry I** 3 Chemistry of natural and pollutant species and their reactions in the atmospheric environment.
- 590 Introduction to Research Topics** 1 Presentation and description of research areas and projects of current interest to faculty.
- 592 Seminar in Analytical Chemistry** 1 May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in analytical chemistry taken from research in progress or current literature.
- 593 Seminar in Physical Chemistry** 1 May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in physical chemistry taken from research in progress or current literature.
- 594 Seminar in Organic Chemistry** 1 May be repeated for credit; cumulative maximum 6 hours. Presentation and discussion of topics in organic chemistry taken from research in progress or current literature.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 540 Taxonomy of Immature Insects V** 2-4 Identification of eggs, larvae, nymphs, and pupal stages of insects. Insect collection required.

- 548 Medical and Veterinary Entomology 3** Biology and ecology of parasitic arthropods and their direct impacts on human and animal health; transmission of pathogens. Credit not granted for both ENTOM 448 and ENTOM 548.
- 550 Insect Physiology 3** General principles of insect physiology; the mechanisms of vital processes in insects; organ, cellular, subcellular, chemical and physical levels. Required preparation must include BIOLOGY 332, 352, CHEM 345, ENTOM 340, or 343.
- 555 Agricultural Chemical Technology for Crop Protection & Production 3** Mechanistic examination of agricultural chemical technology; synthetic and biological pesticides and fertilizers; mechanism of biological activity; deployment; management.
- 556 Insecticides: Toxicology and Mode of Action 1** Insecticides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 557 Herbicides: Toxicology and Mode of Action 1** Herbicides in terms of historical perspective, classification, synthesis, toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 558 Pesticide Topics 1** Current issues concerning pesticides in terms of toxicity, mode of action, and metabolism. Required preparation must include MBIOS 303; CHEM 345; BIOLOGY 352, 420, or 350.
- 590 Special Topics in Entomology V 1-4** May be repeated for credit; cumulative maximum 10 hours. Credit not granted for both ENTOM 490 and ENTOM 590.
- 593 Seminar 1** May be repeated for credit. Reporting and discussing problems and research in entomology.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 552 Pesticides and the Environment 2** Immediate and prolonged effects of pesticides on human and other animals; legal and moral repercussions of pesticide use. Recommended for graduate-level course: 12 credit hours of biology or ecology courses.
- 501 Cell Biology 3** Cellular structure and function; membrane biochemistry and transport; cell-cell communication; regulation of cell cycle and apoptosis; cell signaling; cancer biology. Credit not granted for both MBIOS 401 and MBIOS 501. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 529 highly recommended.
- 503 Advanced Molecular Biology I 3** DNA replication and recombination in prokaryotes and eukaryotes; recombinant DNA methods and host/vector systems; genome analysis; transgenic organisms. Recommended preparation: Introductory genetics and biochemistry coursework.
- 504 Advanced Molecular Biology II 3** Gene expression and regulation in prokaryotes and eukaryotes, including transcription, RNA processing, and translation; chromatin structure; DNA repair. Recommended preparation: Introductory genetics and biochemistry coursework.
- 505 Cell Biology of Disease 3** Course Prerequisite: MBIOS 301; MBIOS 303. Discussion of human diseases characterized by cell biological defects, using popular press and research articles as a source of information. Credit not granted for both MBIOS 405 and 505.
- 507 Critical Analysis of Scientific Literature 2** Course Prerequisite: MBIOS 503; MBIOS 513 or concurrent enrollment. Dissection and discussion of current molecular bioscience papers to foster development of critical reading of primary literature.
- 508 Quantitative Approaches in Molecular Biosciences 2** Quantitative methods and techniques using examples from the current molecular biosciences primary literature. Recommended preparation: One semester of calculus.
- 513 General Biochemistry 3** Structure and function of proteins, nucleic acids and biological membranes; principles of enzymology; biochemical methodology. Credit not granted for both MBIOS 413 and MBIOS 513. Recommended preparation: Introductory biochemistry coursework.
- 514 General Biochemistry 3** Course Prerequisite: MBIOS 513. Metabolism of carbohydrates, proteins, fats, bioenergetics; photosynthesis; control of metabolic processes. Credit not granted for both MBIOS 414 and MBIOS 514.
- 528 Molecular and Cellular Reproduction 3 (2-2)** State of the art concepts of the molecular, cellular, and physiological aspects of mammalian reproduction. (Cross-listed course offered as MBIOS 528, ANIM SCI 558).
- 529 Selected Topics in Cell Biology 1** Selected topics in cell biology using current literature. Recommended preparation: Concurrent enrollment with MBIOS 501 highly recommended.
- 540 Immunology 3** Principles of basic immunology. Credit not granted for both MBIOS 440 and MBIOS 540. Recommended preparation: Introductory microbiology coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 541 Research Seminar 1** May be repeated for credit; cumulative maximum 2 hours. Literature reviews and research reports.

- 542 General Virology 3** The biology of bacterial, animal, and plant viruses. Credit not granted for both MBIOS 442 and MBIOS 542. Recommended preparation: Introductory genetics and biochemistry coursework; concurrent enrollment with MBIOS 548 highly recommended.
- 548 Selected Topics in Immunology & Virology 1** May be repeated for credit. Selected topics in immunology and virology using the current literature. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: Concurrent enrollment with MBIOS 540 or 542.
- 549 Seminar in Immunology 1** May be repeated for credit; cumulative maximum 2 hours. Seminar series on advances in immunology. May be repeated for credit; cumulative maximum 2 hours. Recommended preparation: MBIOS 540 or concurrent enrollment.
- 550 Microbial Physiology 3** Basic microbial physiology and its relevance to the processes of applied microbiology. Credit not granted for both MBIOS 450 and MBIOS 550. Recommended preparation: Introductory genetics, biochemistry or microbiology coursework.
- 561 Biochemical Signaling in Plants, Animals and Microorganisms 3** Course Prerequisite: MBIOS 513. New research on intra and extra cellular biochemical signaling, including communication in plants and hormone action in animals. (Cross-listed course offered as MBIOS 561, MPS 561).
- 566 Physical Biochemistry 3** Techniques for the study of biological structure and function; spectroscopy, magnetic resonance, diffusion, sedimentation, electron microscopy, diffraction and scattering. Credit not granted for both MBIOS 466 and MBIOS 566. Recommended preparation: Introductory biophysical or physical chemistry coursework.
- 568 Advanced Topics in Molecular Biosciences V 1-3** May be repeated for credit. Course Prerequisite: MBIOS 513 or concurrent enrollment. Recent research in selected areas of molecular biosciences.
- 574 Protein Biotechnology 3** Biotechnology related to the isolation, modification and large scale commercial production, patenting and marketing of useful recombinant proteins and products. (Cross-listed course offered as MBIOS 574, CHE 574). Recommended preparation: MBIOS 513.
- 578 Bioinformatics 3 (2-3)** Computer analysis of protein and nucleic acid sequences, functional genomics and proteomics data; modeling biological networks and pathways. Credit not granted for both MBIOS 478 and MBIOS 578. Recommended preparation: Introductory genetics or biochemistry coursework.
- 579 Molecular Biosciences Seminar V 1-2** May be repeated for credit; cumulative maximum 10 hours. Required of all graduate students in molecular biosciences.
- 580 Science Information Literacy 2** Efficient methods to locate and effectively use a wide variety of information resources that will be useful in the work world.
- 583 Professional Skills Seminar 1** Covers many aspects of professionalism, including professional behavior, professional dress, and professional sensitivity in social settings.
- 584 Medical Genetics 3** The mechanisms of human heredity and how these mechanisms can influence human health.
- 593 Research Proposal 2** May be repeated for credit; cumulative maximum 4 hours. Written and oral presentation of an area in molecular biosciences. May be repeated for credit; cumulative maximum 4 hours.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 Seminar 1** May be repeated for credit. Presentation of research information.
- 502 Advanced Topics in Soils V 1-3** May be repeated for credit; cumulative maximum 6 hours. Interpretation, presentation, and discussion of current research on soils, uses, and management.
- 503 Advanced Soil Analysis V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: By permission only. Soil research techniques; application of modern instrumentation to soil analysis.
- 505 Teaching Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised experience in classroom teaching; classroom preparation for lectures, discussions, laboratories; preparation and grading of exams.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 511 Research Proposal and Development 2** Develop research proposal and give oral presentation to demonstrate ability to employ strategy and procedures to address objectives. (Cross-listed course offered as CROP SCI 511, SOIL SCI 511).

- 513 Environmental Soil Physics 3** (2-3) Physical properties of soils and their relationships to moisture, aeration, and temperature; plant-soil-atmospheric relationships; solute transport and soil salinity. Recommended preparation: SOIL SCI 201 and general physics.
- 514 Environmental Biophysics 2** Physical environment of living organisms (temperature, humidity, radiation, wind); heat and mass exchange and balance in plant and animal systems. Recommended preparation: Introductory biology, physics, and calculus.
- 515 Environmental Biophysics Laboratory 1** (0-3) Course Prerequisite: Soil Sci 514 or concurrent enrollment. Experimental methods and procedures in environmental measurements; temperature, wind, radiation, and humidity measurements in biological environments.
- 521 Physical Chemistry of Soils 3** Chemical equilibrium and kinetics of soil solution speciation, mineral precipitation and dissolution, adsorption and partitioning reactions, and ion exchange. Soil constituents; soil solutions: mineral equilibria; absorption reactions; acid/base reactions; oxidation-reduction; soil contaminants.
- 531 Soil Microbiology 3** (2-3) Biology and significance of organisms inhabiting soil and their role in nutrient cycling, ecosystem function, agriculture, and bioremediation.
- 533 Advanced Vadose Processes 2** Methods and models for water, heat, vapor and solute transport in the vadose zone; transfer functions to describe solute transport; non-linear parameter estimation; fate and transport of water, heat, and solutes in the vadose zone; hydrological and geochemical processes in unsaturated subsurface materials. Recommended preparation: upper division or graduate course in soil physics or chemistry.
- 541 Soil-Plant-Microbial Interactions 3** Soil-plant-microbial relationships to plant nutrition, plant health, and environmental cleanup; rhizosphere chemistry and microbial ecology. Required preparation must include two upper-division courses in biology, microbiology or soils.
- 544 Nitrogen Cycling in the Earth's Systems 3** Nitrogen dynamics in terrestrial, aquatic, and atmospheric systems; nitrogen transformations in natural and managed systems and responses to human activities. (Cross-listed course offered as BIOLOGY 544, SOIL SCI 544).
- 547 Soil Fertility Management 3** Philosophy of fertilizer recommendations based on soil and plant tissue testing; principles of fertilizer manufacture, placement and use. Required preparation must include introductory soils and upper-division soil fertility courses.
- 568 ArcGIS and Geospatial Analysis 4** (2-6) Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 574 Remote Sensing and Geospatial Analysis 3** (1-4) Digital image processing theory and geographic information systems applied to landscape analysis.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3** (2-2) Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.

- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Environmental and Natural Resource Sciences

Degree offered: Doctor of Philosophy (Environmental and Natural Resource Sciences)

Faculty working with graduate students: 10

Graduate students: 19

Graduate students receiving assistantships or scholarships: 100%

Program offered: Pullman, Tri-Cities, Vancouver

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 15

Spring: October 15

Requirements

As described in the Graduate School rules: 15 semester hours of graded coursework at the 500 level beyond the Bachelor's degree. No more than 9 credits of non-graduate credit course work may be used for the total credits for the Program of Study. Only those master's degree and transfer courses at a level equivalent to 500 level courses and which are applicable to the doctoral program can be used. Minimum GPA is 3.0. Any course with a grade of C- must be repeated.

Program Description

The School of Earth & Environmental Sciences (SEES) is a new unit established August, 2006 comprised of the former Program in Environmental Science & Regional Planning and Department of Geology. The School offers a: * Master of Science in Envi-

ronmental Science, * Master of Science in Geology, * Doctor of Philosophy in Environmental and Natural Resource Sciences) and * Doctor of Philosophy in Geology. The Master's degree in Environmental Science is offered at WSU Tri-Cities and WSU Vancouver, as well as at WSU-Pullman

Allyson Beall, Michael Berger, Stephen Bollens, M Chappell, Frederick Ford, John Harrison, Stephen Henderson, Cailin Orr, Gretchen Rollwagen-Bollens and Brian Tissot.

Environmental Engineering

Degree offered: Master of Science in Environmental Engineering

Faculty working with graduate students: 32

Program offered: Pullman, Tri-Cities, Vancouver

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 10
Spring: July 1

Program Description

The graduate programs in Environmental Engineering are offered leading to the Master of Science in Environmental Engineering degree. The department also participates in university programs leading to the M.S. in Environmental Science and the Ph.D. in Engineering Science. At the Master's level, specific programs are available within each area.

Degree Description

Students may be accepted into the graduate program with undergraduate degrees in other than Civil or environmental Engineering (e.g., related areas such as mechanical engineering, materials science, environmental science, etc.). These students, however, may need to complete additional courses to cover deficiencies. Courses taken to satisfy deficiencies cannot be included in the program of study. Each student, in consultation with his/her graduate committee, will develop a plan of study. This plan outlines what courses will be required for completion of the degree. To develop a plan of study, students may choose from a variety of graduate and selected undergraduate courses offered in the area of emphasis. In addition, courses may be selected from a number of related courses in other programs in the Department of Civil and Environmental Engineering, as well as in other departments of the University.

Program Description

The School of Earth & Environmental Sciences (SEES) is a new unit established August, 2006 comprised of the former Program in Environmental Science & Regional Planning and Department of Geology. The School offers a: * Master of Science in Environmental Science, * Master of Science in Geology, *

Doctor of Philosophy in Environmental and Natural Resource Sciences) and * Doctor of Philosophy in Geology. The Master's degree in Environmental Science is offered at WSU Tri-Cities and WSU Vancouver, as well as at WSU-Pullman.

Degree Description

The MS degree is an interdisciplinary program with the flexibility for elective classes in the student's own area of specialization. In consultation with their advisor, students may select classes from a wide variety of areas (i.e., ecosystem science and management, ecological planning, land and water conservation, air quality management, water quality management, energy and carbon policy, etc.). Most students conclude their MS studies with a thesis, where the goal is a publishable contribution. The requirements are given below and are subject to completion after entering the Master's program.

Environmental Science & Regional Planning

ES/RP

- 501 Graduate Skills Seminar 1** Seminar designed to introduce first year graduate students to the science graduate program; roles and responsibilities of graduate students, teaching assistants and researchers.
- 504 Ecosystem Management 3** Analysis of ecosystem processes; dual emphasis on ecological principles and development of methods and concepts to evaluate policies for management.
- 531 Fundamentals of Environmental Toxicology 3** Fundamentals of toxicology; environmental fate and biological deposition and effects of natural products, drugs, food chemicals, and pollutants.
- 532 Applied Environmental Toxicology 3** Course Prerequisite: ENVR SCI 531 or PHARMSCI 505. Overview of the field of environmental toxicology; interactions of xenobiotics with natural systems.
- 540 Agroecology 3** Social and ecological aspects of agriculture and human food systems.
- 544 Environmental Assessment 4** Environmental impact statements and their national and state policy frameworks, methods of assessment, and team preparation of an impact statement. Credit not granted for both ENVR SCI 444 and ENVR SCI 544.
- 545 Hazardous Waste Management 3** Environmental, technical, and political aspects of hazardous waste management; evaluative methods, risk assessment, and current management requirements. Credit not granted for both ENVR SCI 445 and ENVR SCI 545.
- 550 System Dynamics Models of Environmental Systems 3** Analysis of environmental system dynamics; development and uses of simulation models using the Stella software on Macintosh.
- 569 Ecosystem Ecology and Global Change 3** Historic and current factors controlling the function of ecosystems and their responses to natural and human caused global change. (Cross-listed course offered as BIOLOGY 469, ENVR SCI 469, BIOLOGY 569, ENVR SCI 569). Credit not granted for both BIOLOGY 469 and 569, or ENVR SCI 469 and 569.

- 585 Aquatic System Restoration 3** Study of natural, damaged and constructed ecosystems with emphasis on water quality protection and restoration of lakes, rivers, streams and wetlands. (Cross-listed course offered as CE 585, BSYSE 554, ENVR SCI 585). Required preparation must include CHEM 345; MBIOS 101. Required preparation must include CHEM 345; MBIOS 101.
- 586 ArcGIS and Geospatial Analysis 4 (2-6)** Geographic information systems applied to analysis of landscape data; maps, geographic coordinate systems and projections, geodatabases. (Cross-listed course offered as SOIL SCI 468, ENVR SCI 486, ENVR SCI 586).
- 590 Special Topics 2** May be repeated for credit; cumulative maximum 6 hours.
- 592 Special Topics V 1-4** May be repeated for credit; cumulative maximum 4 hours.
- 593 Seminar in Environmental Science and Regional Planning 1** May be repeated for credit; cumulative maximum 8 hours. May be repeated for credit, cumulative maximum 8 hours.
- 594 Environmental and Natural Resources Issues and Ethics 3** Ethical systems applied to natural resources; issues of professionalism and ethics in natural resource management. (Cross-listed course offered as NATRS 594, ENVR SCI 594).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Environmental Science

Degree offered: Master of Science in Environmental Science - Non Thesis

Faculty working with graduate students: 11

Graduate students: 7

Program offered: Pullman, Tri-Cities, Vancouver

Tests required: TOEFL, TOEFLI

Deadline: Fall: January 15

Spring: October 15

Program Description

The School of Earth & Environmental Sciences (SEES) is a new unit established August, 2006 comprised of the former Program in Environmental Science & Regional Planning and Department of Geology. The School offers a: * Master of Science in Environmental Science, * Master of Science in Geology, *

Doctor of Philosophy in Environmental and Natural Resource Sciences) and * Doctor of Philosophy in Geology. The Master's degree in Environmental Science is offered at WSU Tri-Cities and WSU Vancouver, as well as at WSU-Pullman.

Degree Description

After consultation with their advisor, some students may decide to produce a project rather than a thesis. This option may be preferable for students who wish to take additional course work and want a more flexible format for the project report. This option requires a final oral exam to test the candidate's knowledge of Environmental Science with emphasis on the work presented in the project report. The project requires 4 credits of ESRP 702 (rather than 6 credits of ESRP 700) and 2 additional hours of course work. The requirements are given below and are subject to completion after entering the Master's program.

Exercise Science – Certificate in Exercise Science

Degree offered: Graduate Certificate in Exercise Science

Program offered: Spokane

Tests required: GRE (Combined), TOEFL

Deadline: Fall: February 1

Program Description

WSU Spokane offers the only research-based Exercise Science graduate program in Washington State that focuses on clinical and experimental exercise physiology with an emphasis on cellular and molecular mechanisms. The core curriculum provides a foundation in the study of the cellular mechanisms that regulate physiological responses to exercise and the molecular mechanisms that govern these cellular responses. Research methods and statistics courses provide preparatory study in research design and analysis for future project/thesis work.

Degree Description

The Master of Science Coordinated Program in Dietetics Nutrition and Exercise Physiology is designed for those individuals whose career goal is to become eligible to take the registration examination for dietitians through the American Dietetic Association. Graduates of the program are expected to function effectively as entry-level dietetics practitioners in a clinical, administrative, or community setting. The supervised practice experience requirement is currently 1200 hours. The 1200 hours of supervised practice consists of 160 hours in a food man-

agement rotation, 440 hours in a clinical rotation, 200 hours in a community rotation, and 400 hours in an exercise physiology internship

Training and Professional Development Opportunities

Most registered dietitians work at hospitals and medical centers, private practice or other health-care facilities. Many work in community and public health settings, academia and research. Others work in food and nutrition industry and business, journalism, sports nutrition, corporate wellness programs and in other nontraditional settings. RDs work in: Hospitals, HMOs or other health care facilities, educating patients about nutrition and administering medical nutrition therapy as part of the health care team. They may also manage the foodservice operations in these settings, as well as in schools, day-care centers, and correctional facilities, overseeing everything from food purchasing and preparation to managing staff. Sports nutrition and corporate wellness programs, educating clients about the connection between food and fitness, health, and exercise performance. Food and nutrition-related businesses and industries, working in communications, consumer affairs, public relations, marketing, or product development. Private practice, working under contract with health care or food companies, or in their own business. RDs may provide services to foodservice or restaurant managers, food vendors and distributors, athletes, nursing home residents, or company employees. Community and public health settings teaching monitoring, and advising the public, and helping to improve their quality of life through healthy eating habits. Universities and medical centers, teaching physicians, nurses, dietetics students and others the sophisticated science of foods and nutrition. Research areas, in food and pharmaceutical companies, universities, and hospitals, directing or conducting experiments to answer critical nutrition questions and find alternative foods or nutrition recommendations for the public.

Nutrition and Exercise Physiology

NEP

- 300 Professional Preparation 2** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Standards of practice in dietetics and exercise physiology; healthcare ethics; social and cultural issues; professional writing; career development.
- 320 Strength Training and Conditioning; Theory and Application 3** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Application of scientific principles of strength and conditioning as they relate to exercise training.

- 340 Foods with Application to Physical Activity 3 (2-3)** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Experimental approach to physical, chemical and sensory properties of foods; overview of culinary techniques, technology and application to physical activity.
- 362 Biomechanical Analysis 3** Applied sport, clinical and occupational biomechanics.
- 400 Macronutrient Metabolism 3** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Digestion, absorption, and metabolism of carbohydrates, protein and fats, and their utilization for energy.
- 401 Community Supervised Practice 9** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Advanced principles of community dietetic nutrition education along with hands-on community supervised practice experience.
- 402 Vitamin and Mineral Metabolism 3** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Absorption and metabolism of vitamins and minerals and their role in macronutrient metabolism and nutritional requirements for maintenance of health.
- 427 Nutritional Assessment and Lifestyle Counseling 3 (2-3)** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Basic skills and concepts of nutrition assessment and lifestyle counseling of ambulatory adults using dietary intakes, menu planning and communication skills.
- 435 Exercise, Diet and Disease 4** Course Prerequisite: NEP 400; NEP 402 or concurrent enrollment; NEP 463. Pathophysiology of disease and implications for dietary and exercise interventions.
- 437 Diet Therapy 4** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Theoretical and practical base for diet modification and nutritional therapy in health and a variety of disease states.
- 440 Clinical Supervised Practice 11** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Professional supervised experience offsite in clinical dietetics. Meets American Dietetic Association requirements for registration eligibility.
- 450 Management and Facilities 3** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Essential skills and guidelines for those in the health facility industry in establishing and maintaining a safe and proper facility.

- 451 Management Practices in Food Science 5** (1-12) Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Advanced principles of food systems; institutional food service management along with offsite, hands-on food service supervised practice experience.
- 458 Nutrition and Exercise Throughout the Life Cycle 3** Physical activity relating to nutritional needs and dietary patterns from infancy through old age and including maternal nutrition.
- 463 Advanced Exercise Physiology 4** (3-3) Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Advanced undergraduate exercise physiology with emphasis on mechanisms regulating physiological responses to exercise across the life span.
- 465 Nutrition and Exercise Assessment 3** (2-3) Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Field and laboratory techniques and tools required to properly assess nutritional and physiological parameters.
- 470 Sports Nutrition 3** Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Identification of energy, macro/micronutrients and fluid requirements during exercise; evaluation of dietary practices and ergogenic aids for pre- and post-competition, weight maintenance.
- 473 Nutrition in the Community 2** Public health nutrition including assessment of communities, problem list development, program planning and an overview of existing programs and services.
- 476 Exercise Testing and Prescription 3** (2-3) Course Prerequisite: Certified major in nutrition and exercise physiology, or admitted to the Master of Science in Coordinated Program in Dietetics, Nutrition, and Exercise Physiology. Principles of exercise testing and prescription based on current practices in physical education, physiology, and rehabilitation.
- 478 Electrocardiography, Medications and Procedures 3** (2-3) Development of ECG interpretation skills, including 12-leads, with emphasis on procedures and impact of medication in resting and exercising persons.
- 479 Nutrition and Exercise Practicum 3** (1-6) May be repeated for credit; cumulative maximum 6 hours. Supervised experience in applying exercise and nutrition assessment techniques and developing exercise and nutrition prescription for normal and diseased subjects.
- 480 Cardiopulmonary Rehabilitation 4** (3-3) Course Prerequisite: Certified major in Nutrition and Exercise Physiology. Principles and applications of exercise assessment/prescription and nutrition recommendations and program management to cardiopulmonary and rehabilitation situations and populations.
- 490 Exercise and Nutrition Internship V 10** (0-30) to 15 (0-45) Supervised offsite exercise field experience to assess normal and diseased populations and develop/apply exercise prescriptions and nutrition recommendations.
- 501 Community Supervised Practice 5** (1-12) Review of literature in dietetic education and health promotion including supervised practice in community facilities.
- 505 Graduate Seminar V 2-3** May be repeated for credit; cumulative maximum 6 hours. Current issues and evaluation of literature related to nutrition, dietetics, exercise physiology practice and research.
- 510 Foundations of Cellular Regulation 3** Fundamentals of pharmacology and toxicology; signal transduction; cellular effects of diet and exercise; action and regulation of dietary supplements.
- 520 Research Methods in Nutrition and Exercise Physiology 3** Current research designs and methods in nutrition and exercise physiology including behavioral and basic sciences emphasizing chronic disease prevention.
- 526 Advanced Community Nutrition and Health 3** Research basis of practice in community nutrition or health programs; assessment and outcome measures emphasizing chronic disease prevention.
- 537 Advanced Medical Nutrition Therapy 4** Exercise and nutrition assessment/prescription and program management in rehabilitation for populations in various disease states.
- 540 Clinical Supervised Practice 10** Clinical supervised practical experience for graduate students in coordinated program in dietetics.
- 551 Management Practices in Food Service 4** (1-9) Advanced principles and supervised experience in food systems, institutional food service management, school food service and community feeding programs.
- 573 Nutrition in the Community 2** Public health from a nutrition perspective including current issues in nutrition healthcare, overview of existing programs and assessment of program planning.
- 577 Introduction to Research 3** Philosophy, standards, and practices of scientific inquiry and scholarship appropriate to basic, clinical, and social and administrative sciences in healthcare, and the performance expectations of researchers and scholars. (Cross-listed course offered as PHARMSCI 577, NEP 577).
- 578 Biomedical Statistics 3** Research process; techniques for conducting health services research and evaluation, critique published health services research and collect, utilize, and evaluate primary and secondary data. (Cross-listed course offered as PHARMSCI 578, NEP 578).
- 580 Advanced Topics in Exercise Physiology 3** Advanced topics in cellular and molecular physiology.
- 585 Clinical Exercise Physiology 4** Exercise and nutrition assessment/prescription and program management in rehabilitation for populations in various disease states.
- 597 College of Pharmacy Graduate Seminar 1** May be repeated for credit; cumulative maximum 12 hours. (Cross-listed course offered as PHARMSCI 597, NEP 597.)

- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Exercise Science

Degree offered: Master of Science in Exercise Science – Non Thesis

Faculty working with graduate students: 9

Program offered: Spokane

Tests required: TOEFLI

Deadline: Fall: February 1

Program Description

WSU Spokane offers the only research-based Exercise Science graduate program in Washington State that focuses on clinical and experimental exercise physiology with an emphasis on cellular and molecular mechanisms. The core curriculum provides a foundation in the study of the cellular mechanisms that regulate physiological responses to exercise and the molecular mechanisms that govern these cellular responses. Research methods and statistics courses provide preparatory study in research design and analysis for future project/thesis work.

Degree Description

The MS NEP is a research-based graduate program that focuses on nutrition and exercise physiology. The non-thesis option focuses on clinical nutrition and exercise physiology. The graduate curriculum provides a foundation in the study of the cellular mechanisms that regulate physiological responses and the molecular mechanisms that govern these cellular responses.

NURS

- 503 Scientific Inquiry in Nursing 2** Course prerequisite: Graduate standing in Nursing. Scientific inquiry applied to theoretical and philosophical foundations in nursing.
- 504 Evidence-Based Practice 3** Course prerequisite: NURS 503 or concurrent enrollment, or in graduate Nursing Certificate program. Exploration of evidence-based practice through the conduct of scientific inquiry and application of credible evidence.
- 505 Nursing Practice Inquiry V** 1 (0-3) to 4 (0-12) Course prerequisite: NURS 539; NURS 565; NURS 576. Analysis and development of a practice inquiry proposal based on a practice concern of interest to the student.
- 506 Nursing Practice Capstone V** 1 (0-3) to 4 (0-12) Course prerequisite: NURS 505; NURS 539; NURS 565; NURS 576. Translational research project including measurement of outcomes, analysis of results and the dissemination of recommendations for practice.
- 507 Health Care Policy Analysis V** 2-3 Analysis of health care system policy; exploration of issues of clinical management and community resource utilization including advocacy techniques.
- 511 Rural and Cultural Competencies for Population Health 2** Course prerequisite: Graduate standing in Nursing. Rural, cultural and research competencies necessary for reducing health disparities to increase access to care for local and global populations.
- 512 Rural and Cultural Competencies for Population Health Practicum V** 1-2 Course prerequisite: NURS 511; graduate standing in Nursing. Rural, cultural and research competencies necessary for reducing health disparities to increase access to care in the practice setting.
- 517 Quality Improvement and Program Evaluation 3** Principal dimensions of healthcare quality management including quality measurement and continuous quality improvement.
- 518 Translating Evidence into Practice 3** Course prerequisite: Graduate standing in Nursing. Health related evidence and development of skills to apply evidence in advanced practice.
- 519 Teaching in the Information Age 3** Course Prerequisite: By instructor permission. Focus on educational paradigms consistent with distance education; development of a variety of multimedia materials for nursing education. Required preparation: Basic computer skills.
- 520 Nursing Education in a Multicultural Society V** 3 (0-9) to 5 (0-15) Course Prerequisite: By instructor permission. Application of learning theories and strategies useful in teaching diverse populations; taught in a distance degree format.

- 521 Teaching, Learning and Evaluation in Nursing V** 3-6 Exploration of concepts related to teaching-learning, assessment of diverse learning needs, instructional strategies and design, evaluation of performance outcomes.
- 523 Educational Issues and Curriculum Analysis V** 3-5 Exploration of curriculum history, development, future predictions; program evaluation, instructional resources, leadership, and policy development in academic and service settings.
- 524 Foundations of Methodological Applications for Health Sciences 2** Qualitative and quantitative methods in health care; research, statistics, and interpretation language.
- 525 Psychopharmacology 3** Clinical psychopharmacology across the lifespan including pharmacokinetics, pharmacodynamics, principles of prescribing, client education and outcome monitoring.
- 526 Analytical Foundations for Health Sciences 3** Quantitative methods, research and statistics in current health care literature. Required preparation must include college-level statistics course.
- 527 Association, Group Difference and Regression Techniques for Health Services 3** Course Prerequisite: NURS 526. Application of quantitative techniques to explore relationships and group differences among variables supporting questions in health science research. Required preparation: Graduate-level statistics course.
- 528 Multivariate Statistical Techniques for Health Sciences 3** Course Prerequisite: NURS 527. Application of quantitative techniques to explore multivariate relationships among variables supporting questions in health science research.
- 529 Analytical Seminar for Health Science 3** In-depth research methods used for health science research.
- 531 Culture, Populations, and Family Health Care 3** Diverse health beliefs and practices of clients, families, and members of the interdisciplinary health care team.
- 532 Resource Stewardship in Health Care 3** Theory, research and practice dimensions of resource stewardship to effectively manage human and material resources in the practice setting.
- 534 Research Seminar: Grant Development 1** Seminar focusing on grant writing and advanced skills for critically reviewing grant applications.
- 535 Philosophy of Nursing Science 2** Course prerequisite: Graduate standing in Nursing; NURS 534 or concurrent enrollment. Structure and organization of fields of knowledge in science including historical and philosophical tenets of inquiry.
- 536 Nursing Theory: Foundations for Knowledge Development 2** Course prerequisite: Graduate standing in Nursing. Theory development analysis; theory critique; nursing knowledge examination; impact of theory on nursing science, applied to student's phenomenon of interest.
- 539 Scientific Foundations of the Advanced Practice Nursing Role 2** Course prerequisite: Graduate standing in Nursing. Analysis of the foundations of the Advanced Practice Nursing role emphasizing the integration of practice inquiry and advanced practice.
- 540 Internship: Practicum in Advancing the FNP Primary Care Role V** 1-10 May be repeated for credit; cumulative maximum 10 hours. Primary Care Practicum experience requiring the supervised provision of increasingly complex direct patient care.
- 541 Psychiatric/Mental Health Nursing: Individuals 4** (3-3) Course prerequisite: Graduate standing in Nursing; NURS 562; NURS 581 or concurrent enrollment. Theories of psychopathology and appropriate nursing interventions with individuals across the age continuum.
- 543 Psychiatric Mental Health Nursing 4** (3-3) Course prerequisite: NURS 541; NURS 581. Introduction to theory and practice of group psychotherapy; Milieu and other selected theories studied and applied to nursing practice.
- 546 Practicum in Psychiatric/Mental Health Nursing V** 4 (1-9) to 5 (1-12) Course prerequisite: Graduate standing in Nursing; NURS 525; NURS 541; NURS 543; NURS 562; NURS 581. Individualized clinical experience/seminar designed to provide advanced competency, accountability, leadership in psychiatric/mental health nursing.
- 548 Psychiatric Nurse Practitioner Internship V** 1-9 May be repeated for credit; cumulative maximum 9 hours. Course prerequisite: Graduate standing in Nursing; NURS 525; NURS 546; by interview only. Application and integration of theory, research findings, and interventions in the primary care of clients with psychiatric disorders.
- 549 Addiction Perspectives 2** Overview of the theories, physiology, course and epidemiology of addictions; assessment, evaluation, prevention and treatment.
- 550 International, Interdisciplinary, and Transcultural Health Care 3** Diverse health beliefs and practices of clients and members of the interdisciplinary health care team.
- 551 Risk and Resilience in Child and Adolescent Health 4** Risk and resilience models in the development of strengths-based health interventions for child and adolescent populations.
- 552 Family Nursing in the Community V** 2-4 Theoretical approaches to the analysis of normal and at-risk families; application of family assessment and intervention models when planning care.
- 553 Seminar in Interprofessional Collaboration 1** Course prerequisite: Graduate standing in Nursing. Leadership and collaboration efforts among professionals with clients and community partners.
- 554 Epidemiology and Biostatistics for Health Professions 3** Introduction to epidemiology: principles and methods of epidemiologic investigation including analysis of key elements of investigation of high risk populations. Required preparation must include college-level statistics course.
- 556 Advanced Population Health V** 2-6 Course Prerequisite: Graduate student in Nursing; instructor permission. Culminating analysis, development, and enactment of advanced practice roles in teaching, practice, or administration of community-based/population-focused nursing.

- 561 Advanced Assessment and Diagnosis for the Psychiatric Mental Health Practitioner 3** Course prerequisite: Graduate standing in Nursing. Assessment and diagnosis of psychiatric illnesses; focus on physical and psychiatric history, mental status exam and strategies of psychometric evaluation.
- 562 Advanced Health Assessment and Differential Diagnoses 3 (2-3)** Course prerequisite: Graduate standing in Nursing. Applying health assessment and differential diagnostic skills to individuals, families, and populations in rural, urban, and medically under-served areas.
- 563 Advanced Pharmacological Concepts and Practice 3** Pharmacology for clinical practice including decision making, prescribing, drug monitoring, and patient education associated with prescriptive authority.
- 564 Health Promotion in Nursing Practice V 2-3** Interprofessional course analyzing the theoretical bases for developing and evaluating health promotion strategies tailored to variations in health behaviors.
- 565 Information Management for Clinical Practice 3** Application/evaluation of nursing informatics; information systems to support clinical research, practice, administration, and education. Required preparation must include competency in word processing/spreadsheets.
- 566 Community Analysis and Grant Development 2** Application of core public health functions in community analysis, program development and program evaluation.
- 567 Primary Care of Families: Adults and Elders 4 (1-9)** Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, therapeutic intervention with adults; developmental changes; opportunities to provide diagnostic, maintenance, and follow-up care.
- 568 Primary Care of Families: Infants, Children and Adolescents 4 (1-9)** Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, and therapeutic intervention with infants, children, and adolescents in rural and urban settings.
- 569 Primary Care of Families: Family 4 (1-9)** Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, therapeutic intervention with individuals in childbearing, childrearing, and multigenerational families.
- 570 Clinical Decision Making 1 (0-3)** Course prerequisite: NURS 581; NURS 562; NURS 563; concurrent with first clinical course (NURS 567, 568, or 569). Provides a framework for systematic collection, organization, interpretation, and communication of data for the development of differential diagnosis.
- 572 Nursing Science: Research and Theory of Chronic Conditions 2** Course prerequisite: NURS 536. Concepts, theories and research relevant to preventing and managing chronic conditions across the lifespan.
- 573 Rational Prescribing 2** Course Prerequisite: NURS 563; admission to FNP program. Pharmacology for clinical practice including decision-making, prescribing, drug monitoring, and patient education associated with prescriptive authority.
- 574 Nursing Sciences: Research and Theory of Acute Conditions 2** Course prerequisite: NURS 536. Research methods, procedures and analysis of acute phenomena in nursing with a focus on vulnerable populations.
- 575 Diagnostic Testing and Interpretation 3 (2-3)** Course prerequisite: Admission to FNP program. Analysis of diagnostic findings across the age continuum for clinical decision making; selected diagnostic and treatment skills for advanced practice.
- 576 Organizational Systems and Leadership 3** Integration of leadership competencies and resource stewardship for nurse leaders in a constantly changing health care environment.
- 577 Health Care Ethics V 2-3** Ethical theories including deontology, teleology, virtue ethics and applicability to ethical dilemmas in nursing. Credit not granted for both NURS 477 and NURS 577.
- 578 Plateau Tribes: Culture and Health 3 (2-3)** Course Prerequisite: Graduate standing in Nursing, Nutrition and Exercise Physiology, or Pharmacy. History, culture, and health care needs of the Plateau Indian tribes; both classroom and practicum experience. Credit not granted for both NURS 478 and NURS 578.
- 580 Practicum in Advanced Nursing Practice V 1 (0-3) to 5 (0-15)** Course prerequisite: NURS 539; concurrent enrollment in NURS 576. Integration and synthesis of practice inquiry; leadership and advanced practice to demonstrate competency in an area of advanced practice nursing.
- 581 Advanced Pathophysiology 3** Etiology, pathogenesis, manifestations, and outcomes of disruption and dysfunction of human physiology.
- 584 Theory and Policy Development in Systems of Health Care Delivery 2** Course prerequisite: NURS 536. Health care delivery systems in the US and worldwide addressing barriers to care, social justice, vulnerability and access disparity.
- 585 Faculty Role Seminar 1** Course prerequisite: Graduate standing in Nursing. Analysis of current issues related to the faculty role in nursing education.
- 586 Faculty Role Practicum 2** Course prerequisite: Graduate standing in Nursing. Analysis, development, and enactment of selected aspects of the faculty role.
- 587 Research Inquiry: Qualitative Methods I 3** Qualitative methodologies, issues and techniques of data collection, analysis and interpretation; issues of ethics and bias.
- 588 Research Inquiry: Quantitative Methods I 3** Quantitative methodologies, issues and techniques of data collection, analysis and interpretation.
- 589 Psychometrics in Health Care Research 2** Course prerequisite: NURS 526; NURS 527; 588. Application of psychometric theory and techniques for constructing, analyzing and testing instruments to measure nursing and educational interventions and outcomes.
- 590 Research Inquiry: Quantitative Methods II 2** Course prerequisite: NURS 588; NURS 589. Advanced theoretical and practical application of selected quantitative and methodological strategies.

- 591 Mixed Methods for Program Development 2** Program development, implementation, and outcomes evaluation in healthcare will be addressed primarily from a mixed methods and application perspective.
- 592 Research Inquiry: Qualitative Methods II 2** Course prerequisite: NURS 587. Application of qualitative methodologies, techniques of qualitative data analysis, presentation of qualitative findings, rigor, data management and research dissemination.
- 593 Preliminary Examination Seminar 1** Course prerequisite: PhD in Nursing; completion of 30 core credits; by permission only. Methods to synthesize material from coursework to present and analyze scholarly nursing science knowledge.
- 594 Community-Based Care of At-Risk Adults and Marginalized Adult Populations 3** Analysis and evaluation of strategies, interventions and programs to promote health of at-risk adults, older adults and marginalized adult populations.
- 595 Internship V 1-10** May be repeated for credit; cumulative maximum 10 hours. Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581; one of NURS 567, 568, 569, 571, or 572. Application and integration of theoretical content, research findings, and assessment and intervention strategies into primary care practice.
- 597 Advanced Topics in Nursing V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Graduate student in Nursing; instructor permission. Specialized topics within the discipline; content will vary each term.
- 598 Advanced Topics in Nursing V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Graduate student in Nursing; instructor permission. Specialized topics within the discipline; content will vary each term.
- 599 Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Graduate student in Nursing; instructor permission.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 799 Dissertation Seminar 1** May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Best practices for doctoral research and presentation.

- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Family Nurse Practitioner – Cert in Family Nurse Practition

Degree offered: Graduate Certificate in Family Nurse Practitioner

Faculty working with graduate students: 57

Graduate students: 10

Graduate students receiving assistantships or scholarships: 40%

Program offered: Spokane, Tri-Cities, Vancouver

Tests required: TOEFL, TOEFLI

Deadline: Fall: February 1

Spring: October 1

Requirements

A personalized program of study is developed at the time of acceptance into the program. Certificate requirements are individualized based on prior MN education. At this point, only prior WSU credits meet the requirements of this certificate program.

Program Description

The MN degree program prepares advanced-practice nurses with leadership skills to plan, implement, coordinate and evaluate health care, as well as formulate policy for a diverse and multi-cultural society. It also prepares advanced-practice nurses to work with health care providers and those in other occupations to plan and provide high quality care. A post-Master's program is also available for nurse practitioner students.

Degree Description

The Master's program is described in the WSU on-line annual catalog. Students with a master's degree in nursing with specialization in another field are eligible for review to complete courses specific to the Family Nurse Practitioner program and receive a certificate of completion.

Training and Professional Development Opportunities

Some opportunities exist for: teaching assistantships, research assistantships, clinical internships and international medical work.

Post-Graduate Employment Opportunities

Family nurse practitioner positions

Post-Graduate Career Placements

FNP positions in such places as clinics, offices, hospitals, rural and urban areas.

NURS

- 503 Scientific Inquiry in Nursing 2** Course prerequisite: Graduate standing in Nursing. Scientific inquiry applied to theoretical and philosophical foundations in nursing.
- 504 Evidence-Based Practice 3** Course prerequisite: NURS 503 or concurrent enrollment, or in graduate Nursing Certificate program. Exploration of evidence-based practice through the conduct of scientific inquiry and application of credible evidence.
- 505 Nursing Practice Inquiry V 1 (0-3) to 4 (0-12)** Course prerequisite: NURS 539; NURS 565; NURS 576. Analysis and development of a practice inquiry proposal based on a practice concern of interest to the student.
- 506 Nursing Practice Capstone V 1 (0-3) to 4 (0-12)** Course prerequisite: NURS 505; NURS 539; NURS 565; NURS 576. Translational research project including measurement of outcomes, analysis of results and the dissemination of recommendations for practice.
- 507 Health Care Policy Analysis V 2-3** Analysis of health care system policy; exploration of issues of clinical management and community resource utilization including advocacy techniques.
- 511 Rural and Cultural Competencies for Population Health 2** Course prerequisite: Graduate standing in Nursing. Rural, cultural and research competencies necessary for reducing health disparities to increase access to care for local and global populations.
- 512 Rural and Cultural Competencies for Population Health Practicum V 1-2** Course prerequisite: NURS 511; graduate standing in Nursing. Rural, cultural and research competencies necessary for reducing health disparities to increase access to care in the practice setting.
- 517 Quality Improvement and Program Evaluation 3** Principal dimensions of healthcare quality management including quality measurement and continuous quality improvement.
- 518 Translating Evidence into Practice 3** Course prerequisite: Graduate standing in Nursing. Health related evidence and development of skills to apply evidence in advanced practice.
- 519 Teaching in the Information Age 3** Course Prerequisite: By instructor permission. Focus on educational paradigms consistent with distance education; development of a variety of multimedia materials for nursing education. Required preparation: Basic computer skills.
- 520 Nursing Education in a Multicultural Society V 3 (0-9) to 5 (0-15)** Course Prerequisite: By instructor permission. Application of learning theories and strategies useful in teaching diverse populations; taught in a distance degree format.
- 521 Teaching, Learning and Evaluation in Nursing V 3-6** Exploration of concepts related to teaching-learning, assessment of diverse learning needs, instructional strategies and design, evaluation of performance outcomes.
- 523 Educational Issues and Curriculum Analysis V 3-5** Exploration of curriculum history, development, future predictions; program evaluation, instructional resources, leadership, and policy development in academic and service settings.
- 524 Foundations of Methodological Applications for Health Sciences 2** Qualitative and quantitative methods in health care; research, statistics, and interpretation language.
- 525 Psychopharmacology 3** Clinical psychopharmacology across the lifespan including pharmacokinetics, pharmacodynamics, principles of prescribing, client education and outcome monitoring.
- 526 Analytical Foundations for Health Sciences 3** Quantitative methods, research and statistics in current health care literature. Required preparation must include college-level statistics course.
- 527 Association, Group Difference and Regression Techniques for Health Services 3** Course Prerequisite: NURS 526. Application of quantitative techniques to explore relationships and group differences among variables supporting questions in health science research. Required preparation: Graduate-level statistics course.
- 528 Multivariate Statistical Techniques for Health Sciences 3** Course Prerequisite: NURS 527. Application of quantitative techniques to explore multivariate relationships among variables supporting questions in health science research.
- 529 Analytical Seminar for Health Science 3** In-depth research methods used for health science research.
- 531 Culture, Populations, and Family Health Care 3** Diverse health beliefs and practices of clients, families, and members of the interdisciplinary health care team.

- 532 Resource Stewardship in Health Care 3** Theory, research and practice dimensions of resource stewardship to effectively manage human and material resources in the practice setting.
- 534 Research Seminar: Grant Development 1** Seminar focusing on grant writing and advanced skills for critically reviewing grant applications.
- 535 Philosophy of Nursing Science 2** Course prerequisite: Graduate standing in Nursing; NURS 534 or concurrent enrollment. Structure and organization of fields of knowledge in science including historical and philosophical tenets of inquiry.
- 536 Nursing Theory: Foundations for Knowledge Development 2** Course prerequisite: Graduate standing in Nursing. Theory development analysis; theory critique; nursing knowledge examination; impact of theory on nursing science, applied to student's phenomenon of interest.
- 539 Scientific Foundations of the Advanced Practice Nursing Role 2** Course prerequisite: Graduate standing in Nursing. Analysis of the foundations of the Advanced Practice Nursing role emphasizing the integration of practice inquiry and advanced practice.
- 540 Internship: Practicum in Advancing the FNP Primary Care Role V 1-10** May be repeated for credit; cumulative maximum 10 hours. Primary Care Practicum experience requiring the supervised provision of increasingly complex direct patient care.
- 541 Psychiatric/Mental Health Nursing: Individuals 4 (3-3)** Course prerequisite: Graduate standing in Nursing; NURS 562; NURS 581 or concurrent enrollment. Theories of psychopathology and appropriate nursing interventions with individuals across the age continuum.
- 543 Psychiatric Mental Health Nursing 4 (3-3)** Course prerequisite: NURS 541; NURS 581. Introduction to theory and practice of group psychotherapy; Milieu and other selected theories studied and applied to nursing practice.
- 546 Practicum in Psychiatric/Mental Health Nursing V 4 (1-9) to 5 (1-12)** Course prerequisite: Graduate standing in Nursing; NURS 525; NURS 541; NURS 543; NURS 562; NURS 581. Individualized clinical experience/seminar designed to provide advanced competency, accountability, leadership in psychiatric/mental health nursing.
- 548 Psychiatric Nurse Practitioner Internship V 1-9** May be repeated for credit; cumulative maximum 9 hours. Course prerequisite: Graduate standing in Nursing; NURS 525; NURS 546; by interview only. Application and integration of theory, research findings, and interventions in the primary care of clients with psychiatric disorders.
- 549 Addiction Perspectives 2** Overview of the theories, physiology, course and epidemiology of addictions; assessment, evaluation, prevention and treatment.
- 550 International, Interdisciplinary, and Transcultural Health Care 3** Diverse health beliefs and practices or clients and members of the interdisciplinary health care team.
- 551 Risk and Resilience in Child and Adolescent Health 4** Risk and resilience models in the development of strengths-based health interventions for child and adolescent populations.
- 552 Family Nursing in the Community V 2-4** Theoretical approaches to the analysis of normal and at-risk families; application of family assessment and intervention models when planning care.
- 553 Seminar in Interprofessional Collaboration 1** Course prerequisite: Graduate standing in Nursing. Leadership and collaboration efforts among professionals with clients and community partners.
- 554 Epidemiology and Biostatistics for Health Professions 3** Introduction to epidemiology: principles and methods of epidemiologic investigation including analysis of key elements of investigation of high risk populations. Required preparation must include college-level statistics course.
- 556 Advanced Population Health V 2-6** Course Prerequisite: Graduate student in Nursing; instructor permission. Culminating analysis, development, and enactment of advanced practice roles in teaching, practice, or administration of community-based/population-focused nursing.
- 561 Advanced Assessment and Diagnosis for the Psychiatric Mental Health Practitioner 3** Course prerequisite: Graduate standing in Nursing. Assessment and diagnosis of psychiatric illnesses; focus on physical and psychiatric history, mental status exam and strategies of psychometric evaluation.
- 562 Advanced Health Assessment and Differential Diagnoses 3 (2-3)** Course prerequisite: Graduate standing in Nursing. Applying health assessment and differential diagnostic skills to individuals, families, and populations in rural, urban, and medically under-served areas.
- 563 Advanced Pharmacological Concepts and Practice 3** Pharmacology for clinical practice including decision making, prescribing, drug monitoring, and patient education associated with prescriptive authority.
- 564 Health Promotion in Nursing Practice V 2-3** Interprofessional course analyzing the theoretical bases for developing and evaluating health promotion strategies tailored to variations in health behaviors.
- 565 Information Management for Clinical Practice 3** Application/evaluation of nursing informatics; information systems to support clinical research, practice, administration, and education. Required preparation must include competency in word processing/spreadsheets.
- 566 Community Analysis and Grant Development 2** Application of core public health functions in community analysis, program development and program evaluation.
- 567 Primary Care of Families: Adults and Elders 4 (1-9)** Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, therapeutic intervention with adults; developmental changes; opportunities to provide diagnostic, maintenance, and follow-up care.
- 568 Primary Care of Families: Infants, Children and Adolescents 4 (1-9)** Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, and therapeutic intervention with infants, children, and adolescents in rural and urban settings.

- 569 Primary Care of Families: Family 4** (1-9) Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581. Assessment, differential diagnosis, therapeutic intervention with individuals in childbearing, childrearing, and multigenerational families.
- 570 Clinical Decision Making 1** (0-3) Course prerequisite: NURS 581; NURS 562; NURS 563; concurrent with first clinical course (NURS 567, 568, or 569). Provides a framework for systematic collection, organization, interpretation, and communication of data for the development of differential diagnosis.
- 572 Nursing Science: Research and Theory of Chronic Conditions 2** Course prerequisite: NURS 536. Concepts, theories and research relevant to preventing and managing chronic conditions across the lifespan.
- 573 Rational Prescribing 2** Course Prerequisite: NURS 563; admission to FNP program. Pharmacology for clinical practice including decision-making, prescribing, drug monitoring, and patient education associated with prescriptive authority.
- 574 Nursing Sciences: Research and Theory of Acute Conditions 2** Course prerequisite: NURS 536. Research methods, procedures and analysis of acute phenomena in nursing with a focus on vulnerable populations.
- 575 Diagnostic Testing and Interpretation 3** (2-3) Course prerequisite: Admission to FNP program. Analysis of diagnostic findings across the age continuum for clinical decision making; selected diagnostic and treatment skills for advanced practice.
- 576 Organizational Systems and Leadership 3** Integration of leadership competencies and resource stewardship for nurse leaders in a constantly changing health care environment.
- 577 Health Care Ethics V** 2-3 Ethical theories including deontology, teleology, virtue ethics and applicability to ethical dilemmas in nursing. Credit not granted for both NURS 477 and NURS 577.
- 578 Plateau Tribes: Culture and Health 3** (2-3) Course Prerequisite: Graduate standing in Nursing, Nutrition and Exercise Physiology, or Pharmacy. History, culture, and health care needs of the Plateau Indian tribes; both classroom and practicum experience. Credit not granted for both NURS 478 and NURS 578.
- 580 Practicum in Advanced Nursing Practice V** 1 (0-3) to 5 (0-15) Course prerequisite: NURS 539; concurrent enrollment in NURS 576. Integration and synthesis of practice inquiry; leadership and advanced practice to demonstrate competency in an area of advanced practice nursing.
- 581 Advanced Pathophysiology 3** Etiology, pathogenesis, manifestations, and outcomes of disruption and dysfunction of human physiology.
- 584 Theory and Policy Development in Systems of Health Care Delivery 2** Course prerequisite: NURS 536. Health care delivery systems in the US and worldwide addressing barriers to care, social justice, vulnerability and access disparity.
- 585 Faculty Role Seminar 1** Course prerequisite: Graduate standing in Nursing. Analysis of current issues related to the faculty role in nursing education.
- 586 Faculty Role Practicum 2** Course prerequisite: Graduate standing in Nursing. Analysis, development, and enactment of selected aspects of the faculty role.
- 587 Research Inquiry: Qualitative Methods I** 3 Qualitative methodologies, issues and techniques of data collection, analysis and interpretation; issues of ethics and bias.
- 588 Research Inquiry: Quantitative Methods I** 3 Quantitative methodologies, issues and techniques of data collection, analysis and interpretation.
- 589 Psychometrics in Health Care Research 2** Course prerequisite: NURS 526; NURS 527; 588. Application of psychometric theory and techniques for constructing, analyzing and testing instruments to measure nursing and educational interventions and outcomes.
- 590 Research Inquiry: Quantitative Methods II** 2 Course prerequisite: NURS 588; NURS 589. Advanced theoretical and practical application of selected quantitative and methodological strategies.
- 591 Mixed Methods for Program Development 2** Program development, implementation, and outcomes evaluation in healthcare will be addressed primarily from a mixed methods and application perspective.
- 592 Research Inquiry: Qualitative Methods II** 2 Course prerequisite: NURS 587. Application of qualitative methodologies, techniques of qualitative data analysis, presentation of qualitative findings, rigor, data management and research dissemination.
- 593 Preliminary Examination Seminar 1** Course prerequisite: PhD in Nursing; completion of 30 core credits; by permission only. Methods to synthesize material from coursework to present and analyze scholarly nursing science knowledge.
- 594 Community-Based Care of At-Risk Adults and Marginalized Adult Populations 3** Analysis and evaluation of strategies, interventions and programs to promote health of at-risk adults, older adults and marginalized adult populations.
- 595 Internship V** 1-10 May be repeated for credit; cumulative maximum 10 hours. Course prerequisite: Admission to FNP program; NURS 562; NURS 563; NURS 581; one of NURS 567, 568, 569, 571, or 572. Application and integration of theoretical content, research findings, and assessment and intervention strategies into primary care practice.
- 597 Advanced Topics in Nursing V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Graduate student in Nursing; instructor permission. Specialized topics within the discipline; content will vary each term.
- 598 Advanced Topics in Nursing V** 1-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: Graduate student in Nursing; instructor permission. Specialized topics within the discipline; content will vary each term.
- 599 Independent Study V** 1-18 May be repeated for credit. Course Prerequisite: Graduate student in Nursing; instructor permission.

- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 799 Dissertation Seminar 1** May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Best practices for doctoral research and presentation.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Course prerequisite: Graduate standing in Nursing. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Fine Arts

Degree offered: Master of Fine Arts

Faculty working with graduate students: 12

Graduate students: 14

Graduate students receiving assistantships or scholarships: 100%

Tests required: TOEFL

Deadline: Fall: January 15

Spring: July 1

Program Description

The Fine Arts Department offers a master's program for those wishing to pursue a career in studio art. This is an interdisciplinary program where artists may focus in, but are not limited to, ceramics, drawing, digital media, painting, photography, printmaking and sculpture. Emphasis is placed on personal and conceptual artistic development. The MFA degree serves as the entry credential to college-level teaching and/or work as a practicing artist in the fine and applied arts.

Degree Description

The department offers an interdisciplinary program where students may focus in, but are not limited to, ceramics, drawing, digital media, painting, photography, printmaking, and sculpture. Emphasis is placed on personal and conceptual artistic development in light of contemporary art practices. Graduates meet with faculty for one-on-one studio discussions. First year students have an exhibition in the departmental gallery and the second year

program culminates in a thesis exhibition held in the Museum of Art. A final oral examination is also required. The degrees requires 24-30 credit hours in a major emphasis, 6-9 credit hours in a relative minor, 6 credit hours in seminar and special problems, 4 credit hours in Art History and 12 credit hours of Thesis (MFA exhibition and written thesis.)

Training and Professional Development Opportunities

Training and Professional Development Opportunities;-Opportunities are available for students to work in a professional museum context and learn to install exhibitions, give tours etc.-Our galleries in Fine Arts also enhance.-Endowed Visiting Artist program enables students to work one on one with professional artists in the field. These artists give critical feedback to our students in the form of studio visits.

Post-Graduate Employment Opportunities

Post Graduate Employment Opportunities;-Teaching at the college/university level.-Professional Artist-Curatorial/Gallery work.

Post-Graduate Career Placements

Post -Grad Career Placement; WSU Museum of Art, Teaching Middleton, Texas Adjunct Teaching at WSU and Tri Cities, Teaching at Missouri State University Teaching at Green River Community College Teaching at Black Hills State College and Nevada State College Adjunct Professor of Art, Prince George's Community College in MD

Fine Arts

F A

- 500 Graduate Art History 2** May be repeated for credit; cumulative maximum 6 hours.
- 510 Graduate Drawing 3** May be repeated for credit; cumulative maximum 9 hours.
- 511 Graduate Drawing 3** May be repeated for credit; cumulative maximum 9 hours.
- 512 Graduate Drawing 3** May be repeated for credit; cumulative maximum 9 hours.
- 520 Graduate Painting 3** May be repeated for credit; cumulative maximum 9 hours.

- 521 Graduate Painting 3** May be repeated for credit; cumulative maximum 9 hours. May be repeated for credit; cumulative maximum 9 hours.
- 522 Graduate Painting 3** May be repeated for credit; cumulative maximum 9 hours.
- 530 Graduate Digital Media 3** May be repeated for credit; cumulative maximum 9 hours.
- 531 Graduate Digital Media 3** May be repeated for credit; cumulative maximum 9 hours.
- 532 Graduate Digital Media 3** May be repeated for credit; cumulative maximum 9 hours.
- 540 Graduate Ceramics 3** May be repeated for credit; cumulative maximum 9 hours.
- 541 Graduate Ceramics 3** May be repeated for credit; cumulative maximum 9 hours.
- 542 Graduate Ceramics 3** May be repeated for credit; cumulative maximum 9 hours.
- 550 Graduate Sculpture 3** May be repeated for credit; cumulative maximum 9 hours.
- 551 Graduate Sculpture 3** May be repeated for credit; cumulative maximum 9 hours.
- 552 Graduate Sculpture 3** May be repeated for credit; cumulative maximum 9 hours.
- 570 Graduate Printmaking 3** May be repeated for credit; cumulative maximum 9 hours.
- 571 Graduate Printmaking 3** May be repeated for credit; cumulative maximum 9 hours.
- 572 Graduate Printmaking 3** May be repeated for credit; cumulative maximum 9 hours.
- 580 Graduate Photography 3** May be repeated for credit; cumulative maximum 9 hours.
- 581 Graduate Photography 3** May be repeated for credit; cumulative maximum 9 hours.
- 582 Graduate Photography 3** May be repeated for credit; cumulative maximum 9 hours.
- 598 Graduate Seminar 2** May be repeated for credit; cumulative maximum 6 hours. Topics in contemporary issues, theory, and criticism.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

Food Science

Degree offered: Doctor of Philosophy (Food Science)

Faculty working with graduate students: 22

Graduate students: 18

Graduate students receiving assistantships or scholarships: 88%

Tests required: GRE (Combined), TOEFL, TOEFLI

Deadline: Fall: January 10

Spring: July 1

Requirements

Complete courses in food chemistry, food microbiology, food processing, advanced food science, seminars, statistics, research, and college teaching course. Present research proposal, complete teaching requirements in food science courses, and pass written and oral preliminary examination.

Program Description

The School of Food Science offers graduate programs leading to Doctoral and Master's of Food Science degrees. Washington State University (WSU) and University of Idaho (UI) merged faculty and programs to become the School of Food Science (SFS). This is the first program in the nation to share teaching, research, extension programs, faculty, and resources between two states and two universities. Food Science is a multidisciplinary science that applies biology, chemistry, physics, engineering, nutrition, and other sciences to improve the safety and quality of food products; develop new food products; and design new, safer, and more energy efficient food preservation methods.

Degree Description

The School of Food Science offers graduate programs leading to Doctoral and Master's of Food Science degrees. Washington State University (WSU) and University of Idaho (UI) merged faculty and programs to become the School of Food Science (SFS). This is the first program in the nation to share teaching, research, extension programs, faculty, and resources between two states and two universities. Food Science is a multidisciplinary science that applies biology, chemistry, physics, engineering, nutrition, and other sciences to improve the safety and quality of food products; develop new food products; and design new, safer, and more energy efficient food preservation methods. Curriculum emphasizes courses in food processing, food chemistry, food microbiology, sensory evaluation, and other specialized areas. Examples include the processing and manufacturing of cereal, dairy, fruit, and vegetable products; including cheeses, wines, and potatoes. Departmental faculty and adjunct/affiliate faculty may all serve as student advisors. Faculty are housed at WSU and UI campuses, the WSU Tri-Cities campus, and the research station in Prosser, WA. Each student's program of study is individualized based on their research interests, prior academic experience, and collaboration with their major advisor.

Training and Professional Development Opportunities

Students gain research experience and leadership skills at the SFS facilities housed on the WSU and UI campuses that includes: research level chemistry, microbiology, and engineering laboratories; the WSU Creamery where on-going research on ice cream and cheese occurs, including the world renowned 'Cougar

Gold' cheese; a contemporary sensory evaluation facility where aroma, flavor and taste panels are conducted, and a processing pilot plant where small-scale equipment allows for applied research. Off-campus facilities include the Food Technology Center in Caldwell, ID., and the Irrigated Agriculture Research and Extension Center (IAREC) in Prosser, WA., in the heart of the Northwest's expanding wine and food processing industries.

Post-Graduate Employment Opportunities

Food science graduates begin careers in food research and development, food quality assurance, food safety microbiology, production management, regulatory affairs, or research in the food/allied industries or federal/state regulatory agencies.

Post-Graduate Career Placements

Food scientist, research and development scientist, food safety researcher, product and process development scientist, faculty, postdoctoral research associate, director of research, development, and technical support for large companies such as Conagra, SunOpta Fruit Group, Sorrento Lactalis, Cadbury Adams, Kraft, Continental Mills, Caravan's, PepsiCo, Safeway, Danisco, Whirlpool.

Byung-Kee Baik, Carolyn Bohach, Jeffri Bohlscheid, Boon Chew, Jeffrey Culbertson, Richard Dougherty, Charles Edwards, James Harbertson, Thomas Henick-Kling, Kerry Huber, Karen Killinger, Scott Minnich, Greg Moller, Craig Morris, Andrzej Paszczynski, Joseph Powers, Barbara Rasco, Carolyn Ross, Dojin Ryu, Denise Smith, Barry Swanson and Gulhan Unlu.

Food Science

FS

- 303 Food Processing 3** Course Prerequisite: FS 110 or 220; MATH 140 or 171; STAT 212 or concurrent enrollment. Specialized techniques, concepts and practices of food processing.
- 304 Cereal Products 2** Course Prerequisite: CHEM 345. Technical principles related to the production and commercial processing of legume and cereal foods. Field trip required.
- 416 Food Microbiology 3** Course Prerequisite: MBIOS 304; MBIOS 305. Purpose for enumeration, detection and identification of microorganisms in food products; physical, chemical and environmental factors influencing growth and survival of foodborne microorganisms; pathogenic and spoilage microorganisms in food and their control.

- 417 Food Microbiology Laboratory 2 (0-6)** Course Prerequisite: Concurrent enrollment in FS 416. Methods for enumeration, detection, and identification of spoilage and pathogenic microorganisms in foods.
- 432 Food Engineering 3** Course Prerequisite: FS 303; PHYSICS 101. Food engineering for improving the efficiency of food processing operations and quality processed food; heat transfer, stream, air-vapor mixtures, refrigeration and fluid flow.
- 433 Food Engineering Lab 1 (0-3)** Course Prerequisite: FS 432 or concurrent enrollment. To enhance the learning experience of the students taking FS 432 through laboratories, problem sessions and group discussions.
- 460 Food Chemistry 3** Course Prerequisite: CHEM 345; MBIOS 303. Fundamentals of food chemistry; composition of foods and the changes that occur during processing.
- 461 Food Chemistry Laboratory 1 (0-3)** Course Prerequisite: FS 460 or concurrent enrollment. Experiments related to the properties, reactions and interactions of chemical components of foods.
- 489 Food Product Development 3 (1-6)** Course Prerequisite: FS 303; FS 416; FS 460; senior standing. Course serves as a capstone experience for food science seniors, and will require the application of food chemistry, food processing/engineering, and microbiology course knowledge in formulating a new food product.

Food Science

STAT

- 412 Statistical Methods in Research I 3** Course Prerequisite: STAT 212, MATH 140, 171, or 202. Intermediate statistical methods, design and analysis of research studies: completely randomized and randomized block designs, multiple regression, categorical data analysis.
- 501 Topics in Food Science V 1-3** May be repeated for credit; cumulative maximum 6 hours. Selected topics in food science.
- 510 Functional Foods and Health 3** Benefits of foods beyond basic nutrition; bioactive compounds in functional foods and nutraceuticals relating to disease prevention and health promotion. Recommended preparation: BIOLOGY 101; BIOLOGY 102, or BIOLOGY 106; BIOLOGY 107; MBIOS 303.
- 511 Food Lipids 3** Occurrence, structure, chemical and physical properties; functions of lipids in foods. Recommended preparation: FS 460; MBIOS 303.
- 512 Food Proteins and Enzymes 2** Chemistry/biochemistry of proteins/enzymes applied to food research and industry; protein functionality/enzyme technology application to food industry. Recommended preparation: FS 460; MBIOS 303.
- 513 Food Carbohydrates 3** Structure function relationships of polysaccharides within food systems as a function of their respective molecular structures and physical characteristics.

- 516 Food Laws 2** Become familiar with government statutes and regulations that contribute to a safe, nutritious, and wholesome food supply. Understand more about the law and the US legal system relevant to the regulation of the manufacture and sale of food and supplements, including jurisdictional issues, administrative law, and tort, contract, corporate, environmental, labor, and criminal law issues.
- 517 Scientific Writing 2** May be repeated for credit. Fundamentals of good technical writing and presentation; preparing and writing thesis/dissertation, scientific publications, and research grants; bibliography organization and citing, statistical data analysis, and preparation of graphics, tables, and posters; reviewing and evaluating current research.
- 518 Oral Seminar 1** May be repeated for credit. Development of skills and communication tools and techniques for oral presentations of current food science research.
- 522 Sensory Evaluation of Food and Wine 3** Recommended preparation: STAT 212; FS 110 or VIT ENOL 113. Theory, principles and application of sensory evaluation techniques in appearance, aroma, flavor and texture of foods and wine. (Cross-listed course offered as FS 422, VIT ENOL 422).
- 529 Dairy Products 3** Dairy chemistry, microbiology, sanitation, product development and processing from cow to consumer. Credit not granted for both FS 429 and FS 529.
- 530 Dairy Products Lab 1 (0-3)** Course Prerequisite: Concurrent enrollment in FS 529. Hands-on skills formulating, processing, evaluating and analyzing dairy products using communication and critical thinking skills.
- 531 Advanced Food Safety and Quality 3** Analysis of the safety, regulation, protection, and quality of processed food products and their manufacturing environment.
- 538 Physical Properties of Food 2** Thermophysical behavior of foods and biopolymers, including water transport/activity, rheological, thermal, dielectric, and barrier properties; Newtonian and non-Newtonian flow; Viscous, viscoelastic, and Hookean behavior; relationship between rheology of food biopolymers and structure, composition, temperature, and plasticizer content.
- 564 Food Toxicology 3** General principles of toxicological evaluation of chemicals which enter the food chain; toxicology of food additives, colors, preservatives, drugs, pesticides and natural toxins in foods and risk characterization. Credit not granted for both FS 464 and FS 564.
- 565 Wine Microbiology and Processing 3** Technical principles related to the processing and fermentation of wines with an emphasis on microbiology. (Cross-listed course offered as FS 465, VIT ENOL 465). Recommended preparation for graduate students: MBIOS 303; MBIOS 305; MBIOS 306.
- 570 Advanced Food Technology 3** Physical principles of food preservation and recent advances in food technology. Recommended preparation: FS 416; FS 432; FS 460.
- 583 Advances in Cereal Sciences and Technology 2** Chemistry and functionality of cereal grains as related to their processing and product quality. Recommended preparation: MBIOS 303, CHEM 345, or FS 460.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.

- 530 Applied Linear Models 3** (2-2) The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3** (2-3) Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V** 1-2 May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 580 Leadership Development V** 1-3 Course Prerequisite: By permission only. Meetings and workshops designed to develop professional and leadership skills for doctoral students.
- 590 Preparation for College Teaching 2** Cross-discipline instructional development for graduate teaching assistants; course development teaching techniques, university policies and procedures.
- 591 Interdisciplinary Studies 1** May be repeated for credit. Contemporary issues in interdisciplinary education and research. Open to all interested students.
- 597 Preparing the Future Professoriate 2** Course Prerequisite: By permission only. Understanding and contextual knowledge of the professoriate and issues facing higher education.
- 598 Interdisciplinary Seminar 1** May be repeated for credit; cumulative maximum 3 hours. Seminar on theory and practice of advanced interdisciplinary doctoral study.
- 698 Continuous Enrollment Status 0** This course (no credit earned) satisfies continuous enrollment status for graduate students who are not otherwise enrolled.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 899 Continuing Doctoral Status 0** May be repeated for credit; cumulative maximum 0 hours. Continuing Doctoral Status

Food Science

Degree offered: Master of Science in Food Science

Faculty working with graduate students: 22

Graduate students: 33

Graduate students receiving assistantships or scholarships: 84%

Tests required: GRE (Combined), TOEFL, TOEFLI

Deadline: Fall: January 10
Spring: July 1

Requirements

Complete courses in food chemistry, food microbiology, food processing, advanced food science, seminars, statistics, and research. Present thesis seminar.

Program Description

The School of Food Science offers graduate programs leading to Doctoral and Master's of Food Science degrees. Washington State University (WSU) and University of Idaho (UI) merged faculty and programs to become the School of Food Science (SFS). This is the first program in the nation to share teaching, research, extension programs, faculty, and resources between two states and two universities. Food Science is a multidisciplinary science that applies biology, chemistry, physics, engineering, nutrition, and other sciences to improve the safety and quality of food products; develop new food products; and design new, safer, and more energy efficient food preservation methods.

Understand more about the law and the US legal system relevant to the regulation of the manufacture and sale of food and supplements, including jurisdictional issues, administrative law, and tort, contract, corporate, environmental, labor, and criminal law issues.
- 517 Scientific Writing 2** May be repeated for credit. Fundamentals of good technical writing and presentation; preparing and writing thesis/dissertation, scientific publications, and research grants; bibliography organization and citing, statistical data analysis, and preparation of graphics, tables, and posters; reviewing and evaluating current research.
- 518 Oral Seminar 1** May be repeated for credit. Development of skills and communication tools and techniques for oral presentations of current food science research.
- 522 Sensory Evaluation of Food and Wine 3** Recommended preparation: STAT 212; FS 110 or VIT ENOL 113. Theory, principles and application of sensory evaluation techniques in appearance, aroma, flavor and texture of foods and wine. (Cross-listed course offered as FS 422, VIT ENOL 422).
- 529 Dairy Products 3** Dairy chemistry, microbiology, sanitation, product development and processing from cow to consumer. Credit not granted for both FS 429 and FS 529.
- 530 Dairy Products Lab 1 (0-3)** Course Prerequisite: Concurrent enrollment in FS 529. Hands-on skills formulating, processing, evaluating and analyzing dairy products using communication and critical thinking skills.
- 531 Advanced Food Safety and Quality 3** Analysis of the safety, regulation, protection, and quality of processed food products and their manufacturing environment.
- 538 Physical Properties of Food 2** Thermophysical behavior of foods and biopolymers, including water transport/activity, rheological, thermal, dielectric, and barrier properties; Newtonian and non-Newtonian flow; Viscous, viscoelastic, and Hookean behavior; relationship between rheology of food biopolymers and structure, composition, temperature, and plasticizer content.
- 564 Food Toxicology 3** General principles of toxicological evaluation of chemicals which enter the food chain; toxicology of food additives, colors, preservatives, drugs, pesticides and natural toxins in foods and risk characterization. Credit not granted for both FS 464 and FS 564.
- 565 Wine Microbiology and Processing 3** Technical principles related to the processing and fermentation of wines with an emphasis on microbiology. (Cross-listed course offered as FS 465, VIT ENOL 465). Recommended preparation for graduate students: MBIOS 303; MBIOS 305; MBIOS 306.
- 570 Advanced Food Technology 3** Physical principles of food preservation and recent advances in food technology. Recommended preparation: FS 416; FS 432; FS 460.
- 583 Advances in Cereal Sciences and Technology 2** Chemistry and functionality of cereal grains as related to their processing and product quality. Recommended preparation: MBIOS 303, CHEM 345, or FS 460.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

- 508 Environmental Spatial Statistics 3** Theoretical introduction and practical training in spatial data analysis for graduate students in the environmental sciences. (Cross-listed course offered as SOIL SCI 508, STAT 508). Required preparation must include undergraduate statistics through applied multiple regression.
- 510 Topics in Probability and Statistics 3** May be repeated for credit; cumulative maximum 6 hours. Current topics in probability and statistics of mutual interest to faculty and students. Credit not granted for both STAT 410 and STAT 510. Recommended preparation: One 3-hour 300-level STAT course.
- 512 Analysis of Variance of Designed Experiments 3 (2-2)** Principles of experimental design and analysis and interpretation of data. Recommended preparation: One 3-hour 300-level STAT course.
- 516 Time Series 3** ARIMA models; identification, estimation, diagnostics, and forecasting; seasonal adjustments, outlier detection, intervention analysis and transfer function modeling. (Cross-listed course offered as MGTOP 516, STAT 516). Recommended preparation: STAT 443.
- 519 Applied Multivariate Analysis 3** Multivariate normal distribution, principal components, factor analysis, discriminant function, cluster analysis, Hotelling's T^2 and MANOVA. (Cross-listed course offered as MGTOP 519, STAT 519). Recommended preparation: STAT 443.
- 520 Statistical Analysis of Qualitative Data 3** Binomial, Poisson, multinomial distribution; contingency tables, Fisher's tests, log-linear models; ordinal data; applications in biology, business, psychology, and sociology. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 522 Biostatistics and Statistical Epidemiology 3** Rigorous approach to biostatistical and epidemiological methods including relative risk, odds ratio, cross-over designs, survival analysis and generalized linear models. Recommended preparation: Linear Algebra or Calculus I and one 3-hour 300-level STAT course.
- 523 Statistical Methods for Engineers and Scientists 3** Hypothesis testing; linear, multilinear, and nonlinear regression; analysis of variance for designed experiments; quality control; statistical computing. Credit not normally granted for both STAT 423 and 430. (Cross-listed course offered as STAT 423, MATH 423). Recommended preparation: One 3-hour 300-level STAT course.
- 530 Applied Linear Models 3 (2-2)** The design and analysis of experiments by linear models. Recommended preparation: One 3-hour 300-level STAT course.
- 533 Theory of Linear Models 3** Theoretical basis of linear regression and analysis of variance models; a unified approach based upon the generalized inverse. Recommended preparation: Linear Algebra and one 3-hour 400-level STAT theory course.
- 535 Regression Analysis 3** Conceptual development of regression; estimation, prediction, tests of hypotheses, variable selection, diagnostics, model validation, correlation, and nonlinear regression. Recommended preparation: One 3-hour 400-level STAT course.
- 536 Statistical Computing 3 (2-3)** Generation of random variables, Monte Carlo simulation, bootstrap and jackknife methods, EM algorithm, Markov chain Monte Carlo methods. (Cross-listed course offered as STAT 536, MATH 536). Recommended preparation: One 3-hour 400-level probability or STAT course.
- 544 Applied Stochastic Processes 3** Poisson and Markov processes; queuing theory; auto-covariance; stationarity; power spectra; harmonic analysis; linear mean-square predictions. Recommended preparation: One 3-hour 400-level STAT or Applied Probability course.
- 548 Statistical Theory I 3** Probability spaces, combinatorics, multidimensional random variables, characteristic function, special distributions, limit theorems, stochastic processes, order statistics. (Cross-listed course offered as STAT 548, MATH 568). Recommended preparation: Calculus III and one 3-hour 400-level probability course.
- 549 Statistical Theory II 3** Continuation of STAT 548. Statistical inferences; estimation and testing hypotheses; regression analysis; sequential analysis and nonparametric methods. (Cross-listed course offered as STAT 549, MATH 569). Recommended preparation: STAT 548.
- 556 Introduction to Statistical Theory 3** Sampling distributions; hypothesis testing and estimation; maximum likelihood; likelihood ratio tests; theory of least squares; nonparametrics. (Cross-listed course offered as STAT 456, MATH 456). Recommended preparation: One 3-hour 400-level STAT or probability course.
- 565 Analyzing Microarray and Other Genomic Data 3** Statistical issues from pre-processing (transforming, normalizing) and analyzing genomic data (differential expression, pattern discovery and predictions). Recommended preparation: Linear Algebra and one 3-hour 300-level STAT course.
- 572 Quality Control 3** Simple quality assurance tools; process monitoring; Shewhart control charts; process characterization and capability; sampling inspection; factorial experiments. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 573 Reliability 3** Probabilistic modeling and inference; product-limit estimator; probability plotting; maximum likelihood estimation with censored data; regression models for accelerated life testing. Recommended preparation: One 3-hour 300-level STAT or probability course.
- 590 Statistical Consulting Practicum V 1-2** May be repeated for credit; cumulative maximum 6 hours. Theory and practice of statistical consulting, participation in consulting session. Recommended preparation: STAT 512 and STAT 530.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Foreign Languages and Cultures

Degree offered: Master of Arts in Foreign Languages and Cultures

Faculty working with graduate students: 7

Graduate students: 12

Graduate students receiving assistantships or scholarships: 100%

Tests required: TOEFL

Deadline: Fall: February 1
Spring: N/A

Program Description

The Department of Foreign Languages and Cultures offers a Master's program in Foreign Languages, with an emphasis in Spanish. The emphasis of the program is on Spanish (Peninsular) and Latin American literature, film and culture, but seminars on foreign language pedagogy and practical teaching experience are provided. Applicants should have majors in related areas, such as literature, linguistics, and pedagogy, but applicants from other humanities and social sciences disciplines will be considered on a case by case basis, as long as they have an advanced proficiency level in all Spanish-language skills, and a solid foundation and understanding of culture.

Faculty

Eloy Gonzalez, Michael Hubert, Francisco Manzo-Robledo, Vilma Navarro-Daniels, Maria Previto, Ana Rodriguez-Vivaldi and Inigo Serna.

FOR L

- 540 Methods of Teaching Foreign Languages 3** Survey of current methodology with emphasis on practical application in the classroom. Credit not granted for both FOR LANG 440 and FOR LANG 540.
- 541 Research and Methods of Technology Enhanced Foreign Language Learning 3** Taught in English. The use of technology in the foreign language classroom; hands-on experience with equipment and multi-media materials.
- 560 Seminar in Scholarly Methodology 2** Bibliography and formal aspects of scholarly writing; general introduction to literary criticism.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

SPAN

- 550 Medieval Literature 3** Selected works. Taught in Spanish.
- 551 Seminar in Golden Age Literature 3** Reading and discussion of representative works of the Spanish Golden Age. Taught in Spanish.
- 552 Topics in Nineteenth-Century Spanish Literature 3** May be repeated for credit; cumulative maximum 6 hours. Selected works and topics. Taught in Spanish.
- 553 Topics in Twentieth-Century Spanish Literature 3** May be repeated for credit; cumulative maximum 6 hours. Selected works and topics. Taught in Spanish.
- 554 Seminar in Spanish Literature and/or Culture V 1-3** May be repeated for credit.
- 555 Seminar in Colonial Spanish American Literature 3** May be repeated for credit; cumulative maximum 6 hours. Seminar on conquest and colonial literature in Hispanic America.
- 556 Seminar in Nineteenth-Century Spanish American Literature 3** May be repeated for credit; cumulative maximum 6 hours. Study of nineteenth-century Spanish American Literature. May be relegated for credit; cumulative maximum 6 hours.
- 557 Seminar in Twentieth-Century Spanish American Literature 3** May be repeated for credit; cumulative maximum 6 hours. Study of twentieth-century Spanish American literature and culture.
- 558 Seminar in Spanish American Literature and/or Culture V 1-3** May be repeated for credit.
- 559 Special Topics in Hispanic Studies and/or Linguistics V 1-3** May be repeated for credit; cumulative maximum 6 hours. Special interdisciplinary topics in Hispanic studies and/or linguistics.
- 560 Beginning Instructional Practicum 2** May be repeated for credit; cumulative maximum 4 hours. An introduction to foreign language instruction for beginning teaching assistants.
- 561 Advanced Instructional Practicum 1** May be repeated for credit; cumulative maximum 4 hours. Supervised practical experience in foreign language teaching.
- 597 Graduate Internship V 1 (0-3) to 6 (0-18)** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: SPANISH 560; FOR LANG 540; minimum GPA of 3.50. Supervised internship experience relating to career objectives; portfolio assignment required.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.

700 Master's Research, Thesis, and/or Examination V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.

702 Master's Special Problems, Directed Study, and/or Examination V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Geology

Degree offered: Doctor of Philosophy (Geology)

Faculty working with graduate students: 8

Graduate students: 7

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: January 15

Spring: October 15

Program Description

The School of Earth & Environmental Sciences (SEES) is a new unit established August, 2006 comprised of the former Program in Environmental Science & Regional Planning and Department of Geology. The School offers a: * Master of Science in Environmental Science, * Master of Science in Geology, * Doctor of Philosophy in Environmental and Natural Resource Sciences) and * Doctor of Philosophy in Geology. The Master's degree in Environmental Science is offered at WSU Tri-Cities and WSU Vancouver, as well as at WSU-Pullman.

Degree Description

The Ph.D. dissertation should be a significant contribution to the science of geology, worthy of publication in referred international journals. Geology Ph.D. candidates are required to choose an area of specialization in Geology listed below. Each specialization outlines required courses and provides additional help to design a program. The student's program should be one of, or a combination of not more than two areas. The choice of course options and electives on the program will be based on the student's research interest and needs. Undergraduate pre-requisites must be satisfied for all courses within the selected program, and will not count for graduate credit. It is expected that the Ph.D. degree requirements with previous M.S. degree be completed in three years (full-time enrollment, with assistantship); Ph.D. degree requirements without previous M.S. degree be completed in four years.

GEOLOGY

- 505 Geophysics 4 (3-3)** Theory and application of geophysical methods for hydrology, environmental, engineering, exploration, and structural geology; review of techniques. (Cross-listed course offered as GEOLOGY 405).
- 520 Advanced Topics in Sedimentology 3 (2-3)** May be repeated for credit; cumulative maximum 6 hours. Modern aspects of sedimentary rocks. Field trip required.
- 521 Clastic Depositional Systems 3 (2-3)** Clastic sedimentary environments; architectural elements and facies analysis. Field trip required.
- 523 Advanced Topics in Stratigraphy 3** May be repeated for credit.
- 525 Carbonate Depositional Systems 3 (2-3)** Modern carbonate environments and processes; ancient carbonate rock sequences; carbonate platform-to-basin transition; diagenesis of carbonate rocks. Field trip required.
- 538 Orogenic Systems I 3** Field-base course examines tectonic processes active in the northern Cordillera. Field trip required and final research paper.
- 540 Tectonics 3** Nature and origin of the Earth's major tectonic features.
- 541 Structural Analysis 3 (2-3)** Structural analysis of complexly deformed rocks in orogenic belts. Field trip required.
- 545 Astrobiology 3** Origin, evolution, distribution and future of life in the universe; fundamental concepts of life and habitable environments on Earth and other planetary bodies within and outside of the solar system. Credit not granted for both GEOLOGY 445 and GEOLOGY 545.
- 550 Advanced Mineralogy 3** Elements of crystal chemistry and crystal physics.
- 552 Analytical Methods in Earth Sciences 3 (2-3)** Theory and practical experience in EMPA, XRD, XRF, and ICPMS analysis.
- 560 Advanced Igneous Petrology 3 (2-3)** Origin, evolution, and tectonic significance of igneous rocks. Field trip required.
- 562 Watershed Biogeochemistry 3** Sources, transformations, fates and impacts of biogeochemically important compounds as they move downstream through watersheds to the coastal zone.

- 567 Volcanology 3** (2-3) Volcanic process, eruption mechanisms, volcanic deposits, hazard assessment. Field trip required. Credit not granted for both GEOLOGY 467 and GEOLOGY 567.
- 578 Groundwater Geobiology 3** (2-3) Interaction of groundwater geology and the environment including microbial populations with emphasis on microbial transport in the sub-surface and bioremediation approaches.
- 579 Groundwater Geochemistry V** 2-4 May be repeated for credit; cumulative maximum 4 hours. Organic and inorganic aqueous geochemistry; controls on groundwater contaminant fate.
- 583 Radiogenic Isotopes and Geochronology 3** Radiogenic isotopes and their uses as chronometers (radiometric dating) and as tracers of earth evolution and differentiation.
- 584 Stable Isotope Geochemistry 3** Principles and applications of isotope geochemistry in the geological sciences.
- 588 Methods in Radiogenic Isotope Geochemistry 3** (1-6)
Course Prerequisite: GEOLOGY 583. Laboratory-based course in modern analytical methods in radiogenic isotope geochemistry.
- 595 Advanced Topics in Geology V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 596 Advanced Topics in Geology V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 597 Advanced Topics in Geology V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 598 Seminar 1** May be repeated for credit; cumulative maximum 3 hours. Research papers presented by students, faculty, and visiting scientists on geological research. Credit not granted for both GEOLOGY 498 and GEOLOGY 598.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Geology

Degree offered: Master of Science in Geology

Faculty working with graduate students: 8

Graduate students: 21

Graduate students receiving assistantships or scholarships: 100%

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: January 15

Spring: October 15

Requirements

Geology M.S. candidates must take 15 hours of 500-level graded major course work. The thesis program must consist of not less than 30 hours of approved graduate credit including a minimum of 21 hours of graded course work and 4 hours of Geol 700, Master's Research. Of these 21 hours of course work, up to 6 credits of non-graduate graded credit (300- or 400-level) may be used. The program may not include courses graded Pass/Fail, courses not approved for graduate credit, or courses that are audited. Courses taken to remove undergraduate deficiencies cannot be taken for a Pass/Fail grade. Any course included in the advanced degree program in which a grade of "C-" or below is earned must be repeated but not on a Pass/Fail basis. Geology M.S. candidates must enroll in Geol 598 (Seminar) a minimum of 2 semesters. A final oral exam is required to test the candidate's knowledge of geology with emphasis on the work presented in the thesis.

- 540 Tectonics** 3 Nature and origin of the Earth's major tectonic features.
- 541 Structural Analysis** 3 (2-3) Structural analysis of complexly deformed rocks in orogenic belts. Field trip required.
- 545 Astrobiology** 3 Origin, evolution, distribution and future of life in the universe; fundamental concepts of life and habitable environments on Earth and other planetary bodies within and outside of the solar system. Credit not granted for both GEOLOGY 445 and GEOLOGY 545.
- 550 Advanced Mineralogy** 3 Elements of crystal chemistry and crystal physics.
- 552 Analytical Methods in Earth Sciences** 3 (2-3) Theory and practical experience in EMPA, XRD, XRF, and ICPMS analysis.
- 560 Advanced Igneous Petrology** 3 (2-3) Origin, evolution, and tectonic significance of igneous rocks. Field trip required.
- 562 Watershed Biogeochemistry** 3 Sources, transformations, fates and impacts of biogeochemically important compounds as they move downstream through watersheds to the coastal zone.
- 567 Volcanology** 3 (2-3) Volcanic process, eruption mechanisms, volcanic deposits, hazard assessment. Field trip required. Credit not granted for both GEOLOGY 467 and GEOLOGY 567.
- 578 Groundwater Geobiology** 3 (2-3) Interaction of groundwater geology and the environment including microbial populations with emphasis on microbial transport in the sub-surface and bioremediation approaches.
- 579 Groundwater Geochemistry** V 2-4 May be repeated for credit; cumulative maximum 4 hours. Organic and inorganic aqueous geochemistry; controls on groundwater contaminant fate.
- 583 Radiogenic Isotopes and Geochronology** 3 Radiogenic isotopes and their uses as chronometers (radiometric dating) and as tracers of earth evolution and differentiation.
- 584 Stable Isotope Geochemistry** 3 Principles and applications of isotope geochemistry in the geological sciences.
- 588 Methods in Radiogenic Isotope Geochemistry** 3 (1-6) Course Prerequisite: GEOLOGY 583. Laboratory-based course in modern analytical methods in radiogenic isotope geochemistry.
- 595 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 596 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 597 Advanced Topics in Geology** V 1-4 May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 598 Seminar** 1 May be repeated for credit; cumulative maximum 3 hours. Research papers presented by students, faculty, and visiting scientists on geological research. Credit not granted for both GEOLOGY 498 and GEOLOGY 598.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Geology

Degree offered: Master of Science in Geology – Non Thesis

Faculty working with graduate students: 8

Tests required: GRE (Quantitative), GRE (Verbal), TOEFL, TOEFLI

Deadline: Fall: January 15

Spring: October 15

Requirements

Geology M.S. candidates must take 17 hours of 500-level graded major course work. The thesis program must consist of not less than 30 hours of approved graduate credit including a minimum of 26 hours of graded course work and 4 hours of Geol 702, Master's Special Problems. Of these 26 hours of course work, up to 9 credits of non-graduate graded credit (300- or 400-level) may be used. The program may not include courses graded Pass/Fail, courses not approved for graduate credit, or courses that are audited. Courses taken to remove undergraduate deficiencies cannot be taken for a Pass/Fail grade. Any course included in the advanced degree program in which a grade of "C-" or below is earned must be repeated but not on a Pass/Fail

basis. Geology M.S. candidates must enroll in Geol 598 (Seminar) a minimum of 2 semesters.

Program Description

The School of Earth & Environmental Sciences (SEES) is a new unit established August, 2006 comprised of the former Program in Environmental Science & Regional Planning and Department of Geology. The School offers a: * Master of Science in Environmental Science, * Master of Science in Geology, * Doctor of Philosophy in Environmental and Natural Resource Sciences) and * Doctor of Philosophy in Geology. The Master's degree in Environmental Science is offered at WSU Tri-Cities and WSU Vancouver, as well as at WSU-Pullman.

Degree Description

In the M.S. non-thesis option, a formal written project report as well as an oral exam are required. Geology M.S. candidates are required to choose an area of specialization in Geology listed below. Each specialization outlines required courses and provides additional help to design a program. The student's program should be one of, or a combination of not more than two areas. The choice of course options and electives on the program will be based on the student's research interest and needs. Undergraduate pre-requisites must be satisfied for all courses within the selected program, and will not count for graduate credit. It is expected that the M.S. degree requirements be completed in two years (full-time enrollment, with assistantship).

Catherine Cooper, David Gaylord, Chester Keller, Peter Larson, Dirk Schulze-Makuch, Jeffrey Vervoort, Anthony Watkinson and John Wolff.

GEOL

- 505 Geophysics 4** (3-3) Theory and application of geophysical methods for hydrology, environmental, engineering, exploration, and structural geology; review of techniques. (Cross-listed course offered as GEOLOGY 405).
- 520 Advanced Topics in Sedimentology 3** (2-3) May be repeated for credit; cumulative maximum 6 hours. Modern aspects of sedimentary rocks. Field trip required.
- 521 Clastic Depositional Systems 3** (2-3) Clastic sedimentary environments; architectural elements and facies analysis. Field trip required.
- 523 Advanced Topics in Stratigraphy 3** May be repeated for credit.
- 525 Carbonate Depositional Systems 3** (2-3) Modern carbonate environments and processes; ancient carbonate rock sequences; carbonate platform-to-basin transition; diagenesis of carbonate rocks. Field trip required.
- 538 Orogenic Systems I 3** Field-base course examines tectonic processes active in the northern Cordillera. Field trip required and final research paper.
- 540 Tectonics 3** Nature and origin of the Earth's major tectonic features.
- 541 Structural Analysis 3** (2-3) Structural analysis of complexly deformed rocks in orogenic belts. Field trip required.
- 545 Astrobiology 3** Origin, evolution, distribution and future of life in the universe; fundamental concepts of life and habitable environments on Earth and other planetary bodies within and outside of the solar system. Credit not granted for both GEOLOGY 445 and GEOLOGY 545.
- 550 Advanced Mineralogy 3** Elements of crystal chemistry and crystal physics.
- 552 Analytical Methods in Earth Sciences 3** (2-3) Theory and practical experience in EMPA, XRD, XRF, and ICPMS analysis.
- 560 Advanced Igneous Petrology 3** (2-3) Origin, evolution, and tectonic significance of igneous rocks. Field trip required.
- 562 Watershed Biogeochemistry 3** Sources, transformations, fates and impacts of biogeochemically important compounds as they move downstream through watersheds to the coastal zone.
- 567 Volcanology 3** (2-3) Volcanic process, eruption mechanisms, volcanic deposits, hazard assessment. Field trip required. Credit not granted for both GEOLOGY 467 and GEOLOGY 567.
- 578 Groundwater Geobiology 3** (2-3) Interaction of groundwater geology and the environment including microbial populations with emphasis on microbial transport in the sub-surface and bioremediation approaches.
- 579 Groundwater Geochemistry V 2-4** May be repeated for credit; cumulative maximum 4 hours. Organic and inorganic aqueous geochemistry; controls on groundwater contaminant fate.
- 583 Radiogenic Isotopes and Geochronology 3** Radiogenic isotopes and their uses as chronometers (radiometric dating) and as tracers of earth evolution and differentiation.
- 584 Stable Isotope Geochemistry 3** Principles and applications of isotope geochemistry in the geological sciences.
- 588 Methods in Radiogenic Isotope Geochemistry 3** (1-6) Course Prerequisite: GEOLOGY 583. Laboratory-based course in modern analytical methods in radiogenic isotope geochemistry.
- 595 Advanced Topics in Geology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 596 Advanced Topics in Geology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.
- 597 Advanced Topics in Geology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Topics of current interest in geology.

- 598 Seminar 1** May be repeated for credit; cumulative maximum 3 hours. Research papers presented by students, faculty, and visiting scientists on geological research. Credit not granted for both GEOLOGY 498 and GEOLOGY 598.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Global Justice and Security Studies – Cert in Glob Jus and Sec Studies

Degree offered: Graduate Certificate in Global Justice and Security Studies

Faculty working with graduate students: 7

Graduate students: 10

Deadline: :
Fall: January 10

Program Description

This terminal degree program is designed to provide students with a specialized qualification better suited for the pursuit of professional careers in federal, state, or local government. The GJSS program targets students intending to pursue largely non-academic, governmental careers as practitioners, whether it be in the field of homeland security, law enforcement, or as analysts within the U.S. intelligence or defense communities.

Degree Description

MA degree including the Graduate Certificate in Global and Security Studies

Training and Professional Development Opportunities

None at WSU

Post-Graduate Employment Opportunities

The GJSS program targets students intending to pursue largely non-academic, governmental careers as practitioners, whether it be in the field of homeland security, law enforcement, military

service, or as analysts within the U.S. foreign, intelligence, or defense communities.

Post-Graduate Career Placements

Many have gone on to careers in US government agencies, the military, or decided to pursue doctoral studies.

POL S

- 400 Political Science Issues 3** May be repeated for credit; cumulative maximum 6 hours. Current issues in political science.
- 424 US National Security Policy 3** Substantive and theoretical research on issues relevant to formulation and requirements of post-Cold War, US national security and defense policy.
- 427 United States Foreign Relations 3** Ends and means in foreign policy; organization, management, control, and current policy issues. (Cross-listed course offered as POL S 427, HISTORY 486).
- 428 Issues in Political Psychology 3** Course Prerequisite: POL S 101 or PSYCH 105; junior standing. Introduction to the ways in which psychological factors influence political phenomena.
- 429 Special Topics in American Foreign and Defense Policy 3** May be repeated for credit; cumulative maximum 6 hours. Current issues in foreign policy.
- 505 Comparative Criminal Justice 3** Comparative study of crime laws and criminal justice systems in selected foreign countries. (Cross-listed course offered as CRM J 505, POL S 505).
- 510 Leadership in Criminal Justice 3** Study of leadership models and theories as they apply to criminal justice institutions.
- 511 Criminal Justice Management 3** Examines the theoretical framework for understanding criminal justice organizations through examining management theory, organizational dynamics, and administration research.
- 512 Juvenile Justice 3** Examination of the major theories and contemporary issues related to juvenile delinquency, the juvenile justice system, gangs, and juvenile corrections.
- 513 Multicultural Issues in Criminal Justice 3** Critical examination of race, gender, and other diversity and cultural issues within the U.S. criminal justice system.
- 514 Professional Development in Criminal Justice and Criminology 1** Professional aspects of research, teaching, and service activities in criminal justice and criminology.
- 520 Criminal Justice Research Methods 3** The design and execution of criminal justice research; critical examination of current research methods in criminal justice.

- 521 Advanced Topics in Criminal Justice Research Methods 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 520. Exploration of specialized topics in research methodology; topics may include qualitative methods, GIS, ethnography, and survey design.
- 522 Foundations of Quantitative Methods 3** Application of foundational quantitative methods utilized in the field of Criminal Justice and Criminology.
- 523 Intermediate Quantitative Methods 3** Course Prerequisite: CRM J 522. Intermediate-level quantitative methods including logistic regression, factor analysis, propensity scoring and model building.
- 524 Advanced Topics in Quantitative Methods 3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: CRM J 523. Advanced quantitative methods used in criminal justice, including time series, HLM, multi-level modeling, spatial analysis, and repeated measures analysis.
- 530 Criminal Justice: Process and Institutions 3** Processes of criminal justice in the context of the social, political, and economic environments.
- 531 Drugs, Alcohol, and Crime 3** Examination of the research and theory surrounding the relationship between alcohol, drugs, crime, and the criminal justice system.
- 540 Seminar in Evaluation Research 3** Interrelationship of ideology, data, policy development, and policy implementation in public policy analysis. (Cross-listed course offered as CRM J 540, POL S 541).
- 541 Seminar in Corrections 3** Current issues related to the control, management, and sanctioning of criminal offenders.
- 542 Community Corrections 3** Examines correctional processes in a community setting, including probation, parole, and innovative community-based strategies for dealing with the offender.
- 555 Seminar in Criminological Theory 3** Individual, situational and ecological correlates of criminal behavior; data sources and empirical research.
- 560 Prosecution and Adjudication 3** The function of courts and the behavior of prosecutors, defense attorneys and judges within the criminal justice system.
- 570 The Police and Society 3** Community and selected social institutional factors as related to their influence on police systems.
- 572 Seminar in Comparative Policing 3** Study of the history, organization, and policies of policing systems in selected countries and of transnational policing.
- 580 Gender and Justice 3** Criminal justice system's treatment of women offenders, victims, and professionals.
- 590 PRACTICUM V 1-6** May be repeated for credit; cumulative maximum 6 hours. S, F Grading.
- 591 Seminar in the Administration of Criminal Justice 3** May be repeated for credit; cumulative maximum 6 hours. Current issues, problems, and critical concerns within the field of administration of criminal justice.
- 592 Proseminar in Administration, Justice, and Applied Policy Studies 3** May be repeated for credit; cumulative maximum 6 hours. Same as POL S 542.
- 593 Special Topics in Criminological Theory 3** May be repeated for credit; cumulative maximum 6 hours. Intense examination of a contemporary criminological theory, school, or paradigm.
- 594 Special Topics in Comparative Criminology and Criminal Justice 3** May be repeated for credit; cumulative maximum 6 hours. Intensive study of specific topics in comparative criminal justice or criminology.
- 595 Advanced Topics in Criminal Justice Institutions and Processes 3** May be repeated for credit; cumulative maximum 6 hours. In-depth study of issues associated with criminal justice institutions and processes.
- 596 Special Topics: Criminal Justice and Public Health 3** May be repeated for credit; cumulative maximum 6 hours. Examination of public health ramifications of criminal justice policy and practice; public health approaches to violence and substance abuse prevention.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- 501 The Scope of Political Science 3** Historical development and present status of the discipline; contemporary issues and future trends.
- 502 Seminar in Normative Theory 3** Elements of normative theory developments; examination of bases of controversies and approaches in the modern literature using historical sources.
- 503 Research Methods in Political Science 3** Social science research design topics, measurement, sampling, data sources, experimental and quasi-experimental designs, field and historical designs, content analytic designs.
- 504 Quantitative Methods in Political Science 3** Applied statistical skills, enabling understanding of substantive political and social questions.

- 505 Comparative Criminal Justice 3** Comparative study of crime laws and criminal justice systems in selected foreign countries. (Cross-listed course offered as CRM J 505, POL S 505).
- 510 Seminar on American Institutions and Processes 3** Seminar required of all graduate students using this field as a major or a minor; it is a prerequisite of all other graduate seminars in the field.
- 511 Seminar in American Political Thought 3** May be repeated for credit; cumulative maximum 6 hours. The genesis and development of political thought in the United States.
- 512 Seminar in American Institutions 3** May be repeated for credit; cumulative maximum 6 hours. Origin, development, and contemporary issues in political organization and structure in the United States.
- 513 Seminar in American Political Behavior 3** May be repeated for credit; cumulative maximum 6 hours. Theoretical approaches to, and empirical analysis of, mass political behavior in the US.
- 514 Seminar in Public Policy 3** Examination of central questions in public policy including the nature of public policy, policy analysis, and government intervention in society.
- 516 Seminar on Law, Courts, and Judicial Politics 3** Seminar on law, courts, and judicial politics.
- 530 American Foreign Policy: Theories and Applications 3** Theories of international politics applied to American foreign policy.
- 531 Seminar in International Security 3** International security and arms control politics, negotiations, agreements.
- 532 Seminar in International Political Economy 3** Institutions, politics, and decision-making processes in managing international economic relations.
- 533 Topics in Political Psychology 3** May be repeated for credit; cumulative maximum 6 hours. Psychological influences on political decision making, bargaining, conflict and conflict resolution options.
- 534 Seminar in Comparative Politics 3**
- 536 Special Topics in Comparative Politics 3** May be repeated for credit; cumulative maximum 6 hours. Advanced issues seminar in international and comparative politics.
- 537 Concepts and Methods in Comparative Politics 3** May be repeated for credit; cumulative maximum 6 hours. Selected concepts (state, political participation), and methods (cross-national analysis, case study approaches) in comparative politics.
- 538 International Development and Human Resources 3** History of and recent changes in international development emphasizing anthropological perspectives. (Cross-listed course offered as ANTH 519, POL S 538, SOC 519).
- 539 The Political Science Profession 1** Methods, problems, and purposes of teaching, research, and vocation in political science.
- 540 Proseminar in Public Administration 3** Proseminar over viewing basic theories of administrative organization, relationships, and behavior.
- 541 Seminar in Evaluation Research 3** Interrelationship of ideology, data, policy development, and policy implementation in public policy analysis. (Cross-listed course offered as CRM J 540, POL S 541).
- 542 Proseminar in Administration, Justice, and Applied Policy Studies 3** May be repeated for credit; cumulative maximum 6 hours. Analytical perspectives and theoretical issues.
- 543 Topics in Public Administration and Policy 3** May be repeated for credit; cumulative maximum 6 hours. Examination of the literature on the politics of the American public policy process.
- 544 The Politics of Policy Process 3** American political process; policy making under the constraints of a democratic system; relationship to the (non) achievement of the public interest.
- 590 Policy Studio Course I 2** Course Prerequisite: By instructor permission. Public policy training for graduate students in the science and engineering fields through the NSF-IGERT program.
- 591 Policy Studio Course II 2** Course Prerequisite: By instructor permission. Public policy training for graduate students in the science and engineering fields through the NSF-IGERT program.
- 592 Policy Studio Course III 2** Course Prerequisite: By instructor permission. Public policy training for graduate students in the science and engineering fields through the NSF-IGERT program.
- 597 Graduate Internship V 2-12** May be repeated for credit; cumulative maximum 12 hours. On/off campus internship in federal, state, or local government institutions; nonprofit or public organizations; written assignments and readings required.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

800 Doctoral Research, Dissertation, and/or Examination V 1-18

May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Health Policy and Administration

Degree offered: Master of Health Policy and Administration

Faculty working with graduate students: 13

Graduate students: 34

Graduate students receiving assistantships or scholarships: 8%

Program offered: Spokane

Tests required: GMAT, GRE (Combined), IELTS, MELAB, TOEFL, TOEFLI

Deadline: Fall: Rolling
Spring: Rolling

Requirements

A student must earn a 3.0 grade point average for all course work. No work of C grade or less may be dropped from a program, nor can a course be repeated for a higher grade if the final grade is C or higher. Any course listed on the program in which a grade of C-, D, or F is earned must be repeated. Any graduate student who fails to maintain a cumulative grade point average of 3.00 or higher for all course work subsequent to admission to the Graduate School will be dropped from the University. Credits with a grade of B or higher that are awarded after a bachelor's degree and are earned in other accredited graduate schools may be transferred and applied toward a student's graduate degree program if they are also appropriate to HPA. The number of such credit hours is limited to no more than half of the total graded course credits required by the program. None of this credit may be applied toward another advanced degree.

Program Description

With CAHME accreditation, renowned faculty and a strong, distinguished curriculum, the HPA program offers students outstanding preparation for health policy and health management careers. What's more, our location in Spokane—a large tertiary medical center—fosters valuable connections with the medical community. The HPA Program believes that the health status of citizens is determined heavily by community and environmental characteristics, and individual behavior, in addition to the health care system. Thus, we think health care leaders and organizations should be closely linked to the community setting in which they work. The program provides significant opportunities for students to participate in community activities while learning how to undertake community health improvement. The faculty have a close working relationship with public officials and policy makers at the state level who work with health care reform issues. Students and faculty have the opportunity to work on policy projects providing rich and broadening experiences in health policy and management.

Degree Description

The core courses provide basic understanding and experience in managing health care systems in the context of enhancing community health status. A multidisciplinary systems perspective in many courses helps students develop knowledge and skills in communication, ethics, interpersonal relations, team building, management, and delivery of cost-effective health care. The learning environment is both rigorous and flexible. Students are encouraged to design individualized programs suitable to a variety of career goals and future employment opportunities. Practical and individualized experiences, through internships, fellowships, research assistantships, and special projects build students' skills and values in varied administrative settings.

Training and Professional Development Opportunities

HPA Seminar Series, ACHE Congress, AUPHA Full Graduate Membership Status, Academy Health, American Public Health Association, LEan Six Sigma Online Professional Development Certificates.

Post-Graduate Employment Opportunities

Post Graduate Fellowships, Hospitals or Health Systems, Physician Practices, Military or VA, Foundations, Long-term Care Facilities, Home Health Care Facilities, Consulting Firms, Insurance/HMOs, Doctoral Programs.

Post-Graduate Career Placements

Post Graduate Fellowships, Hospitals or Health Systems, Physician Practices, Military or VA, Foundations, Long-term Care Facilities, Home Health Care Facilities, Consulting Firms, Insurance/HMOs, Doctoral Programs.

Health Policy And Administration

HPA

- 500 Introduction to the Health Care System** 3 Orientation to history and organization of the health care system.
- 501 Health Care Policy and Politics** 3 History, methods, results and evaluation of health-care-related policy and politics.
- 502 Law and Ethics of Health Management** 3 Private health law and ethics, including professional liability, relationship of physician and patient, malpractice reform, health institutions, and health access.
- 503 Government Regulation of Health Services** 3 Public law regulation; health care quality, personhood and individual autonomy, life/death decisions, antitrust, health care financing and cost control.
- 509 Health Care Economics** 3 The economics of allocating, financing and delivering health care services.
- 510 Health Care Cost Accounting** 3 Basic cost-accounting concepts, principles, and applications in the health care setting.
- 511 Health Care Finance** 3 Aspects of health care financial management fundamentals and managerial accounting for strategic financial management.
- 512 Health Management Decision Science** 3 Application of decision science technology to risk-analysis problems in healthcare for both investor-owned and non-profit entities.
- 515 Health Care Management** 3 Introduction to the knowledge, skills, and values associated with the practice of health management.
- 516 Health Quality Management** 3 Overview of the total field of health quality, including strategic quality management programs, quality assurance, quality control, and design.
- 517 Health Care and Human Resources Management** 3 Managing human resources and health professionals in diverse health care environments such as hospitals, clinics, home health care agencies and pharmaceutical firms.
- 519 Biostatistics and Epidemiology for the Health Sciences** 3 Application of quantitative methods to problems in the health sciences; statistical analysis software.
- 520 Research and Evaluation Methods** 3 Basic research and evaluation methods for health care professionals.
- 530 Health Care Information Systems** 3 Key attributes of health care information systems and their evolution in health care environment.
- 570 Marketing for Health Care Organizations** 3 Basic marketing concepts, principles, and issues related to marketing public and private health care.
- 572 Health Care Ethics** 3 Ethical issues affecting health care institutions, professionals and consumers.
- 573 Comparative International Health Care** 3 Analysis of key attributes of health care in selected countries and comparisons with the US health care system.
- 574 Rural Health Care in America** 3 The unique characteristics, professional opportunities, problems and reform alternatives in rural health care.

- 579 Mental Health Policy and Law** 3 Professions regulation, negligence, consent, privacy; civil commitment, treatment rights, guardianship, trial competency, insanity defense, sex offenders, execution capacity, entitlements, discrimination.
- 580 Disability and Aging Policy** 3 Policy aspects of disability, aging and chronic illness; including work disability, health and long term care, rationing, gender and class.
- 590 Strategic Management and Marketing** 3 Key components and processes in strategic planning.
- 597 Internship** V 1-5 May be repeated for credit; cumulative maximum 5 hours. Student experience in professional work settings.
- 599 Special Topics in Health Policy and Administration** V 1-3 May be repeated for credit; cumulative maximum 9 hours.
- 600 Special Projects or Independent Study** V 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination** V 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination** V 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.

Health-Assistive Smart Environment Design – Cert in Hlth Asst Smrt Env Des

Degree offered: Graduate Certificate in Health-Assistive Smart Environment Design

Faculty working with graduate students: 5

Graduate students: 12

Graduate students receiving assistantships or scholarships: 100%

Requirements

Please see the program/department for more information.

Faculty

Diane Cook, Lawrence Holder, Sankar Jayaram, Maureen Schmitter-Edgecombe and Behrooz Shirazi.

Civil Engineering

C E

- 501 Advanced Topics in Transportation Engineering V** 2-4 May be repeated for credit; cumulative maximum 9 hours. Special topics course in transportation engineering.
- 502 Applied Meteorology 3** Atmospheric physical behavior across spatial scales linking concepts of meteorological phenomena to engineering design principles. Credit not granted for both CE 402 and CE 502.
- 503 Air Quality Management 3** Air pollution from the perspective of an environmental manager; regulatory framework, management strategies, monitoring, modeling tools, and control technologies.
- 504 Sustainability Engineering I 3** Green building and sustainable development topics including low impact development (LID) storm water design and environmental life cycle assessment (LCA).
- 505 Sustainability: Green Engineering 3** Focus on the LEED green building rating system with topics on sustainable site selection, alternative transportation, heat island effect, light pollution, water and energy efficiency/use, regional and global climate/air issues, use/reuse of many material and resources, and indoor environmental quality.
- 506 Theory and Measurement of Turbulent Fluxes 3** Fundamental concepts of turbulence and turbulent fluxes in the atmospheric surface layer, the statistical description of turbulence and turbulent fluxes, eddy covariance systems, and post-processed flux data.
- 507 Sustainability: Life Cycle Assessment 3** Principles of life cycle assessment (LCA), environmental impacts categories, LCA system models, and methods for life cycle inventory.
- 509 Numerical Modeling of Geomaterials 3** Modeling of the response of geomaterials to changes in imposed stresses or strains under both static and dynamic conditions.
- 510 Advanced Geomaterial Characterization 3** Advanced mechanics of geomaterials; compressibility, concept of stress and strain; shear strength, stress/strain and time-dependent behavior; dynamic properties.
- 511 Advanced Topics in Geotechnical Engineering V** 2-4 May be repeated for credit; cumulative maximum 9 hours. Soil dynamics, theoretical soil mechanics, numerical methods in soil mechanics, and geohydrology, engineering geology, cold regions geoengineering. Required preparation must include CE 317.
- 512 Dynamics of Structures 3** Equations of motion, free vibration, damping mechanisms, harmonic, impulse, and seismic loading; shock and seismic response spectra, time and frequency domain analysis, modal analysis, structural dynamics in building codes.
- 514 Advanced Mechanics of Materials 3** Elastic stress-strain relations, shear center, unsymmetrical bending, curved beams, elastic stability, elastically supported beams, energy methods, thin plates, shells.
- 515 Environmental Measurements 3** (1-6) Theory and laboratory measurement techniques used in analyzing environmental quality parameters. Credit not granted for both CE 415 and CE 515. Required preparation must include CE 341.
- 517 Mechanics of Sediment Transport 3** Cohesive and non-cohesive sediments; initiation of sediment motion; sediment transport; suspended and bed load entrainment; models of sediment transport for alluvial and gravel bed streams, sediment-flow interaction; river morphology and ecological restoration.
- 518 Hazardous Waste Engineering V** 3-4 Hazardous waste properties, chemodynamics, and health effects; introduction to risk assessment and hazardous waste remediation. Credit not granted for both CE 418 and CE 518.
- 519 Hazardous Waste Treatment 3** Principles of operation and application of processes in design of technologies used in hazardous waste treatment and remediation. Credit not granted for both CE 419 and CE 519.
- 524 Geotechnical Earthquake Engineering 3** Faulting and seismicity; site response analysis; probabilistic seismic hazard assessment; influence of soil on ground shaking; response spectra; soil liquefaction; seismic earth pressures; seismic slope stability; earthquake resistant design.
- 525 Soil and Site Improvement 3** Compaction theory and methods; deep densification of soils; advanced consolidation theory, preloading, vertical drains, chemical stabilization, grouting; design with geosynthetics. Credit not granted for both CE 425 and CE 525. Required preparation must include CE 317.
- 527 Engineering Properties of Soils 3** Physical properties, compressibility and consolidation, shear strength, compaction, saturated and unsaturated soils, laboratory and field methods of measurement, relations of physical and engineering properties, introduction to critical-state soil mechanics. Required preparation must include CE 317.
- 530 Advanced Design of Steel Structures 3** Plate girder design; local and global buckling; plastic collapse analysis; shear and Moment-resisting connections; eccentrically-loaded connections. Required preparation must include CE 431.
- 531 Probability and Statistical Models in Engineering 3** Engineering applications of probability and statistics; Monte Carlo simulation; model estimation and testing; probabilistic characterizations of loads and material properties; risk and reliability analyses.
- 532 Finite Elements 3** Theory of finite elements; applications to general engineering systems considered as assemblages of discrete elements. (Cross-listed course offered as CE 532, ME 532).

- 533 Advanced Reinforced Concrete Design 3** Composite design; slab design; limit state design; footings; retaining walls; deep beams; brackets and corbels; torsion; seismic design; shear walls. Required preparation must include CE 433.
- 534 Prestressed Concrete and Reinforced Masonry Design 3** Behavior, analysis, and design of pretensioned and post-tensioned prestressed concrete structures; behavior and design of reinforced masonry structures. Credit not granted for both CE 434 and CE 534.
- 535 Advanced Finite Elements 3** Plate and shell analysis; nonlinear solution methods for finite strain/rotation and nonlinear materials.
- 536 Nondestructive Testing of Structural Materials 3** Principles of nondestructive testing applied to wood-based materials, steel, concrete, and masonry. (Cross-listed course offered as CE 536, MSE 549).
- 537 Advanced Topics in Structural Engineering 3** May be repeated for credit; cumulative maximum 9 hours. Elastic stability, plates and shells, other relevant topics.
- 538 Earthquake Engineering 3** Seismology, size of earthquakes, seismic ground motion, seismic risk, behavior of structures subjected to earthquake loading seismic response spectra, seismic design codes, lateral force-resisting systems, detailing for inelastic seismic response.
- 539 Advanced Design of Timber Structures 3** Engineering properties of wood materials; theory and design of wood composites, connections and load-sharing systems; performance criteria and durability. Required preparation must include CE 436.
- 540 Instrumental Analysis of Environmental Contaminants 3** (1-6) Course Prerequisite: CE 515. Theory and methods of analysis of water and water suspensions for contaminants using electrometric, spectrophotometric, and chromatographic techniques.
- 541 Physicochemical Water and Wastewater Treatment 3** Principles of physical and chemical operations used in water and wastewater treatment, including chemical reactor theory, sedimentation, filtration, precipitation, mass transfer, coagulation/flocculation, disinfection, adsorption and ion exchange. Recommended preparation: CE 442.
- 542 Biochemical Wastewater Treatment 3** Principles of biochemical operations used in wastewater treatment including biochemical energetics, kinetics, activated sludge and fixed film reactors, nutrient removal, and sludge handling and treatment.
- 543 Advanced Topics in Environmental Engineering Practice V** 1-4 May be repeated for credit; cumulative maximum 9 hours. Analysis and evaluation of air/water/soil pollution problems, new measurement methods, hazardous waste treatment, global climate change, and water/wastewater treatments.
- 550 Hydroclimatology 3** Water and energy budgets as they relate to climate, dynamics; and remote sensing, statistical, and modeling techniques for hydroclimatology.
- 551 Open Channel Flow 3** Steady, non-uniform flow; controls and transitions in fixed-bed channels. Credit not granted for both CE 451 and CE 551.
- 552 Advanced Topics in Hydraulic Engineering V** 1-3 May be repeated for credit; cumulative maximum 9 hours. Cavitation, air entrainment, hydraulic machinery, similitude, mixing in rivers and estuaries, hydraulic design. Required preparation must include CE 351.
- 555 Natural Treatment Systems 3** Principles and design procedures of natural systems for wastewater treatment for agricultural and non-agricultural applications. (Cross-listed course offered as CE 555, BSYSE 555).
- 560 Advanced Hydrology 3** Components of the hydrologic cycle; conceptual models; watershed characteristics; probability/statistics in data analysis; hydrographs; computer models; and design applications. Credit not granted for both CE 460 and CE 560.
- 567 Properties of Highway Pavement Materials 3** Physical and mechanical properties of asphalt and Portland cement concrete materials; design of asphalt concrete mixes; introduction to viscoelastic theory; characterization methods, emphasizing fatigue, rutting, and thermal cracking; modification and upgrading techniques. Three 1-hr lect a wk and variable number of lab hrs for demonstration.
- 572 Advanced Pavement Design and Analysis 3** Design of new and rehabilitated asphalt and Portland Cement concrete pavements; mechanistic-empirical design procedures, performance models; deflection-based structural analysis, overlay design, environmental effect; long-term pavement performance (LTPP), and introduction to research topics in pavement engineering. Required preparation must include CE 473.
- 580 Graduate Seminar 1** May be repeated for credit; cumulative maximum 2 hours. Lectures and reports on current developments in research and practice.
- 583 Aquatic Chemistry 3** Chemical principles as applied to natural environmental system, water supply and pollution and control engineering. (Cross-listed course offered as CE 583, BSYSE 560).
- 584 Environmental Microbiology 3** Provides a fundamental understanding of microbiology to engineering and environmental science students; cell structure and metabolism; microbial ecology and diversity.
- 585 Aquatic System Restoration 3** Study of natural, damaged and constructed ecosystems with emphasis on water quality protection and restoration of lakes, rivers, streams and wetlands. (Cross-listed course offered as CE 585, BSYSE 554, ENVR SCI 585). Required preparation must include CHEM 345; MBIOS 101. Required preparation must include CHEM 345; MBIOS 101.
- 586 Bioremediation of Hazardous Waste 3** Applications of bioremediations to in situ subsurface treatment of hazardous waste; subsurface microbial degradation as related to microbial ecology.
- 588 Atmospheric Turbulence and Air Pollution Modeling 3** Physical aspects of atmospheric turbulence, theoretical developments in atmospheric diffusion, and applied computer modeling with regulatory and research models.
- 589 Atmospheric Chemical and Physical Processes 3** Processes of removal of pollutants from the atmosphere; radical chain reactions, particle formation, model calculations.

- 590 Spectroscopy and Radiative Transfer of the Atmosphere 3** Concepts of radiative transfer and molecular spectra in the troposphere and stratosphere with applications to trace gas measurements.
- 591 Aerosol Dynamics and Chemistry 3** Chemical and physical properties of atmospheric aerosols; sources, sinks, and transformation processes.
- 593 Polymer Materials and Engineering 3** Preparation and structure-property relationship of polymer materials with emphasis on fracture mechanics and toughening. (Cross-listed course offered as CE 593, MSE 543). Required preparation must include MSE 402. Required preparation must include MSE 402.
- 594 Natural Fibers 3** Structural aspects and properties of natural fibers including anatomy, ultrastructure, and chemistry. (Cross-listed course offered as CE 594, MSE 544).
- 595 Polymer and Composite Processing 3** Polymer and composite processing from fundamental principles to practical applications. (Cross-listed course offered as CE 595, MSE 545).
- 596 Engineered Wood Composites 3** Theory and practice of wood composite materials, manufacture and development. (Cross-listed course offered as CE 596, MSE 546).
- 597 Polymers and Surfaces for Adhesion 3** Physical chemistry of polymers and surfaces needed to understand interface morphology, adhesion mechanisms and bond performance. (Cross-listed course offered as CE 597, MSE 547). Required preparation must include MSE 402, or 404. Required preparation must include MSE 402 or 404.
- 598 Natural Fiber Polymer Composites 3** Fundamentals, development and application of composite materials produced from polymers reinforced with natural fibers and wood as major components. (Cross-listed course offered as CE 598, MSE 548).
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Civil Engineering**
- CPT S**
- 500 Proseminar 1** Faculty research interests, departmental computer systems, computer science research, report preparation.
- 516 Algorithmics 3** Discrete structures, automata, formal languages, recursive functions, algorithms, and computability.
- 527 Computer Security 3** Computer security concepts, models and mechanism; encryption technology, formal models, policy and ethical implications. Credit not granted for both CPT S 427 and CPT S 527.
- 530 Numerical Analysis 3** Fundamentals of numerical computation; finding zeroes of functions, approximation and interpolation; numerical integration (quadrature); numerical solution of ordinary differential equations. (Cross-listed course offered as MATH 448, CPT S 430, CPT S 530). Required preparation must include differential equations and a programming course.
- 531 Advanced Matrix Computations 3** Advanced topics in the solution of linear systems and eigenvalue problems, including parallel matrix computations. (Cross-listed course offered as MATH 544, CPT S 531). Required preparation must include numerical analysis. Required preparation must include numerical analysis.
- 534 Neural Network Design and Application 3** Hands-on experience with neural network modeling of nonlinear phenomena; application to classification, forecasting, identification and control. Credit not granted for both CPT S 434 and CPT S 534.
- 538 Scientific Visualization 3** Data taxonomy; sampling; plotting; using and extending a visualization package; designing visualizations; domain-specific techniques.
- 540 Artificial Intelligence 3** An introduction to the field of artificial intelligence including heuristic search, knowledge representation, deduction, uncertainty reasoning, learning, and symbolic programming languages. Credit not granted for both CPT S 440 and CPT S 540.
- 542 Computer Graphics 3** Raster operations; transformations and viewing; geometric modeling; visibility and shading; color. Credit not granted for both CPT S 442 and CPT S 542.
- 543 Human-Computer Interaction 3** Concepts and methodologies of engineering, social and behavioral sciences to address ergonomic, cognitive, social and cultural factors in the design and evaluation of human-computer systems. Credit not granted for both CPT S 443 and CPT S 543.
- 548 Advanced Computer Graphics 3** Solid modeling, visual realism, light and color models, advanced surface generation techniques.

- 550 Parallel Computation 3** Parallel machine models, principles for the design of parallel algorithms, interconnection networks, systolic arrays, computational aspects to VLSI. Required preparation must include differential equations and a programming course.
- 553 Graph Theory 3** Graphs and their applications, directed graphs, trees, networks, Eulerian and Hamiltonian paths, matrix representations, construction of algorithms. (Cross-listed course offered as MATH 453, CPT S 453). Required preparation must include linear algebra. Required preparation must include linear algebra.
- 555 Computer Communication Networks 3** Packet switching networks; multi-access and local-area networks; delay models in data networks; routing and flow control. (Cross-listed course offered as E E 555, CPT S 555).
- 557 Advanced Computer Networks 3** ATM networks, optical WDM networks, and wireless/mobile networks; access, transport, and routing protocols.
- 560 Operating Systems 3** Structure of multiprogramming and multiprocessing; efficient allocation of systems resources; design implementation and performance measurement.
- 561 Computer Architecture 3** Parallel and distributed processors; multiprocessors; interconnection topologies; language-directed architecture; special-purpose architecture.
- 562 Fault Tolerant Computer Systems 3** Fault tolerance aspects involved in design and evaluation of systems; methods of detection and recovery; multicast, middleware, and re-configuration. (Cross-listed course offered as CPT S 562, E E 562).
- 564 Distributed Systems Concepts and Programming 3** Concepts of distributed systems; naming, security, networking, replication, synchronization, quality of service; programming middleware. Credit not granted for both CPT S 464 and CPT S 564.
- 566 Embedded Systems 3 (2-3)** The design and development of real-time and dedicated software systems with an introduction to sensors and actuators. Credit not granted for both CPT S 466 and CPT S 566.
- 570 Machine Learning 3** Introduction to building computer systems that learn from their experience; classification and regression problems; unsupervised and reinforcement learning.
- 571 Computational Genomics 3** Fundamental algorithms, techniques and applications. Credit not granted for both CPT S 471 and CPT S 571.
- 572 Numerical Methods in Computational Biology 3** Computational methods for solving scientific problems related to information processing in biological systems at the molecular and cellular levels.
- 573 Bioinformatics Software Development 3** Provides programming skills needed to address current computational problems in bioinformatics; emphasis on mathematical development and software design.
- 580 Advanced Topics in Computer Science 3** May be repeated for credit.
- 595 Directed Study in Computer Science V 1 (0-3) to 3 (0-9)** May be repeated for credit; cumulative maximum 6 hours. Current topics in computer science.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- Civil Engineering**
- PSYCH**
- 502 Research Design V 1-3** May be repeated for credit; cumulative maximum 16 hours. Course Prerequisite: Ph.D. student in Psychology. Research design, equipment, data collection, data analysis, and report writing.
- 504 History of Psychology: Theoretical and Scientific Foundations 3** Course Prerequisite: Ph.D. student in Psychology. Roots of scientific explanation in psychology traced through various philosophical schools and psychological movements.
- 505 Teaching Introductory Psychology V 1-3** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Ph.D. student in Psychology. Problems and techniques related to teaching introductory psychology.
- 506 Current Research in Psychology 1** May be repeated for credit; cumulative maximum 2 hours. Course Prerequisite: Ph.D. student in Psychology. Current research being conducted by psychology faculty and members of associated departments.
- 508 Special Topics in Psychology V 1-3** May be repeated for credit.
- 510 Introduction to Online Instruction 1** Course Prerequisite: Ph.D. student in Psychology. Instruction in teaching online courses addressing issues faced by instructors and students; students are mentored while teaching online.

- 511 Analysis of Variance and Experimental Design 3** Course
Prerequisite: Ph.D. student in Psychology. Parametric, nonparametric, repeated-measures, and multivariate ANOVA; planned comparisons; confidence intervals and power analysis; experimental design and variants.
- 512 Correlation, Regression, and Quasi-Experimental Design 3** Course Prerequisite: Ph.D. student in Psychology. Simple and multiple correlation and regression; time-series analysis; factor analysis; field research and quasi-experimental design.
- 513 Seminar in Quantitative Methods and Research Design 3**
May be repeated for credit. Course Prerequisite: PSYCH 512. Advanced topics in specialized quantitative procedures and in design of research in psychology.
- 514 Psychometrics 3** Course Prerequisite: PSYCH 512. Scientific construction of behavioral assessment instruments, including validation and reliability; types of scales and responses; statistical scaling; test theory issues.
- 515 Multilevel and Synthesized Data 3** Course Prerequisite: PSYCH 512. Structural equation modeling, hierarchical linear modeling and meta-analysis and the software used to conduct these analyses.
- 516 Applied Structural Equation Modeling with Current Software 3** Course Prerequisite: PSYCH 514; PSYCH 515. Confirmatory factor analysis, path analysis, structural regression analysis, multilevel analysis and latent growth analysis with current software.
- 520 Empirical Approaches to Psychotherapy 3** Course Prerequisite: PSYCH 533. Major therapy systems, research on process and outcome of therapy.
- 530 Professional, Ethical, and Legal Issues 3** Course Prerequisite: Ph.D. student in Psychology. Application of professional, ethical, and legal issues in clinical psychology to such topics as confidentiality, dual-relationships, research, assessment, and intervention.
- 533 Adult Psychopathology 3** Course Prerequisite: Ph.D. student in Psychology. Theoretical and empirical approaches to diagnosis, etiology and treatment of mental disorders.
- 534 Clinical Psychopharmacology 3** Course Prerequisite: PSYCH 533 or COUN PSY 517. Classification, clinical application, and mechanisms of psychotherapeutic drugs used in the treatment of mental disorders.
- 535 Personality Assessment and Diagnosis 3** Course Prerequisite: Ph.D. student in Psychology. Diagnostic interviewing, conceptualization of clinical problems, case presentations, and treatment planning.
- 536 Measurement Theory and Personality Assessment 3** Course Prerequisite: By interview only. Psychometric theory, theories of personality, objective and projective methods of assessing personality, development of testing and interpretive skills.
- 537 Psychology Clinic Assessment Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: PSYCH 539. Supervised practice in psychological assessment in the Psychology Clinic.
- 538 Child Therapy Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with children and families.
- 539 Intellectual and Neuropsychological Assessment 3** Course Prerequisite: Ph.D. student in Psychology. Psychometric theory, theories of intelligence, methods of appraising intelligence in children and adults, and development of testing and interpretive skills.
- 542 Child and Adolescent Psychopathology 3** Theoretical and empirical approaches to etiology and diagnosis of mental disorders in children.
- 543 Child Clinical Psychology: Empirical Approaches to Assessment and Therapy 3** Course Prerequisite: Ph.D. student in Psychology. Research on child assessment and therapy.
- 544 Medical Psychology: Psychological and Pharmacological Interventions 3** Course Prerequisite: Ph.D. student in Psychology. Psychological factors and their influence upon the causes and/or course of medical illnesses as well as relevant clinical interventions.
- 545 Psychology Clinic Assessment and Psychotherapy Practicum 3 (0-9)** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology with adults in the Psychology Clinic.
- 546 Counseling Service Practicum V 1-3** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Counseling Service.
- 547 Medical Psychology Practicum 3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at the WSU Health and Wellness Service.
- 548 Clinical Externship V 1-3** May be repeated for credit; cumulative maximum 18 hours. Course Prerequisite: Ph.D. student in Psychology. Supervised practice in the clinical application of psychology at approved hospitals and medical practices.
- 550 Social Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Attitude structure, function, and change; social cognition and motivation, and attributions.
- 552 Diversity Issues in Psychology 3** Course Prerequisite: Ph.D. student in Psychology. Research, theories, and controversies regarding the role of human diversity in psychotherapy, psychological assessment, and clinical research.
- 574 Clinical and Experimental Biopsychology 3** Course Prerequisite: Ph.D. student in Psychology. Neuroanatomical, neurochemical, and other biological cases of human and animal behavior.
- 575 Foundations of Neuropsychology 3** Course Prerequisite: Ph.D. student in Psychology. Foundations in brain/behavior relationships and neuropathological syndromes; preparation for advanced training in neuropsychological assessment.
- 577 Behavioral Pharmacology 3** Survey of drugs which affect brain function with emphasis on animal models and clinical applications. Recommended preparation: PSYCH 574 or NEUROSCI 520.
- 584 Sensory Bases of Behavior 3** Sensory and physiological aspects of vision, audition, and other senses.

- 591 Principles of Learning 3** Principles of learning from a behavioral perspective using the experimental analysis of behavior. Credit not granted for both PSYCH 491 and 591. Recommended preparation: PSYCH 105.
- 592 Cognition and Affective Basis of Behavior 3** Course Pre-requisite: Ph.D. student in Psychology. Experimental approaches to human information processing, memory, and cognition.
- 595 Clinical Internship in Psychology V 2-16** May be repeated for credit; cumulative maximum 16 hours. Course Pre-requisite: Ph.D. student in Psychology. Clinical training in an internship approved by American Psychological Association or by WSU.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study and/or Examination V 1-18** May be repeated for credit. Course Pre-requisite: Ph.D. student in Psychology. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Course Prerequisite: Ph.D. student in Psychology. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Higher Education – Community College Leadership

Degree offered: Doctor of Education (Community College Leadership)

Faculty working with graduate students: 8

Graduate students: 7

Program offered: Pullman, Spokane, Tri-Cities, Vancouver

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: July 1

Program Description

The graduate degree program in Higher Education Administration

includes preparation at the master's and doctoral levels for students who plan to achieve positions of leadership in higher education administration and related fields or who wish to become faculty members. The Ph.D. in education offers specializations in higher education administration or student affairs. The Higher Education Administration Program offers five graduate degrees: Master of Arts (M.A.), specializing in higher education administration; Master of Education (Ed.M.), specializing in higher education administration; Doctor of Education (Ed.D.), specializing in community; college leadership; Doctor of Education (Ed.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in student affairs; As a graduate student, the College of Education's undergraduate leadership studies minor (with 100 to 150 undergraduate students) provides you with both research and teaching opportunities. In addition, other partnerships with university student affairs units provide further opportunities tied to the students' educational pursuits. Cleveland Hall is home to the George B. Brain Education Library, providing you with access to their main collection of education-related materials, a separate children's literature section, a media center, and a workroom.

Degree Description

The higher education program is dedicated to meeting students' needs as current and future leaders and faculty in colleges, universities, or in athletic programs throughout the country. The program provides a balance and integration of research, theory, policy, and practical experience. Students examine the range of historical, social, legal, political, economic, and ethical issues that impact the practice and administration of higher education. The Ed.D. is a professional degree awarded by the Department designed to prepare students whose primary interest is in the practice of education. Recognized as a professional degree, it is typically chosen by students who will occupy positions of leadership and applied specialties in public or private educational organizations or related fields. The Ed.D. with emphasis in Community College Leadership is designed to appeal to students who currently work in community colleges, or are interested in moving into administrative positions within the community college setting. The degree program has an emphasis on preparing people to move into positions of increasing leadership and responsibility in the community college sector of higher education

Post-Graduate Employment Opportunities

Faculty in higher education and student affairs programs; student affairs administrators; policy analysts; government relations; general university administrators; athletic administrators.

Post-Graduate Career Placements

Faculty

Alton Jamison, Milton Lang, Xyanthe Neider, Paul Pitre, Jason Sievers, Patricia Sturko, Kelly Ward and Christian Wuthrich.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.

- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction: application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.

- 521 Topics in Educational Psychology V** 1-4 May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V** 2-3 May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V** 2-4 May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDRES**
- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.

570 Action Research 3 Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.

571 Doctoral Dissertation Preparation 3 Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

Higher Education

Degree offered: Doctor of Education (Higher Ed Administration)

Faculty working with graduate students: 8

Graduate students: 5

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: September 1

Program Description

The graduate degree program in Higher Education Administration includes preparation at the master's and doctoral levels for students who plan to achieve positions of leadership in higher education administration and related fields or who wish to become faculty members. The Ph.D. in education offers specializations in higher education administration or student affairs. The Higher Education Administration Program offers five graduate degrees: Master of Arts (M.A.), specializing in higher education administration; Master of Education (Ed.M.), specializing in higher education administration; Doctor of Education (Ed.D.), specializing in community; college leadership; Doctor of Education (Ed.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in student affairs; As a graduate student, the College of Education's undergraduate leadership studies minor (with 100 to 150 undergraduate students) provides you with both research and teaching opportunities. In addition, other partnerships with university student affairs units provide further opportunities tied to the students' educational pursuits. Cleveland Hall is home to the George B. Brain Education Library, providing you with access to their main collection of education-related materials, a separate children's literature section, a media center, and a workroom.

Degree Description

The higher education program is dedicated to meeting students' needs as current and future leaders and faculty in colleges, universities, or in athletic programs throughout the country. The program provides a balance and integration of research, theory, policy, and practical experience. Students examine the range of historical, social, legal, political, economic, and ethical issues that impact the practice and administration of higher education. The Ed.D. degree, with specializations in higher education or higher education administration, is designed to appeal to students who currently work in college or university administration or related fields, and who want to become faculty members or who would like to move into higher-ranking administrative positions.

Post-Graduate Employment Opportunities

Faculty in higher education and student affairs programs; student affairs administrators; policy analysts; government relations; general university administrators; athletic administrators.

Post-Graduate Career Placements

Vice-president for student affairs; faculty at research universities; university provost; community college president; assistant director of recreation; academic coordinator.

Faculty

Alton Jamison, Milton Lang, Xyanthe Neider, Paul Pitre, Jason Sievers, Patricia Sturko, Kelly Ward and Christian Wuthrich.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.

- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.

- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.

- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDRES

- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).

The Higher Education Administration Program offers five graduate degrees: Master of Arts (M.A.), specializing in higher education administration; Master of Education (Ed.M.), specializing in higher education administration; Doctor of Education (Ed.D.), specializing in community; college leadership; Doctor of Education (Ed.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in student affairs; As a graduate student, the College of Education's undergraduate leadership studies minor (with 100 to 150 undergraduate students) provides you with both research and teaching opportunities. In addition, other partnerships with university student affairs units provide further opportunities tied to the students' educational

pursuits. Cleveland Hall is home to the George B. Brain Education Library, providing you with access to their main collection of education-related materials, a separate children's literature section, a media center, and a workroom.

Degree Description

The higher education program is dedicated to meeting students' needs as current and future leaders and faculty in colleges, universities, or in athletic programs throughout the country. The program provides a balance and integration of research, theory, policy, and practical experience. Students examine the range of historical, social, legal, political, economic, and ethical issues that impact the practice and administration of higher education. The Ph.D. degree, with specializations in higher education, student affairs, or higher education administration, is designed to appeal to students who currently work in college or university administration or related fields, and who want to become faculty members or who would like to move into higher-ranking administrative positions.

Post-Graduate Employment Opportunities

Faculty in higher education and student affairs programs; student affairs administrators; policy analysts; government relations; general university administrators; athletic administrators.

Post-Graduate Career Placements

Vice-president for student affairs; faculty at research universities; university provost; community college president; assistant director of recreation; academic coordinator.

Faculty

Alton Jamison, Milton Lang, Xyanthe Neider, Paul Pitre, Jason Sievers, Patricia Sturko, Kelly Ward and Christian Wuthrich.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.

- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.

- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDPSY

- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction; application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.
- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDRES

- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.

- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

Higher Education

Degree offered: Master of Arts in Education

Faculty working with graduate students: 8

Graduate students: 9

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Deadline: Fall: January 10

Spring: September 1

Program Description

The graduate degree program in Higher Education Administration includes preparation at the master's and doctoral levels for students who plan to achieve positions of leadership in higher education administration and related fields or who wish to become faculty members. The Ph.D. in education offers specializations in higher education administration or student affairs. The Higher Education Administration Program offers five graduate degrees: Master of Arts (M.A.), specializing in higher education admin-

istration; Master of Education (Ed.M.), specializing in higher education administration; Doctor of Education (Ed.D.), specializing in community; college leadership; Doctor of Education (Ed.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in student affairs; As a graduate student, the College of Education's undergraduate leadership studies minor (with 100 to 150 undergraduate students) provides you with both research and teaching opportunities. In addition, other partnerships with university student affairs units provide further opportunities tied to the students' educational pursuits. Cleveland Hall is home to the George B. Brain Education Library, providing you with access to their main collection of education-related materials, a separate children's literature section, a media center, and a workroom.

Degree Description

The higher education program is dedicated to meeting students' needs as current and future leaders and faculty in colleges, universities, or in athletic programs throughout the country. The program provides a balance and integration of research, theory, policy, and practical experience. Students examine the range of historical, social, legal, political, economic, and ethical issues that impact the practice and administration of higher education. The M.A. in higher education is recommended for students who plan to continue work at the doctoral level.

Post-Graduate Employment Opportunities

Faculty in higher education and student affairs programs; student affairs administrators; policy analysts; government relations; general university administrators; athletic administrators.

Post-Graduate Career Placements

Vice-president for student affairs; faculty at research universities; university provost; community college president; assistant director of recreation; academic coordinator.

Program Description

The graduate degree program in Higher Education Administration includes preparation at the master's and doctoral levels for students who plan to achieve positions of leadership in higher education administration and related fields or who wish to become faculty members. The Ph.D. in education offers specializations in higher education administration or student affairs. The Higher Education Administration Program offers five graduate degrees: Master of Arts (M.A.), specializing in higher education administration; Master of Education (Ed.M.), specializing in higher education administration; Doctor of Education (Ed.D.), specializing in community; college leadership; Doctor of Education (Ed.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in higher education administration; Doctor of Philosophy (Ph.D.), specializing in student affairs; As a graduate student, the College of Education's undergraduate leadership studies minor (with 100 to 150 undergraduate students) provides you with both research and teaching opportunities. In addition, other partnerships with university student affairs units provide further opportunities tied to the students' educational pursuits. Cleveland Hall is home to the George B. Brain Education Library, providing you with access to their main collection of education-related materials, a separate children's literature section, a media center, and a workroom.

Degree Description

The higher education program is dedicated to meeting students' needs as current and future leaders and faculty in colleges, universities, or in athletic programs throughout the country. The program provides a balance and integration of research, theory, policy, and practical experience. Students examine the range of historical, social, legal, political, economic, and ethical issues that impact the practice and administration of higher education. The Ed.M. in higher education is designed to prepare students to assume administrative roles within colleges and universities.

Post-Graduate Employment Opportunities

Faculty in higher education and student affairs programs; student affairs administrators; policy analysts; government relations;

general university administrators; athletic administrators.

Post-Graduate Career Placements

Vice-president for student affairs; faculty at research universities; university provost; community college president; assistant director of recreation; academic coordinator.

Faculty

Alton Jamison, Milton Lang, Xyanthe Neider, Paul Pitre, Jason Sievers, Patricia Sturko, Kelly Ward and Christian Wuthrich.

ED AD

- 501 Philosophy of Education 3** Development of American educational philosophy.
- 503 Values and Ethics for Educational Leaders 3** Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 Social Context of Education 2** The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 Social Foundations of Education 3** Educational adaptations to the economic and social trends and forces.
- 510 Improvement of Instruction 3** Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 Leadership Studies for Social Justice 3** Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 Organizational Behavior 3** Human behavior within various social and cultural organizational settings.
- 514 Basic Principles of Curriculum Design V 2-3** The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 Curriculum Implementation 3** Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 Instructional and Curricular Leadership V 2-3** Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.
- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.

- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.

- 565 Practicum in Higher Education 3** (0-9) Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V** 1-6 May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.
- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V** 1-6 May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V** 1-18 May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V** 1-18 May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V** 1-18 May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.
- EDPSY**
- 502 Theoretical Foundations of Learning and Instruction 3** Historical and contemporary theories of learning and instruction: application of theory in counseling and teaching settings.
- 503 Advanced Educational Psychology 3** Contemporary theories, models, and empirical research in educational psychology.
- 504 Classroom-focused Research Methods 2** Methods, design, implementation, and application of results in classroom context.
- 505 Research Methods I 3** Research methods; literature review; design, implementation, and interpretation of results.

- 508 Educational Statistics 3** Introductory course for graduate students in applied statistics for the behavioral sciences. Recommended preparation: ED PSYCH 505.
- 509 Educational Measurements: Test Development and Assessment V 2-3** Theory and use of standardized educational measurement instruments; intelligence, aptitude, and achievement tests; measurement of outcomes.
- 510 Assessment of Learning 3** Assessment of student learning, school and district evaluation; particularly appropriate for school administrators.
- 511 Classical and Modern Test Theory 3** Course Prerequisite: ED PSYCH 508; ED PSYCH 509. Large-scale educational assessment and test development and evaluation; history and policy uses of achievement tests.
- 521 Topics in Educational Psychology V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of educational psychology.
- 563 Principles of Research 3** The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).
- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 568 Quasi-Experimental Design 3** Course Prerequisite: ED PSYCH 505; ED RES 565. Integration and application of research skills in writing proposals, dissertations, papers for publication; interpreting, critiquing, and synthesizing research studies.
- 569 Seminar in Quantitative Techniques in Education V 2-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 565. Application of parametric and nonparametric statistics, data processing using computer packages in educational research.
- 570 Introduction to Program Evaluation 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to strategies and techniques for evaluation of educational and social programs.
- 571 Advanced Program Evaluation 3** Course Prerequisite: ED PSYCH 570. Advanced methods and techniques of program evaluation.
- 572 Introduction to Systematic Literature Reviews and Meta-Analyses 3** Introduction to the steps involved in conducting systematic reviews and meta-analyses.
- 573 Motivation Theories 3** Antecedents, consequences, and processes of motivated behavior examined from theoretical, empirical, and applied perspectives.
- 574 Seminar in Educational Psychology 1** May be repeated for credit; cumulative maximum 8 hours. Course Prerequisite: Graduate student in Educational Psychology. Reading and discussion of papers in the educational psychology literature and the presentation of student's work.
- 597 Educational Psychology Internship V 2-4** May be repeated for credit; cumulative maximum 8 hours. Supervised internship experience in educational psychology, measurement and evaluation.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

Higher Education

Degree offered: Master of Education

Faculty working with graduate students: 8

Graduate students: 19

Tests required: GRE (Combined), GRE (Quantitative), GRE (Verbal)

Faculty

Alton Jamison, Milton Lang, Xyanthe Neider, Paul Pitre, Jason Sievers, Patricia Sturko, Kelly Ward and Christian Wuthrich.

ED AD

- 501 **Philosophy of Education** 3 Development of American educational philosophy.
- 503 **Values and Ethics for Educational Leaders** 3 Study of ethical theories, the moral dilemmas of public schooling, and the skills of ethical reasoning; professional code of ethics.
- 506 **Social Context of Education** 2 The interpretation of social context issues including historical, legal and cultural factors as these influence policies and practice in education.
- 507 **Social Foundations of Education** 3 Educational adaptations to the economic and social trends and forces.
- 510 **Improvement of Instruction** 3 Analysis and evaluation of instructional models with emphasis on information processing; implications for changing teaching style.
- 512 **Leadership Studies for Social Justice** 3 Leadership theories and approaches including present educational problems, leadership theories, and perspectives.
- 513 **Organizational Behavior** 3 Human behavior within various social and cultural organizational settings.
- 514 **Basic Principles of Curriculum Design** V 2-3 The application of theoretical concepts and approaches in the planning and design of curricula.
- 515 **Curriculum Implementation** 3 Research and practice; innovation and change in curricular organization emphasizing implementation.
- 516 **Instructional and Curricular Leadership** V 2-3 Theory, research, and practice of providing instructional and curricular leadership in schools and other educational settings.

- 518 Media Literacy and Educational Technology 3** Relates research and theory of media literacy to instructional resources and current leadership practices; problems of planning and administering programs.
- 520 Seminar in Curriculum and Instruction V 2-3** Contemporary issues, analyses and developments of educational programs.
- 521 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and/or applications in selected areas of education.
- 522 Topics in Education V 1-4** May be repeated for credit; cumulative maximum 6 hours. Recent research, developments, issues, and /or applications in selected areas of education.
- 531 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 532 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 534 Special Topics 1** May be repeated for credit; cumulative maximum 3 hours. Topical issues in education responding to shifting demands and skills needed by parents, teachers, school administrators and community leaders.
- 536 Introduction to Qualitative Research in Education 3** Course Prerequisite: ED PSYCH 505 or ED RES 563. Introduction to the theory and methods of qualitative research; field relations, data collections, data analysis, hypothesis development, and theory generation.
- 537 Advanced Qualitative Research in Education 3** Course Prerequisite: ED RES 564 or ED AD 536. Advanced theory and methods of qualitative research; theoretical foundations, data collection and analysis, and reporting.
- 538 Special Topics in Qualitative Research in Education V 1-3** May be repeated for credit; cumulative maximum 6 hours. Course Prerequisite: ED RES 564 or ED AD 536.
- 539 Applied Research for Educational Leaders 3** Integrates the principles, skills, and tools of research into the leadership and managerial practices of educational leaders.
- 560 Student Personnel Services in Higher Education V 2-3** Philosophy, structure, functions, and organization of student affairs administration.
- 561 Introduction to College Student Development 3** Student development theory, related research and the application of theory to practice in student affairs work.
- 562 Professional Issues in Student Affairs Administration 3** Course Prerequisite: ED AD 560; ED AD 561. The organization, programs and professional issues related to selected student affairs programs and units.
- 563 Research in College Student Development 3** Course Prerequisite: ED AD 561; admission to EdD program. Critique, understand, and apply college social identity models as they relate to teaching, advising, and working with diverse student populations.
- 565 Practicum in Higher Education 3 (0-9)** Course Prerequisite: Graduate student with 15 hours of completed course work in TCH LRN, ED AD, ED PSYCH, or ED RES courses. Selected supervised experiences in general higher education and student affairs settings provide for the investigation/application of theory/methods gained through formal course work.
- 567 Diversity in Higher Education 3** Reflection on experience and examination of the theory of practice or organizational leadership in the context of diversity.
- 568 Finance and Budgeting in Higher Education 3** Course Prerequisite: By instructor permission. Exposes students to the fundamentals of higher education budgeting and finance.
- 570 Community and Technical Colleges 3** For teachers and administrators. Development and function of community and technical colleges.
- 571 College Teaching 3** Concepts, principles, issues, and procedures in college curriculum development, and college teaching.
- 572 History of Higher Education 3** History, philosophy, objectives, and issues of colleges and universities as social institutions.
- 573 Issues in Higher Education 3** Selected contemporary issues in higher education.
- 578 Higher Education Law and Ethics 3** Legal and ethical aspects of higher education with special reference to administrators, faculty, and students in higher education institutions.
- 579 Administration of Higher Education 3** Organization, administration and leadership of universities, colleges, and community colleges.
- 580 School Organization and Administration 3** Readings and discussions on the theories and practices of school organization and administration.
- 581 Politics in Education 3** Examining the intrapersonal, organizational politics and political dilemma, particularly as they pertain to marginalized groups.
- 582 Policy Formation and Analysis in Education 3** Political and organizational policy formation processes in educational organizations; policy analysis in education.
- 583 Community and Communications 3** Social, political, and economic relationships between education and the community; methods of public polling and campaign strategy techniques.
- 584 Human Resource Management 3** Human relations in education; problems involved and practical solutions considered.
- 585 Financial Management in Education 3** Economics and financing of education; financial planning, budget development, investment analysis, bonding, cost effectiveness; current trends in educational finance.
- 587 Seminar in School Administration V 1-6** May be repeated for credit; cumulative maximum 6 hours. Interdisciplinary seminars; related studies; discussions in several areas by specialists.

- 588 The Law and Education 3** Fundamental legal principles within which public education functions; applicable school codes of Washington and other states; review important court cases.
- 589 Leadership Development Seminar 3** Improving knowledge and skills in strategic planning, decision making, leadership issues, conflict, motivation, staff development, productivity, and stress.
- 590 Internship V 1-6** May be repeated for credit; cumulative maximum 12 hours. Course Prerequisite: By interview only. Internship in professional positions.
- 596 Preparing Grant Proposals 3** Identification of funding sources; analysis, evaluation, and production of grant proposals.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
- 702 Master's Special Problems, Directed Study, and/or Examination V 1-18** May be repeated for credit. Independent research in special problems, directed study, and/or examination credit for students in a non-thesis master's degree program. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 702 credit.
- 800 Doctoral Research, Dissertation, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their doctoral research, dissertation and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 800 credit.

EDRES

- 562 Epistemology, Inquiry, and Representation 3** Course Prerequisite: Doctoral standing in education; ED PSYCH 505 or concurrent enrollment. Epistemological assumptions and methodological strategies of research.
- 563 Principles of Research 3** Course Prerequisite: COUN PSY 501, ED RES 562, or admission to EdD program. The centrality of literature review and the understanding of methods used in educational research; practice in designing research questions. (Cross-listed course offered as ED RES 563, ED PSYCH 563).

- 564 Qualitative Research 3** Course Prerequisite: ED RES 563. Theoretical underpinnings of qualitative research; familiarity with published qualitative research in education; practical research skills. (Cross-listed course offered as ED RES 564, ED PSYCH 564).
- 565 Quantitative Research 3** Course Prerequisite: ED PSYCH 508; ED RES 563. Statistical literacy in educational research; parametric and non-parametric methods. (Cross-listed course offered as ED RES 565, ED PSYCH 565).
- 566 Research Seminar 1** May be repeated for credit; cumulative maximum 4 hours. Course Prerequisite: Doctoral standing in Education. Presentation and analysis of research; professional development in research presentation.
- 567 Discourse Analysis 3** Course Prerequisite: ED RES 562; ED RES 564. Examination of and preparation for discourse analysis research approach.
- 568 Critical Ethnography 3** Course Prerequisite: ED RES 562; ED RES 564. In-depth focus on issues in qualitative research and ethnography and critical ethnography.
- 569 Arts-Informed Perspectives in Educational Research 3** Course Prerequisite: ED RES 562; ED RES 564. Exploration and application of alternative forms of qualitative research and representation through the arts.
- 570 Action Research 3** Philosophical assumptions and methodological strategies of action research; theoretical and practical foundations for conducting action research studies in schools and other organizations.
- 571 Doctoral Dissertation Preparation 3** Conceptualization and development of a structured dissertation prospectus; socializes students to academic culture.

History

Degree offered: Doctor of Philosophy (History)

Faculty working with graduate students: 24

Graduate students: 37

Graduate students receiving assistantships or scholarships: 72%

Tests required: GRE (Combined), TOEFL

Deadline: Fall: January 10

Spring: November 1

Requirements

Total of 72 credit hours (graded + ungraded) required for degree. Dissertation requires oral examination. Must pass a foreign language competency exam by the 3rd semester of degree program. Minimum of 6 credits in coursework from one or two disciplines outside of history as a minor.

Program Description

The Department of History at Washington State University offers graduate study leading to the Master of Arts (in both thesis and non-thesis options) and Doctor of Philosophy degrees. Our graduate program in history seeks to train professional researchers who are competent in historical theory and methods

and prepares students for careers in historical research, public history, and teaching at colleges and universities. Specialized areas of study within the History Department include United States, early modern Europe, modern Europe, modern East Asia, environment, women, public, and world. Our department has long been recognized for its premiere graduate program in the American West—a region rich in cultural, social, and environmental diversity—as well as for its public history program. It also offers a unique pioneering program designed to grant a PhD in the field of world history.

Degree Description

The History Department offers programs of study for full time and part-time students leading to a Doctor of Philosophy (Ph.D.) degree. Students entering the Ph.D. program in History are expected to have completed a Master's degree in History or in a related field of study at an accredited college or university, and to show promise of doing excellent work at the doctoral level. All doctoral candidates conduct independent research leading to a written dissertation, with the objective of making a major contribution to the body of academic knowledge in History. Research will be focused on a specific Primary Field, which is embedded in a broader General Field that gives a geographical, chronological, and historiographical framework for the research. The student will also have a Comparative Field to provide a spatial and temporal context to the research. The program will culminate with a final oral examination. Financial aid in the form of an assistantship is available for dedicated, quality full time Ph.D. students.

Training and Professional Development Opportunities

History Dept has a committee dedicated to Graduate Professional Development. History grad students also organize a weekly colloquium in addition to weekly meetings of the History Graduate Students Association (HGSA). The HIST 595 course gives students knowledge and practice for teaching in higher education.

Post-Graduate Employment Opportunities

Students receiving a Doctor of Philosophy in History can go on to work with museums and curation, teach in secondary or higher education, and work as a historian at both private and governmental organizations providing research and cultural resource management expertise as well as litigation support.

Post-Graduate Career Placements

Tenured and adjunct faculty at research universities; chairs and deans of universities and community colleges; head librarians; self-employed researchers; historian for the NASA Johnson Space Center; president of a private historical organization.

HIST

- 509 Field Course: Foundations in US History 3** May be repeated for credit; cumulative maximum 12 hours. Chronological readings in US history.
- 510 Field Course in American History 3** May be repeated for credit. Readings and interpretive problems of American history.
- 511 American Diplomatic History, 1776-1914 3** Policies and principles characteristic of American diplomacy from 1776 to 1914. Credit not granted for both HISTORY 411 and HISTORY 511.
- 512 American Diplomatic History in the 20th Century 3** Credit not granted for both HISTORY 412 and HISTORY 512.
- 513 Theory and Method in American Studies 3** Major theories and methods currently used by American studies scholars; key concepts in cultural analysis. (Cross-listed course offered as AMER ST 513, ENGLISH 513, HISTORY 513).
- 515 Jeffersonian-Jacksonian America 3** Social and political history of the United States from 1789 to 1845; Jeffersonian and Jacksonian eras. Credit not granted for both HISTORY 415 and HISTORY 515.
- 516 Civil War and Reconstruction 3** The Civil War as a problem in historical causation and social, political, and economic impact of the war. Credit not granted for both HISTORY 416 and HISTORY 516.
- 517 Rise of Modern America 3** Response to industrialism in the Gilded Age and the reform movements of Populism and Progressivism. Credit not granted for both HISTORY 417 and HISTORY 517.
- 518 United States, 1914-1945 3** America through World War I, cultural tensions of the Twenties, and the crises of Depression and WWII. Credit not granted for both HISTORY 418 and HISTORY 518.
- 519 United States, 1945-Present 3** International and domestic impact of the Cold War, era of McCarthyism, American aspirations, tensions and conflicts in the post-industrial era. Credit not granted for both HISTORY 419 and HISTORY 519.
- 520 Field Course in the American West 3** May be repeated for credit; cumulative maximum 9 hours. Readings and interpretive problems in the history of the American West.
- 521 The American West 3** Multicultural exploration of the frontier experience and western America; environment, economic development, gender, class and race emphasized. (Cross-listed course offered as HISTORY 421, WOMEN ST 421).

- 522 History of the Pacific Northwest 3** Political, social economic and environmental history of the Pacific Northwest. Fulfills the teaching certification requirement for Washington state history. Credit not granted for both HISTORY 422 and HISTORY 522.
- 523 Radicals, Reformers, and Romantics: The Impact 3** Changing thought and its impact in the United States from colonial times to the present. Credit not granted for both HISTORY 423 and HISTORY 523.
- 524 Seminar in the American West 3** May be repeated for credit; cumulative maximum 9 hours. Research seminar in the history of the American West.
- 525 Seminar in American History 3** May be repeated for credit.
- 527 Public History: Theory and Methodology 3** An introduction to the broad range of non-traditional careers in history. Credit not granted for both HISTORY 427 and HISTORY 527.
- 528 Seminar in Public History 3** May be repeated for credit; cumulative maximum 6 hours. The development of skills at the graduate level to be used in nontraditional careers for historians.
- 529 Interpreting History through Material Culture 3** May be repeated for credit; cumulative maximum 6 hours. Historical interpretation to work on major historic preservation and museum projects.
- 530 History of Mexico 3** War of independence, 19th century Mexico and the liberal-conservative struggle; modern Mexico since the Revolution of 1910. Credit not granted for both HISTORY 430 and HISTORY 530.
- 532 20th Century Latin America 3** Contemporary developments, policies and trends in the Latin American states. Credit not granted for both HISTORY 432 and HISTORY 532.
- 533 History of Cuba and the Caribbean 3** Historical development of the Caribbean, with emphasis on Cuba, from the Spanish arrival to Castro's revolution. Credit not granted for both HISTORY 433 and HISTORY 533.
- 534 Revolution in Latin America 3** Social and political development in Central America; reasons for dictatorships and revolutionary movements; comparison with other Latin American regions. Credit not granted for both HISTORY 434 and HISTORY 534.
- 535 Field Course in Latin American History 3** May be repeated for credit; cumulative maximum 9 hours. Readings and interpretive problems in Latin American history.
- 539 Slavery, Abolition and Emancipation in World History 3** History of slavery and abolition as a world-wide phenomena; trends and debates in historiographical literature. Credit not granted for both HISTORY 439 and HISTORY 539.
- 540 Seminar in History 3** May be repeated for credit.
- 547 Europe in the French Revolutionary and Napoleonic Era, 1789 to 1815 3** Credit not granted for both HISTORY 447 and HISTORY 547.
- 549 Europe and Two World Wars, 1914-1945 3** Political, intellectual, economic, and international aspects of European life during and between two world wars. Credit not granted for both HISTORY 449 and HISTORY 549.
- 550 Europe Since 1945 3** Europe from the end of World War II to the present; the Cold War, European integration, social and intellectual life. Credit not granted for both HISTORY 450 and HISTORY 550.
- 553 Conservatism, Liberalism, and Socialism: Europe, 1815-1870 3** The consolidation of industrial society and the nation-state in 19th-century Europe. Credit not granted for both HISTORY 453 and HISTORY 553.
- 554 Nationalism and National Conflict: Europe, 1870-1914 3** The rise of Europe to world predominance and the crisis of the European order. Credit not granted for both HISTORY 454 and HISTORY 554.
- 559 Modern Britain 3** Britain and the Empire from the Napoleonic wars to the present. Credit not granted for both HISTORY 459 and HISTORY 559.
- 560 Field Course in Early European History 3** May be repeated for credit; cumulative maximum 9 hours. Readings and issues in early European history.
- 561 Field Course in Early Modern European History 3** Readings and interpretive problems in early modern European history (1450 - 1750).
- 562 History of Imperial Russia 3** History and culture of Imperial Russia from Peter the Great to the 1905 revolution. (Cross-listed course offered as HISTORY 462, RUSSIAN 462).
- 563 History of the Soviet Union 3** The Russian revolutions and the Soviet regime: 1905 to the present. (Cross-listed course offered as HISTORY 463, RUSSIAN 463).
- 564 Comparative Genocide 3** Study of the concepts, history, and consequences of genocide in the global perspective through theoretical and case study analysis. Credit not granted for both HISTORY 464 and HISTORY 564.
- 567 Modern France 3** The history of France from the revolution of 1789 to the present. Credit not granted for both HISTORY 467 and HISTORY 567.
- 568 Hitler and Nazi Germany 3** Origins and rise of Nazism; state, society and culture in the Third Reich; Nazi racial ideology; world war; the Holocaust. Credit not granted for both HISTORY 468 and HISTORY 568.
- 569 Field Course in Modern European History 3** May be repeated for credit; cumulative maximum 9 hours. Readings and interpretive problems in modern European history.
- 570 World History Theory and Methods 3** May be repeated for credit; cumulative maximum 9 hours. Historiographic overview of the field of world history.
- 571 Topics in World History 3** May be repeated for credit; cumulative maximum 6 hours. Readings in themes and literature of a global approach to history.
- 572 The Middle East Since World War I 3** Developments in the Middle East since World War I including nationalism, fundamentalism, and revolution. (Cross-listed course offered as HISTORY 472, ASIA 472).
- 573 Field Course in African History 3** May be repeated for credit; cumulative maximum 6 hours. Readings and interpretive problems in African history.

- 574 Modern South Asia: Community and Conflict 3** Historical transformation of communities and communal conflicts in modern South ASIA from 1500 to present; themes: caste, religion, geography, environment and economy. (Cross-listed course offered as HISTORY 474, ASIA 474).
- 575 Field Course in Women's History 3** May be repeated for credit; cumulative maximum 6 hours. Readings and interpretive problems in women's history.
- 576 Revolutionary China, 1800 to Present 3** Continuity and change in the political, social, cultural and economic experience of China since 1800. (Cross-listed course offered as HISTORY 476, ASIA 476, POL S 476).
- 577 Modern Japanese History 3** Examination of political, socioeconomic and cultural changes and the international crises in modern Japan since the 19th century. (Cross-listed course offered as HISTORY 477, ASIA 477).
- 578 Field Course in Asian History 3** May be repeated for credit; cumulative maximum 9 hours. Readings and interpretive problems in Asian history.
- 580 Historiography 3**
- 595 The Teaching of History in College 3** Theory, problems, and methods of teaching history at the college level.
- 596 Topics in American Studies 3** May be repeated for credit; cumulative maximum 9 hours. American Studies Summer Institute. (Cross-listed course offered as AMER ST 596, HISTORY 596). Credit not granted for both HISTORY 496 and HISTORY 596.
- 597 Seminar in History V 2-3** May be repeated for credit.
- 598 History Internship V 1-12** May be repeated for credit; cumulative maximum 12 hours. Participation as intern in public or private sectors. Credit not granted for both HISTORY 498 and HISTORY 598.
- 599 History Colloquium 1** May be repeated for credit; cumulative maximum 4 hours. Weekly discussions and presentations on historical topics or current faculty and graduate student research.
- 600 Special Projects or Independent Study V 1-18** May be repeated for credit. Independent study, special projects, and/or internships. Students must have graduate degree-seeking status and should check with their major advisor before enrolling in 600 credit, which cannot be used toward the core graded credits required for a graduate degree.
- 700 Master's Research, Thesis, and/or Examination V 1-18** May be repeated for credit. Independent research and advanced study for students working on their master's research, thesis and/or final examination. Students must have graduate degree-seeking status and should check with their major advisor/committee chair before enrolling for 700 credit.
